

# VMware NSX-T Data Center 2.5.2.1 Release Notes

VMware NSX-T Data Center 2.5.2.1 | 3 September 2020 | Build 16784095

Check regularly for additions and updates to these release notes.

## What's in the Release Notes

NSX-T Data Center 2.5.2.1 is an express patch release that comprises bug fixes only. See "Resolved Issues" below for the list of issues resolved in this release. See the [VMware NSX-T Data Center 2.5.2 Release Notes](#) for current known issues.

## Document Revision History

3 September 2020. First edition.

## Resolved Issues

- **Fixed Issue 2627281: When migrating from NSX-v to NSX-T, DFW IPFIX records contain truncated interface identifier.**  
Due to the truncated identifier, vRNI is unable to use the identifier to query the NSX-T Management Plane for additional information, such as DFW rules applied. vRNI features cannot be used due to lack of information from NSX-T objects.
- **Fixed Issue 2616617: ESXi host prepared for NSX-T may experience a PSOD under high DFW rule churn due to a race condition in the cleanup event of dependent addresssets.**  
ESXi hosts crash with a PSOD.
