About This Release

VMware Site Recovery Manager 8.3.1.7 is a minor product patch release that provides bug fixes. The content of the [VMware Site Recovery Manager 8.3.1 Release Notes](#) and all following 8.3.1.x patch release notes applies to this version as well.

What's New

- Updated Spring Framework to version 5.2.20.

Installation and Upgrade

For the supported upgrade paths for Site Recovery Manager, select **Upgrade Path** and **VMware Site Recovery Manager** in the [VMware Product Interoperability Matrices](#).

If you are running Site Recovery Manager 8.3.1.x, upgrade to Site Recovery Manager 8.3.1.7. See [Upgrading Site Recovery Manager](#) in *Site Recovery Manager 8.4 Installation and Configuration* for instructions about upgrading Site Recovery Manager.

If you use vSphere Replication with Site Recovery Manager 8.3.1.x, upgrade the vSphere Replication appliance to version 8.3.1.7. See the [vSphere Replication 8.3.1.7 Release Notes](#) for information about vSphere Replication 8.3.1.7.

Migration to Site Recovery Manager Virtual Appliance

You can migrate your Site Recovery Manager 8.3.x instance from Windows to the Site Recovery Manager Virtual Appliance. For information about the migration procedure, see [Migrate from Site Recovery Manager for Windows to Site Recovery Manager Virtual Appliance](#).

Resolved Issues

- **VM network stays disconnected after performing a test failover**

When the DSwitch UUID and the PortGroup key are the same for the source site and the target site, Site Recovery Manager does not reconfigure the virtual machine to put its NICs to the target network. As a result vCenter Server does not create DVport to the host and the VM network is disconnected after recovery.

This issue is fixed in Site Recovery Manager 8.3.1.7.
