

# VMware Site Recovery Manager 8.4.0.6 Release Notes

 Updated on 03/28/2023

Site Recovery Manager 8.4.0.6 | 30 MAR 2023 | Build 21409856 | [Download](#)

Check for additions and updates to these release notes.

## About This Release

VMware Site Recovery Manager 8.4.0.6 is a minor product patch release that provides bug fixes. The content of the [VMware Site Recovery Manager 8.4 Release Notes](#) and all following 8.4.0.x patch release notes applies to this version as well.

## What's New

- The VMware Site Recovery Manager 8.4.0.6 Express Patch provides bug fixes.
- Updated Spring Framework to version 5.2.20.

## Installation and Upgrade

For the supported upgrade paths for Site Recovery Manager, select **Upgrade Path** and **VMware Site Recovery Manager** in the [VMware Product Interoperability Matrices](#).

If you are running Site Recovery Manager 8.4.0.x, upgrade to Site Recovery Manager 8.4.0.6. See [Upgrading Site Recovery Manager](#) in *Site Recovery Manager 8.4 Installation and Configuration* for instructions about upgrading Site Recovery Manager.

If you use vSphere Replication with Site Recovery Manager 8.4.0.x, upgrade the vSphere Replication appliance to version 8.4.0.6. See the [vSphere Replication 8.4.0.6 Release Notes](#) for information about vSphere Replication 8.4.0.6.

## Migration to Site Recovery Manager Virtual Appliance

You can migrate your Site Recovery Manager 8.3.x instance from Windows to the Site Recovery Manager Virtual Appliance. For information about the migration procedure, see [Migrate from Site Recovery Manager for Windows to Site Recovery Manager Virtual Appliance](#).

## Resolved Issues

- **VM network stays disconnected after performing a test failover**

When the DSwitch UUID and the PortGroup key are the same for the source site and the target site, Site Recovery Manager does not reconfigure the virtual machine to put its NICs to the target network. As a result vCenter Server does not create DVport to the host and the VM network is disconnected after recovery.

This issue is fixed in Site Recovery Manager 8.4.0.6.

- **You receive a warning during storage configuration**

During the Storage Configuration step you receive the following warning: "Warning - Cannot complete the operation due to an incorrect request to the server." The warning appears if tags are not attached correctly to VMs. There is no impact on the virtual machine functionality, the VM boots fine and is accessible after performing a Test recovery or Disaster Recovery.

This issue is fixed in Site Recovery Manager 8.4.0.6.

- **After deploying the Site Recovery Manager appliance by using an OVF template, all the network information is missing**

When you power on the Site Recovery Manager appliance after deploying it by using an OVF template, all the network information is missing and you receive a 'NO NETWORKING DETECTED' error.

This issue is fixed in Site Recovery Manager 8.4.0.6

- **Downloading a support bundle fails with error code 401**

You are unable to download a Site Recovery Manager support bundle from any browser. The operation fails with 'Failed to load resource: the server responded with a status of 401 (Unauthorized)'.

This issue is fixed in Site Recovery Manager 8.4.0.6.

- **After performing a failover, the recovered virtual machine icon shows 3 dots**

This issue is fixed in Site Recovery Manager 8.4.0.6.
