About VMware Fusion 1

VMware Fusion® is the easiest, fastest, and most reliable way to run Windows and other x86 based operating systems on a Mac without rebooting.

For more information, see the broader VMware Fusion documentation.

System Requirements

2

- **Hardware**

  Intel Mac models that support macOS 11.0 Big Sur and newer versions.

  - Mac models that support macOS 11.0 Big Sur - https://support.apple.com/en-us/HT211238.

- **Software**

  macOS 11.0 Big Sur and newer versions.

What's New

3

This release contains bug fixes.

Prior Releases

4

Features and Known Issues from prior releases of VMware Fusion 12 are described in the release notes for each release. To view the release notes for a prior release, click the appropriate link:

- VMware Fusion 12.2.3
- VMware Fusion 12.2.1

Resolved Issues

5

- **The VMware Fusion mass deployment does not work**

  If the version of macOS is 12.3 or above, the VMware Fusion mass deployment on macOS fails. The issue appears because Apple removed the support for Python 2.7 from macOS 12.3 onwards.

  This issue is now resolved.
