

Release Notes: Windows Sensor v6.1.13

November 2021

Summary

VMware Carbon Black EDR Windows Sensor v6.1.13 provides corrective content to previous 6.1.x Windows sensors. This sensor release also includes all changes and fixes from previous releases.

This document provides information for users upgrading to VMware Carbon Black EDR Windows Sensor v6.1.13 from previous versions as well as users new to Cb Response. The key information specific to this release is provided in the following major sections:

- **Installation Instructions** - Provides instructions for VMware Carbon Black EDR Windows sensor installation.
- **Corrective content** – Describes issues resolved by this release as well as more general improvements in performance or behavior.
- **Known issues and limitations** – Describes known issues or anomalies in this version that you should be aware of.

Server compatibility

VMware Carbon Black EDR sensors included with server releases are compatible with all server releases going forward. It is always recommended to use the latest server release with our latest sensors to utilize the full feature capabilities of our product, however, using earlier 6.x server versions with the latest sensor should not impact core product functionality.

Sensor operating systems

VMware Carbon Black EDR sensors interoperate with multiple operating systems. For the most up-to-date list of supported operating systems for VMware Carbon Black EDR sensors (and all VMware Carbon Black products), refer to the following location in the VMware Carbon Black User eXchange: <https://community.carbonblack.com/docs/DOC-7991>

Documentation

This document supplements other VMware Carbon Black documentation. Click [here](#) to search the full library of VMware Carbon Black EDR user documentation.

Technical support

VMware Carbon Black EDR server and sensor update releases are covered under the Customer Maintenance Agreement. Technical Support is available to assist with any issues that might develop during the installation or upgrade process. Our Professional Services organization is also available to assist to ensure a smooth and efficient upgrade or installation.

Carbon Black.

Note: Before performing an upgrade, Carbon Black recommends reviewing content on the User eXchange for the latest information that supplements the information contained in this document.

Installation Instructions

To install the sensors on to your server, run through the following instructions:

1. Ensure your VMW CB EDR YUM repo is set appropriately:
 - a. The VMW CB EDR repository file to modify is `/etc/yum.repos.d/CarbonBlack.repo`
 - b. Baseurl = [https://yum.distro.carbonblack.io/enterprise/stable/\\$releasever/\\$basearch/](https://yum.distro.carbonblack.io/enterprise/stable/$releasever/$basearch/)
2. On the VMW CB EDR server, clear the YUM cache by running the following command:
 - a. `yum clean all`
3. After the YUM cache has been cleared, download the sensor install package by running the following command:
 - a. Run `yum install --downloadonly --downloadaddir=<package local download directory> <package>`
 - i. **Note:** The `<package local download directory>` is a directory of your choice
 - ii. **Note:** `<package>` is replaced by `cb-sensor-6.1.13.15392-win`
4. Install the new sensor package on the VMW CB EDR server by running the command:
 - a. `rpm -i --force <package>`
5. Make the new installation package available in the server console UI by running the command:
 - a. `/usr/share/cb/cbcheck sensor-builds --update`
 - i. **Note:** If your groups have *Automatic Update* enabled, the sensors in that group will start to automatically update.

Your new sensor versions should now be available via the console. For any issues, please contact Carbon Black Technical Support.

Important Note: Installations and upgrades (as well as uninstallations and downgrades) of the sensor on Windows XP and Windows Server 2003 **will require a reboot** in order to properly load (or unload) our software drivers.

Carbon Black.

For all other Windows OS, it is always encouraged to conduct a reboot of the endpoint after installation (or restart) of our sensor to ensure the sensor properly captures the full historical data of all running processes and associated information.

Corrective Content

This release provides the following corrective content changes:

- .MSI installer will no longer use the `C:\Windows\Temp` folder. [CB-33714]
- Updated OpenSSL library to version 1.1.1k. [CB-34930]
- Fixed a bug with Isolated sensors losing communication with EDR Server. [CB-35466]
- 6.1.13+ EDR Windows sensor installers will not install on non-SHA2 patched Windows operating systems. Please see our [User Exchange](#) post for more information on our SHA2 requirement. [CB-35584]
- Updating publisher signing information from *Carbon Black* to *VMware*. [CB-36448]
- Updated Curl library to version 7.8. [CB-36812]

Known Issues and Limitations

Known issues associated with this version of the sensor are included below:

- **CB-32324: Disabling DNS Name Resolution For NetConn Events:** Versions of the sensor prior to 7.1.1 (and 6.1.12 for XP/Server2003) were susceptible to high CPU utilization in the IP Address-to-Hostname resolution functionality of the sensor. This issue has been addressed, however, this registry key will still disable IP address name resolution for customers who wish to do so. [CB-17552]:

```
[HKEY_LOCAL_MACHINE\SOFTWARE\CarbonBlack\config]
```

```
"DisableNetConnNameResolution"=dword:00000001
```

Contacting Support

Use one of the following channels to request support or ask support questions:

- **Web:** [User eXchange](#)
- **Email:** cb-support@vmware.com
- **Phone:** 877.248.9098

Reporting Problems

When contacting Carbon Black Technical Support, be sure to provide the following required information about your question or issue:

Carbon Black.

- **Contact:** Your name, company name, telephone number, and email address
- **Product version:** Product name (Carbon Black EDR server and sensor version)
- **Hardware configuration:** Hardware configuration of the Carbon Black EDR server (processor, memory, and RAM)
- **Document version:** For documentation issues, specify the version and/or date of the manual or document you are using
- **Problem:** Action causing the problem, error message returned, and event log output (as appropriate)
- **Problem severity:** Critical, serious, minor, or enhancement request
