Check for additions and updates to these release notes.

VMware vRealize Orchestrator Plug-In for Site Recovery Manager 8.3.1.3 is a minor product patch release. The content of VMware vRealize Orchestrator Plug-In for VMware Site Recovery Manager 8.3.1 Release Notes applies to this version as well.

What's in the Release Notes

The release notes cover the following topics:

- What's New in VMware vRealize Orchestrator Plug-In for VMware Site Recovery Manager 8.3.1.3
- Installation and Upgrade

What's New in VMware vRealize Orchestrator Plug-In for VMware Site Recovery Manager 8.3.1.3

- The VMware vRealize Orchestrator Plug-in for VMware Site Recovery Manager 8.3.1.3 release adds support for VMware vRealize Orchestrator 8.3

Installation and Upgrade

The Orchestrator plug-in for Site Recovery Manager software is distributed as an Orchestrator application file.

You must install and configure vRealize Orchestrator before you install the Orchestrator plug-in for Site Recovery Manager, see the *Installing and Configuring VMware vRealize Orchestrator 8.3* documentation.

For information about how to install the Orchestrator plug-in for Site Recovery Manager on VMware vRealize Orchestrator 8.3, see the *Install or Update a vRealize Orchestrator Plug-In* topic in the *VMware vRealize Orchestrator 8.3* documentation.

After you install the Orchestrator plug-in for Site Recovery Manager, you must configure the connection between the vRealize Orchestrator instance and the vCenter Server instance on your Site Recovery Manager site. For information about how to configure the connection with your vCenter Server, see the *VMware vRealize Orchestrator 8.3* documentation.

After you install the Orchestrator plug-in for Site Recovery Manager, you can find the Site Recovery Manager workflows in the vSphere Web Client:

1. Go to **vRealize Orchestrator** > **Workflows** view in the vSphere Web Client.
2. Expand the hierarchy to navigate to the **vRO Servers** > *vco_server* > **Library** > **SRM** folder.

Before you can run the Site Recovery Manager workflows, you must configure the plug-in to work with your Site Recovery Manager by selecting **Library** > **SRM > Configuration** and running the following workflows:

1. Run the **Configure Local Sites** workflow.
2. Run the **Configure Remote Site** workflow.
3. Run the **Login Remote Site** workflow.

You must run the Login Remote Site workflow once per Orchestrator Client session to log in to Site Recovery Manager on the remote site. The Orchestrator automatically logs out of Site Recovery Manager when you log out of the Orchestrator client.

For information about how to uninstall your Site Recovery Manager plug-in, see the *Delete a Plug-In* topic in the *Installing and Configuring VMware Realize Orchestrator* documentation and the following knowledge base article: https://kb.vmware.com/s/article/2151653, *Manually removing plug-ins from vRealize Orchestrator 7.3 and later.*
