### What's in the Release Notes

The release notes cover the following topics:

- [What's New VMware vRealize Operations Management Pack for VMware Site Recovery Manager 8.2.1](#)
- [About the VMware vRealize Operations Management Pack for VMware Site Recovery Manager 8.2.1](#)
- [Installation and Configuration](#)
- [Network Ports](#)
- [Caveats and Limitations](#)
- [Known Issues](#)

### What's New VMware vRealize Operations Management Pack for VMware Site Recovery Manager 8.2.1

The vRealize Operations Management Pack for VMware Site Recovery Manager 8.2.1 provides bug fixes and security fixes.

### About the VMware vRealize Operations Management Pack for VMware Site Recovery Manager 8.2.1

The VMware vRealize Operations Management Pack for VMware Site Recovery Manager 8.2.1 allows VMware administrators to monitor the local Site Recovery Manager Windows services in VMware vRealize Operations Manager. The vRealize Operations Management Pack for VMware Site Recovery Manager provides capabilities for monitoring the connectivity between Site Recovery Manager instances, the availability of a remote Site Recovery Manager instance, and the status of protection groups and recovery plans in Site Recovery Manager. Alarms are generated when there are Site Recovery Manager Server connectivity issues encountered or protection groups and recovery plans are in error state. The user interface provides statistics for the number of SRM-related objects and how many of them have errors.

The vRealize Operations Management Pack for VMware Site Recovery Manager 8.2.1 release runs with VMware vRealize Operations Manager 7.5 or 8.0. For more information on interoperability with earlier or later releases of VMware vRealize Operations Manager, see the [VMware Product Interoperability Matrices](#).

You can download the vRealize Operations Management Pack for Site Recovery Manager 8.2.1 from the [download](#) page.

### Installation and Configuration

The VMware vRealize Operations Management Pack for VMware Site Recovery Manager 8.2.1 software requires VMware vRealize Operations Manager 7.5 or 8.0.x, and Site Recovery Manager 8.2.1. For information on installing VMware vRealize Operations Manager 8.0, see [Installing vRealize Operations Manager](#) in the vRealize Operations Manager documentation. For information on installing Site Recovery Manager 8.2.1, see [Installing Site Recovery Manager](#) in the VMware Site Recovery Manager documentation.

The VMware vRealize Operations Management Pack for Site Recovery Manager 8.2.1 software is distributed as PAK file. You install and configure the management pack by using the vRealize Operations Manager interface.

1. Log in to vRealize Operations Manager.
2. Select **Administration** > **Solutions** > **Repository** in the left pane.
3. Click **Add a Management Pack**.
4. Navigate to the `VMware-srm-vrops-mp-8.2.1-<build number>.pak` file and click **Upload**. When the PAK file is uploaded, click

After the installation you must configure the VMware vRealize Operations Management Pack for Site Recovery Manager 8.2.1 so that vRealize Operation Manager can collect data from the target system. The minimum role required to collect data is **Ready-only**. For more information on roles and permissions, see [Site Recovery Manager Privileges, Roles, and Permissions](#) and [vCenter Server System Roles](#).

- 1. Select **Administration > Solutions > Configuration** in the left pane.
- 2. On the **Configuration** tab, select Srm Adapter, and click **Configure** on the toolbar.
- 3. Enter the required information in the Manage Solutions wizard and click **Save Settings**.

Network Ports

VMware vRealize Operations Management Pack for Site Recovery Manager requires certain ports to be open. If you are connecting to the Site Recovery Manager virtual appliance, the management pack uses port 443 (HTTPS protocol). If you are connecting to Site Recovery Manager for Windows, by default the management pack uses port 9086 (HTTPS protocol).

Caveats and Limitations

- Restarting the Site Recovery Manager services during the first collection cycle of vRealize Operations Manager results in dashboard widgets not working. If this happens, you must re-install the Site Recovery Manager adapter or adapters.
- Storage policy protection groups (SPPG) and SPPG-related information such as objects, inventory tree, and metrics are not reflected in vRealize Operations Manager.

Known Issues

- **The Site Recovery Manager topology graph widget might be loading slowly after the SRM adapter is deployed**  
When you open the Site Recovery Manager topology graph widget, the configuration can take around 40 minutes.  
Workaround: None
- **Srm Configuration Summary does not always show Recovery Plans and Protection Groups pies**  
The Srm Configuration Summary does not always show Recovery Plans and Protection Groups pies.  
Workaround: Edit the Dashboard and choose Srm World object manually for each view, then save the dashboard.
