

VMware HCX 4.1.0.2 Release Notes

Updated on: 13 Dec 2021

VMware HCX 4.1.0.2 | 13 Dec 2021 | Build 19053213 (Connector), Build 19053139 (Cloud)

Check for additions and updates to these release notes.

What's in the Release Notes

The release notes cover the following topics:

- [About VMware HCX](#)
- [What's New in this Release](#)
- [Upgrade Considerations](#)

About VMware HCX

VMware HCX delivers secure and seamless app mobility and infrastructure hybridity across both on-premises and in the cloud. HCX abstracts the distinct private or public vSphere resources and presents a Service Mesh as an end-to-end entity. The HCX Interconnect can then provide high-performance, secure, and optimized multi-site connectivity to achieve infrastructure hybridity and present multiple options for bi-directional virtual machine mobility with technologies that facilitate the modernization of legacy data centers.

For more information, see the [VMware HCX User Guide](#) in the VMware Documentation Center.

What's New in this Release

VMware HCX 4.1.0.2 patch is a Mandatory Security Update for all deployments running HCX 4.1.x. versions to address the security vulnerability documented in VMSA-2021-0028.

HCX Connector and HCX Cloud Manager systems must be upgraded. HCX Service Mesh appliances do not require upgrade.

Upgrade Considerations

Alternatively, an HCX deployment running a 4.1.x version can be upgraded to HCX 4.2.3 or later release. HCX Service Mesh appliances will require upgrade as well.

Upgrade compatibility information is available as a table in [VMware Product Interoperability Matrix - Upgrade Path](#).

For HCX upgrade procedures, see [Updating VMware HCX](#).
