

Release Notes for VMware Unified Access Gateway 3.2.1

Unified Access Gateway | Released on 13 FEB 2018

Check for additions and updates to these release notes.

What's in the Release Notes

The release notes cover the following topics:

- [What's New in This Release](#)
- [Known Issues](#)
- [Resolved Issues](#)
- [Internationalization](#)
- [Compatibility Notes](#)

What's New in This Release

VMware Unified Access Gateway 3.2.1 includes important security updates and bug fixes.

Resolved Issues

- Outbound RADIUS packets sometimes have the wrong source IP address in the outbound UDP/IP packet.
- Unable to process the RADIUS Access-Challenge that comes from the RSA Authentication Manager RADIUS server.
- After a JSON file is exported from Unified Access Gateway 3.1.1, user is unable to import the same file to later releases of Unified Access Gateway.

Known Issues

If you use a self-signed certificate on Unified Access Gateway, you may not be able to access the Horizon desktop with Microsoft Edge Browser.

Workaround: Use one of the following workarounds to resolve this issue:

1. Use a valid domain certificate.
2. Use port 443 for Blast external url. Do not use port 8443.

Internationalization

The Unified Access Gateway user interface, online help, and product documentation are available in Japanese, French, German, Spanish, Brazilian Portuguese, Simplified Chinese, Traditional Chinese, and Korean. For the complete documentation, go to the [Documentation Center](#).

Compatibility Notes

For more information about the VMware Product Interoperability Matrix, go to http://www.vmware.com/resources/compatibility/sim/interop_matrix.php.
