## About Access Point 2.0.2

It is recommended that all Horizon DaaS Platform users with Access Point installed replace their current version with Access Point 2.0.2.

This version of Access Point includes a fix for an issue with the tunnel server, one of the subsystems of Access Point, which was not responding because of scalability and clean-up problems when 20 or more clients trying to connect through the tunnel server were blocked for any reason. This resulted in connection failures that required a restart of the Access Point to correct.

## Installation

### To install Access Point 2.0.2

1. Remove any existing Access Point OVA template in vSphere.
2. Set up Access Point 2.0.2 following the instructions in the *Horizon DaaS Platform 6.1 Access Point 2.0 Setup* document (available for download with Horizon DaaS 6.1.5 files).
