About VMware Validated Design for Deployment Region A

1

VMware Validated Design Deployment for Region A provides step-by-step instructions for installing, configuring, and operating a software-defined data center (SDDC) based on the VMware Validated Design for Software-Defined Data Center.

VMware Validated Design Deployment for Region A does not contain step-by-step instructions for performing all of the required post-configuration tasks because they often depend on customer requirements.

Intended Audience

The *VMware Validated Design Deployment for Region A* document is intended for cloud architects, infrastructure administrators and cloud administrators who are familiar with and want to use VMware software to deploy in a short time and manage an SDDC that meets the requirements for capacity, scalability, backup and restore, and extensibility for disaster recovery support.

Required VMware Software

VMware Validated Design Deployment for Region A is compliant and validated with certain product versions. See *VMware Validated Design Release Notes* for more information about supported product versions.

Updated Information

This *Deployment for Region A* document is updated with each release of the product or when necessary.

This table provides the update history of the *Deployment for Region A* document.

Revision	Description
26 SEP 2017	<ul style="list-style-type: none">■ Step 4 was missing a dash for the parameter lb-fqdn in the command. See Step 4d■ Added domain field to vRealize Orchestrator server login steps. See:<ul style="list-style-type: none">■ Configure Embedded vRealize Orchestrator Server in Region A■ Validate the Configuration of vRealize Orchestrator in Region A■ Configure Authentication Provider for vRealize Orchestrator in Region A■ Added step to keep the vco-configurator service running after you restart the vRealize Automation Appliances. See Configure the Embedded vRealize Orchestrator in Region A.■ Added step for configuring uplinks for the sfo01-m01-vds01-uplink01 and sfo01-m01-vds01-uplink02 port groups. Each uplink group is connected only to a single physical NIC. See Create a vSphere Distributed Switch for the Management Cluster in Region A.■ Added step for configuring uplinks for the sfo01-w01-vds01-uplink01 and sfo01-w01-vds01-uplink02 port groups. Each uplink group is connected only to a single physical NIC. See Create a vSphere Distributed Switch for the Shared Edge and Compute Cluster in Region A.
22 AUG 2017	Initial Release

Region A Virtual Infrastructure Implementation

2

The Virtual Infrastructure in Region A is implemented through the following high level procedures.

Procedure

- 1 [Install and Configure ESXi Hosts in Region A](#) on page 9
Start the deployment of your virtual infrastructure by installing and configuring all the ESXi hosts in Region A.
- 2 [Deploy and Configure the Platform Services Controller and vCenter Server Components in Region A](#) on page 15
Deploy and configure the cluster components for both the management cluster and the shared edge and compute cluster.
- 3 [Deploy and Configure the Management Cluster NSX Instance in Region A](#) on page 42
This design uses two separate NSX instances per region. One instance is tied to the Management vCenter Server, and the other instance is tied to the Compute vCenter Server. Deploy and configure the NSX instance for the management cluster in Region A.
- 4 [Deploy and Configure the Shared Edge and Compute Cluster Components in Region A](#) on page 90
Deploy and configure the shared edge and compute cluster components.
- 5 [Deploy and Configure the Shared Edge and Compute Cluster NSX Instance in Region A](#) on page 108
Deploy and configure the NSX instance for the shared edge and compute cluster in Region A.
- 6 [Deploy vSphere Data Protection in Region A](#) on page 140
Deploy vSphere Data Protection to back up and restore SDDC management components in Region A.
- 7 [Replace Certificates in Region A](#) on page 150
By default, virtual infrastructure management components use TLS/SSL certificates that are signed by the VMware Certificate Authority (VMCA). In this design, you replace user-facing certificates with certificates that are signed by a Microsoft Certificate Authority (CA).

Install and Configure ESXi Hosts in Region A

Start the deployment of your virtual infrastructure by installing and configuring all the ESXi hosts in Region A.

Procedure

- 1 [Prerequisites for Installation of ESXi Hosts in Region A](#) on page 10
Install and configure the ESXi hosts for the management cluster and the shared edge and compute cluster by using the same process.

- 2 [Install ESXi Interactively on All Hosts in Region A](#) on page 11
Install all ESXi hosts for all clusters interactively.
- 3 [Configure the Network on All Hosts in Region A](#) on page 12
After the initial boot, use the ESXi Direct Console User Interface (DCUI) for initial host network configuration and administrative access.
- 4 [Configure vSphere Standard Switch on a Host in the Management Cluster in Region A](#) on page 13
You must perform network configuration from the VMware Host Client only for the sfo01m01esx01 host. You perform all other host networking configuration after the deployment of the vCenter Server system that manages the hosts.
- 5 [Configure SSH and NTP on the First Host in Region A](#) on page 14
Time synchronization issues can result in serious problems with your environment. Configure NTP for each of your hosts in the management and the shared edge and compute clusters.

Prerequisites for Installation of ESXi Hosts in Region A

Install and configure the ESXi hosts for the management cluster and the shared edge and compute cluster by using the same process.

Before you start:

- Make sure that you have a Windows host that has access to your data center. You use this host to connect to your hosts and perform configuration steps.
- Ensure that routing is in place between the two regional management networks 172.16.11.0/24 and 172.17.11.0/24 as this will be needed to join the common SSO domain.

You must also prepare the installation files.

- Download the ESXi ISO installer.
- Create a bootable USB drive that contains the ESXi Installation. See "Format a USB Flash Drive to Boot the ESXi Installation or Upgrade" in *vSphere Installation and Setup*.

IP Addresses, Hostnames, and Network Configuration

The following tables contain all the values needed to configure your hosts.

Table 2-1. Management Cluster Hosts in Region A

FQDN	IP	Management VLAN	Default Gateway	NTP Server
sfo01m01esx01.sfo01.rainpole.local	172.16.11.101	1611	172.16.11.253	<ul style="list-style-type: none"> ■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local
sfo01m01esx02.sfo01.rainpole.local	172.16.11.102	1611	172.16.11.253	<ul style="list-style-type: none"> ■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local
sfo01m01esx03.sfo01.rainpole.local	172.16.11.103	1611	172.16.11.253	<ul style="list-style-type: none"> ■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local
sfo01m01esx04.sfo01.rainpole.local	172.16.11.104	1611	172.16.11.253	<ul style="list-style-type: none"> ■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local

Table 2-2. Shared Edge and Compute Cluster Hosts in Region A

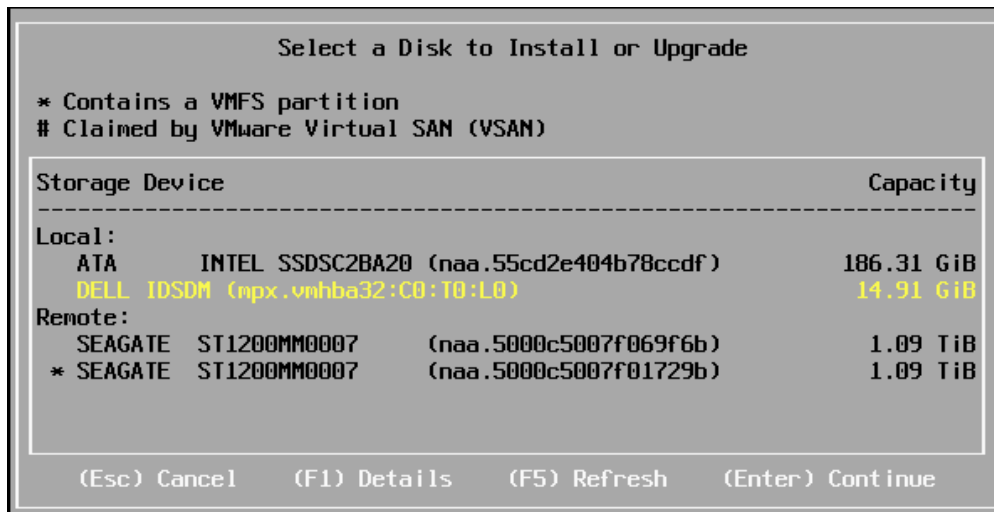

FQDN	IP	Management VLAN	Default Gateway	NTP Server
sfo01w01esx01.sfo01.rainpole.local	172.16.31.101	1631	172.16.31.253	■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local
sfo01w01esx02.sfo01.rainpole.local	172.16.31.102	1631	172.16.31.253	■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local
sfo01w01esx03.sfo01.rainpole.local	172.16.31.103	1631	172.16.31.253	■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local
sfo01w01esx04.sfo01.rainpole.local	172.16.31.104	1631	172.16.31.253	■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local

Install ESXi Interactively on All Hosts in Region A

Install all ESXi hosts for all clusters interactively.

Procedure

- 1 Power on the **sfo01m01esx01** host in Region A.
- 2 Mount the USB drive containing the ESXi ISO file, and boot from that USB drive.
- 3 On the Welcome to the VMware 6.5.0 Installation screen, press Enter to start the installation.
- 4 On the End User License Agreement (EULA) screen, press F11 to accept the EULA.
- 5 On the Select a Disk to Install or Upgrade screen, select the USB drive or SD card under local storage to install ESXi, and press Enter to continue.

- 6 Select the keyboard layout, and press Enter.
- 7 Enter the **esxi_root_user_password**, confirm, and press Enter.
- 8 On the Confirm Install screen, press F11 to start the installation.
- 9 After the installation has completed successfully, unmount the USB drive, and press Enter to reboot the host.
- 10 Repeat this procedure for all hosts in the data center, using the respective values for each host you configure.

Configure the Network on All Hosts in Region A

After the initial boot, use the ESXi Direct Console User Interface (DCUI) for initial host network configuration and administrative access.

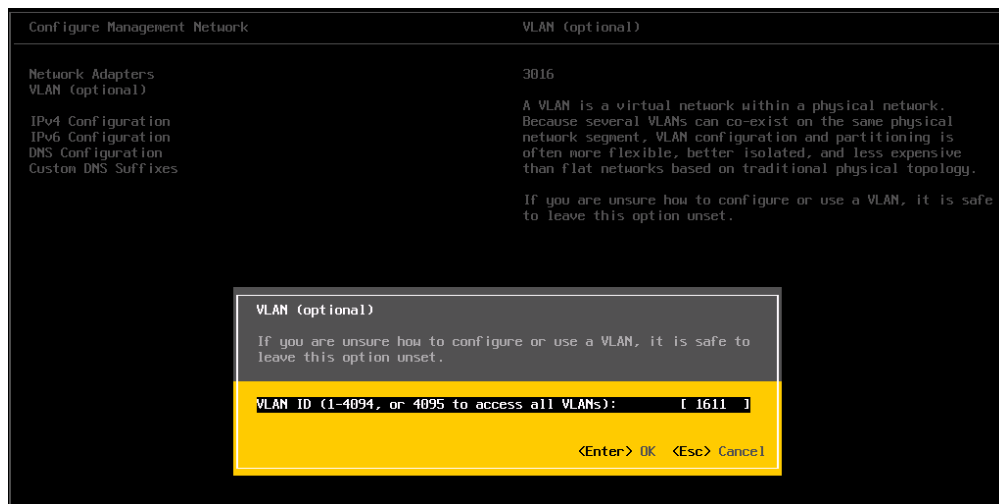

Perform the following tasks to configure the host network settings:

- Set network adapter (vmk0) and VLAN ID for the Management Network.
- Set IP address, subnet mask, gateway, DNS server, and FQDN for the ESXi host.

Repeat this procedure for all hosts in the management and shared edge and compute pods. Enter the respective values from the prerequisites section for each host that you configure. See [“Prerequisites for Installation of ESXi Hosts in Region A,”](#) on page 10.

Procedure

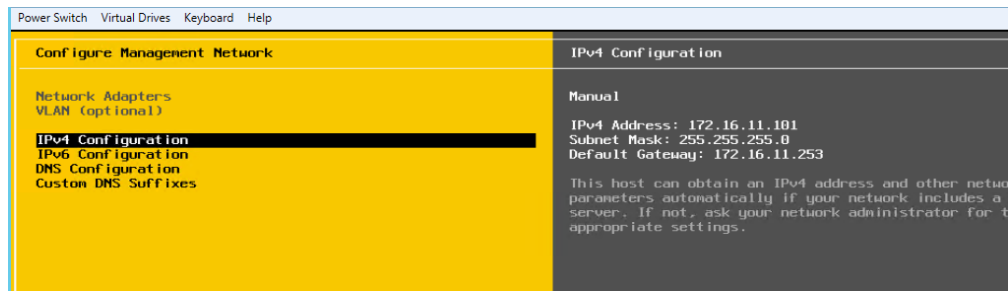

- 1 Open the DCUI on the physical ESXi host `sfo01m01esx01`.
 - a Open a console window to the host.
 - b Press F2 to enter the DCUI.
 - c Enter **root** as login name, enter the **esxi_root_user_password** password, and press Enter.
- 2 Configure the network.
 - a Select **Configure Management Network** and press Enter.
 - b Select **VLAN (Optional)** and press Enter.
 - c Enter **1611** as the VLAN ID for the Management Network and press Enter.

- d Select **IPv4 Configuration** and press Enter.

- e Configure IPv4 network using the following settings, and press Enter.

Setting	Value
Set static IPv4 address and network configuration	Selected
IPv4 Address	172.16.11.101
Subnet Mask	255.255.255.0
Default Gateway	172.16.11.253

- f Select **DNS Configuration** and press Enter.
- g Configure the DNS by using the following settings, and press Enter.

Setting	Value
Use the following DNS Server address and hostname	Selected
Primary DNS Server	172.16.11.5
Alternate DNS Server	172.16.11.4
Hostname	sfo01m01esx01.sfo01.rainpole.local

- h Select **Custom DNS Suffixes** and press Enter.
- i Ensure there are no suffixes listed, and press Enter.
- 3 After completing all host network settings, press Escape to exit, and press Y to confirm the changes.
- 4 Repeat this procedure for all hosts in the management and shared edge and compute pods.

Configure vSphere Standard Switch on a Host in the Management Cluster in Region A

You must perform network configuration from the VMware Host Client only for the sfo01m01esx01 host. You perform all other host networking configuration after the deployment of the vCenter Server system that manages the hosts.

You configure a vSphere Standard Switch with two port groups:

- The existing virtual machine port group.
- VMkernel port group.

This configuration provides connectivity and common network configuration for virtual machines that reside on each host.

Procedure

- 1 Log in to the vSphere host using the VMware Host Client.
 - a Open a Web browser and go to **https://sfo01m01esx01.sfo01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	root
Password	esxi_root_user_password

- 2 Click **OK** to Join the Customer Experience Improvement Program.
- 3 Configure a VLAN for the VM Network Portgroup.
 - a In the Navigator, click **Networking**, click the **Port Groups** tab, choose the VM Network port group, and click **Edit Settings**.
 - b On the Edit port group - VM Network window, input **1611** for **VLAN ID**, and click **OK**.

Configure SSH and NTP on the First Host in Region A

Time synchronization issues can result in serious problems with your environment. Configure NTP for each of your hosts in the management and the shared edge and compute clusters.

Procedure

- 1 Log in to the sfo01m01esx01.sfo01.rainpole.local host using the VMware Host Client.
 - a Open a Web browser and go to **sfo01m01esx01.sfo01.rainpole.local**.

Setting	Value
User name	root
Password	esxi_root_user_password

- 2 Configure SSH options.
 - a In the Navigator, click **Manage**, click the **Services** tab, select the **TSM-SSH** service, and click the **Actions** menu. Choose **Policy** and click **Start and stop with host**.
 - b Click **Start** to start the service.
- 3 Configure the NTP Daemon (ntpd) options.
 - a In the Navigator, click **Manage**, click the **System** tab, click **Time & date**, and click **Edit Settings**.
 - b In the Edit Time configuration dialog box, select the **Use Network Time Protocol (enable NTP client)** radio button, change the NTP service startup policy to **Start and stop with host**, and enter **ntp.sfo01.rainpole.local**, **ntp.lax01.rainpole.local** as NTP servers.
 - c Click **Save** to save these changes.
 - d Start the service by clicking **Actions**, hover over **NTP service**, and choose **Start**.

Deploy and Configure the Platform Services Controller and vCenter Server Components in Region A

Deploy and configure the cluster components for both the management cluster and the shared edge and compute cluster.

Procedure

- 1 [Deploy the External Platform Services Controllers for the vCenter Servers in Region A](#) on page 16
Two external Platform Services Controller instances must be deployed in Region A. One will be associated with the management cluster, and one will be associated with the shared edge and compute cluster, but they will both belong to the same SSO domain for Identity Management. Work through this procedure twice, using the vCenter Server appliance ISO file and the customized data for each instance.
- 2 [Join the Platform Services Controllers to Active Directory in Region A](#) on page 18
After you have successfully installed the Platform Services Controller instances, you must add the appliances to your Active Directory domain. After that, add the Active Directory domain as an identity source to vCenter Single Sign-On. When you do, users in the Active Directory domain are visible to vCenter Single Sign-On and can be assigned permissions to view or manage SDDC components. This procedure will be done for the Platform Services Controllers for the management cluster and the shared edge and compute cluster.
- 3 [Replace the Platform Services Controller Certificates in Region A](#) on page 20
You replace the machine SSL certificate on each Platform Services Controller instance in Region A with a custom certificate that is signed by the certificate authority (CA) available on the parent Active Directory (AD) server.
- 4 [Update the Platform Services Controller SSO Configuration and Endpoints in Region A](#) on page 22
Before installing vCenter Server, the Platform Services Controller endpoints must be updated to reflect the name of the load balancers virtual IP.
- 5 [Deploy the Management vCenter Server Instance in Region A](#) on page 23
You can now install the vCenter Server appliance for the management applications and assign a license.
- 6 [Set SDDC Deployment Details on the Management vCenter Server in Region A](#) on page 26
Set an identity of your SDDC deployment on the Management vCenter Server in Region A. You can also use this identity as a label in tools for automated SDDC deployment.
- 7 [Configure the Management Cluster in Region A](#) on page 26
You must now create and configure the management cluster.
- 8 [Create a vSphere Distributed Switch for the Management Cluster in Region A](#) on page 28
After all ESXi hosts have been added to the cluster, create a vSphere Distributed Switch to handle the traffic of the management applications in the SDDC. You must also create port groups to prepare your environment to migrate the Platform Services Controller and vCenter Server instances to the distributed switch.
- 9 [Create vSAN Disk Groups for the Management Cluster in Region A](#) on page 33
vSAN disk groups must be created on each host that is contributing storage to the vSAN datastore.
- 10 [Enable vSphere HA on the Management Cluster in Region A](#) on page 33
After vSphere vSphere Distributed Switch has been created and connected with all hosts, enable vSphere HA on the cluster.

- 11 [Change Advanced Options on the ESXi Hosts in the Management Cluster in Region A](#) on page 34
Change the default ESX Admins group to achieve greater levels of security and enable vSAN to provision the Virtual Machine Swap files as thin to save space in the vSAN datastore.
- 12 [Mount NFS Storage for the Management Cluster in Region A](#) on page 35
You must mount an NFS datastore where vSphere Data Protection will later be deployed.
- 13 [Create and Apply the Host Profile for the Management Cluster in Region A](#) on page 36
Host Profiles ensure all hosts in the cluster have the same configuration.
- 14 [Set Virtual SAN Policy on Management Virtual Machines in Region A](#) on page 38
After you apply the host profile to all of the hosts, set the storage policy of the management virtual machines to the Virtual SAN Default Storage Policy.
- 15 [Create the VM and Template Folders in Region A](#) on page 39
Create folders to group objects of the same type for easier management.
- 16 [Create Anti-Affinity Rules for the Platform Services Controller in Region A](#) on page 40
Anti-Affinity rules prevent virtual machines from running on the same host. This helps to maintain redundancy in the event of host failures.
- 17 [Create VM Groups to Define Startup Order in the Management Cluster in Region A](#) on page 41
VM Groups allow you to define the startup order of virtual machines. Startup orders are used during vSphere HA events such that vSphere HA powers on virtual machines in the correct order.

Deploy the External Platform Services Controllers for the vCenter Servers in Region A

Two external Platform Services Controller instances must be deployed in Region A. One will be associated with the management cluster, and one will be associated with the shared edge and compute cluster, but they will both belong to the same SSO domain for Identity Management. Work through this procedure twice, using the vCenter Server appliance ISO file and the customized data for each instance.

Procedure

- 1 Log in to the Windows host that has access to your data center as an administrator.
- 2 Start the vCenter Server Appliance Installer wizard.
 - a Browse to the vCenter Server Appliance ISO file.
 - b Open the <dvd-drive>:\vcsa-ui-installer\win32\Installer.exe application file.
- 3 Complete Stage 1 of the vCenter Server Appliance Deployment wizard.
 - a Click **Install** to start the installation.
 - b Click **Next** on the Introduction page.
 - c On the End User License Agreement page, select the **I accept the terms of the license agreement** check box, and click **Next**.
 - d On the Select deployment type page, click **Platform Services Controller** and click **Next**.

- e On the Appliance deployment target page, enter the following settings and click **Next**.

Setting	Value
FQDN or IP Address	sfo01m01esx01.sfo01.rainpole.local
HTTPS port	443
User name	root
Password	<i>esxi_root_user_password</i>

- f In the Certificate Warning dialog box, click **Yes** to accept the host certificate.

- g On the Set up appliance VM page, enter the following settings, and click **Next**.

Setting	Management Value	Edge/Compute Value
VM name	sfo01m01psc01	sfo01w01psc01
Root password	<i>mgmtpsc_root_password</i>	<i>comppsc_root_password</i>
Confirm root password	<i>mgmtpsc_root_password</i>	<i>comppsc_root_password</i>

- h On the Select datastore page, perform the following steps, and click **Next**.

Setting	Management Value	Edge/Compute Value
Select datastore	Select Install on a new Virtual SAN datastore on the target host and click Next	Select the existing vSAN datastore
	Confirm at least one Cache tier and two Capacity tier disks have been claimed	
	Select Enable Thin Disk Mode	Select Enable Thin Disk Mode

- i On the Configure network settings page, enter the following settings and click **Next**.

Setting	Management Value	Edge/Compute Value
Network	VM Network	VM Network
IP version	IPv4	IPv4
IP assignment	static	static
System name	sfo01m01psc01.sfo01.rainpole.local	sfo01w01psc01.sfo01.rainpole.local
IP address	172.16.11.61	172.16.11.63
Subnet mask or prefix length	255.255.255.0	255.255.255.0
Default gateway	172.16.11.253	172.16.11.253
DNS servers	172.16.11.5,172.16.11.4	172.16.11.5,172.16.11.4

- j On the Ready to complete stage 1 page, review the configuration and click **Finish** to start the deployment.
- k When the deployment completes, click **Continue** to proceed to second stage of the installation, setting up the Platform Services Controller Appliance.

- 4 Complete Stage 2 of the Set Up Platform Services Controller Appliance wizard.
 - a Click **Next** on the Introduction page.
 - b On the Appliance configuration page, enter the following settings and click **Next**.

Setting	Value
Time synchronization mode	Synchronize time with NTP servers
NTP servers (comma-separated list)	ntp.sfo01.rainpole.local
SSH access	Enabled

- c On the SSO configuration page, enter the following settings, and click **Next**.

Setting	Management Value	Edge/Compute Value
SSO configuration	Create a new SSO domain	Join an existing SSO domain
Platform Services Controller	N/A	sfo01m01psc01.sfo01.rainpole.local
HTTPS port	N/A	443
SSO domain name	vsphere.local	vsphere.local
SSO password	<i>sso_password</i>	<i>sso_password</i>
Confirm password	<i>sso_password</i>	N/A
Site name	sfo01	N/A

- d On the SSO Site Name page, select **Join an existing site** radio button, choose **sfo01** from the **SSO site name** drop-down menu, and click **Next**. This page will only appear during the deployment of the second Platform Services Controller. It will not occur during the initial deployment.
 - e On the Configure CEIP page, verify that the **Join the VMware's Customer Experience Improvement Program (CEIP)** check box is checked and click **Next**.
 - f On the Ready to complete page, review the configuration and click **Finish** to complete the setup.
 - g Click **OK** on the Warning.
 - h When the installation completes click, **Close**.
- 5 Repeat this procedure for each platform services controller, using the respective values for each.

Join the Platform Services Controllers to Active Directory in Region A

After you have successfully installed the Platform Services Controller instances, you must add the appliances to your Active Directory domain. After that, add the Active Directory domain as an identity source to vCenter Single Sign-On. When you do, users in the Active Directory domain are visible to vCenter Single Sign-On and can be assigned permissions to view or manage SDDC components. This procedure will be done for the Platform Services Controllers for the management cluster and the shared edge and compute cluster.

Repeat this procedure twice, once for the of the management cluster and again for the shared edge and compute cluster.

Procedure

- 1 Log in to the Platform Services Controller administration interface.
 - a Open a Web browser and go to the URL for either the Management or Edge/Compute cluster.

Setting	Management Value	Edge/Compute Value
PSC Link	https://sfo01m01psc01.sfo01.rainpole.local	https://sfo01w01psc01.sfo01.rainpole.local

- b Click the link for **Platform Services Controller web interface**.
 - c Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Add the management Platform Services Controller instance to the Active Directory domain.
 - a In the Navigator, click **Appliance Settings**, click the **Manage** tab, and click **Join**.
 - b In the Join Active Directory Domain dialog box, enter the following settings and click **OK**.

Setting	Value
Domain	sfo01.rainpole.local
User name	ad_admin_acct@sfo01.rainpole.local
Password	ad_admin_password

- 3 Reboot the Platform Services Controller instance to apply the changes.
 - a Click the **Appliance settings** tab, and click the **VMware Platform Services Appliance** link.
 - b Log in to the VMware vSphere Appliance Management interface with the following credentials.

Setting	Value
User name	root
Password	psc_root_password

- c On the Summary page, click **Reboot**.
 - d In the System Reboot dialog box, click **Yes**.
 - e Wait for the reboot process to finish.
- 4 After the reboot process finishes, log in to <https://sfo01m01psc01.sfo01.rainpole.local> again using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 5 Verify that the Platform Services Controller has successfully joined the domain, click **Appliance Settings** and click the **Manage** tab.

- 6 Add Active Directory as a vCenter Single Sign-On identity source for the Management cluster.

Note This step should only be performed on the Platform Services Controller for the Management cluster. Do not repeat this step when joining the Edge/Compute Platform Services Controller to Active Directory.

- a In the Navigator, click **Configuration** and click the **Identity Sources** tab.
- b Click the **Add** icon to add a new identity source.
- c In the Add Identity Source dialog box, select the following settings and click **OK**.

Setting	Value
Identity source type	Active Directory (Integrated Windows Authentication)
Domain name	SFO01.RAINPOLE.LOCAL
Use machine account	Selected

- d Under Identity Sources, select the **rainpole.local** identity source and click **Set as Default Domain** to make `rainpole.local` the default domain.
 - e In the confirmation dialog box, click **Yes**.
- 7 Repeat steps 1 thru 5 of this procedure for the Platform Services Controller for the shared edge and compute cluster.

Replace the Platform Services Controller Certificates in Region A

You replace the machine SSL certificate on each Platform Services Controller instance in Region A with a custom certificate that is signed by the certificate authority (CA) available on the parent Active Directory (AD) server.

You must repeat this procedure twice: first on the Platform Services Controller `sfo01m01psc01.sfo01.rainpole.local`, and then on the Platform Services Controller `sfo01w01psc01.sfo01.rainpole.local`.

Table 2-3. Certificate-Related Files on Platform Services Controller Instances

Platform Services Controller	Certificate File Name	Replacement Order
sfo01m01psc01.sfo01.rainpole.local	■ sfo01psc01.1.cer	First
	■ sfo01psc01.key	
	■ Root64.cer	
sfo01w01psc01.sfo01.rainpole.local	■ sfo01psc01.1.cer	Second
	■ sfo01psc01.key	
	■ Root64.cer	

Prerequisites

- CA-signed certificate files generated by using VMware Validated Design Certificate Generation Utility (CertGenVVD). See the *VMware Validated Design Planning and Preparation* documentation.
- A Windows host with an SSH terminal access software such as PuTTY and an scp software such as WinSCP installed.

Procedure

- 1 Change the Platform Services Controller command shell to the Bash shell to allow secure copy (scp) connections.

- a Open an SSH connection to sfo01m01psc01.sfo01.rainpole.local and log in using the following credentials.

Setting	Value
Username	root
Password	mgmtpsc_root_password

- b Run the following command to enable Bash shell access for the root user.

```
shell
chsh -s "/bin/bash" root
```

- 2 Copy the generated certificates to the Platform Services Controller.

- a Run the following command to create a new temporary folder.

```
mkdir -p /root/certs
```

- b Copy the certificate files sfo01psc01.1.cer, sfo01psc01.key and Root64.cer to the /root/certs folder.

You can use an scp software like WinSCP.

- 3 Replace the certificate on the Platform Services Controller.

- a Start the vSphere Certificate Manager utility on the Platform Services Controller.

```
/usr/lib/vmware-vmca/bin/certificate-manager
```

- b Select **Option 1 (Replace Machine SSL certificate with Custom Certificate)**.

- c Enter the default vCenter Single Sign-On user name **administrator@vsphere.local** and the **vsphere_admin** password.

- d Select **Option 2 (Import custom certificate(s) and key(s) to replace existing Machine SSL certificate)**.

- e When prompted for the custom certificate, enter **/root/certs/sfo01psc01.1.cer**.

- f When prompted for the custom key, enter **/root/certs/sfo01psc01.key**.

- g When prompted for the signing certificate, enter **/root/certs/Root64.cer**.

- h When prompted to Continue operation, enter **Y**.

- i The Platform Services Controller services restarts automatically.

- 4 After Certificate Manager replaces the certificates, run the following commands to restart the vami-lighttp service and to remove certificate files.

```
service vami-lighttp restart
cd /root/certs
rm sfo01psc01.1.cer sfo01psc01.key Root64.cer
```

- 5 Repeat the procedure to replace the certificate on sfo01w01psc01.sfo01.rainpole.local.

Update the Platform Services Controller SSO Configuration and Endpoints in Region A

Before installing vCenter Server, the Platform Services Controller endpoints must be updated to reflect the name of the load balancers virtual IP.

Prerequisites

Prior to completing this procedure, a DNS record must be created for the load balancer's virtual IP address and FQDN. This A record will temporarily be set to the IP address of the Management PSC (sfo01m01psc01.sfo01.rainpole.local) and will be adjusted to the proper address after the load balancer is completely configured.

Procedure

- 1 Create a DNS record for the load balancer FQDN.
 - a Open a remote desktop connection to your DNS server.
 - b Create a DNS A record with the values shown in the following table.

FQDN	IP
sfo01psc01.sfo01.rainpole.local	172.16.11.61

- 2 Update the Platform Services Controller SSO configuration on **sfo01m01psc01.sfo01.rainpole.local**.

- a Open an SSH connection to **sfo01m01psc01.sfo01.rainpole.local**.
- b Log in using the following credentials.

Setting	Value
User name	root
Password	mgmtpsc_root_password

- c Enter **cd /usr/lib/vmware-ssso/bin/** and press **Enter**.
- d Enter **python updateSSOConfig.py --lb-fqdn=sfo01psc01.sfo01.rainpole.local** and press **Enter**.

```
root@mgmt01psc01 [ /usr/lib/vmware-ssso/bin ]# python updateSSOConfig.py --lb-fqdn=sfo01psc01.sfo01.rainpole.local
script version:1.1.0
executing vmafd-cli command
Modifying hostname.txt
modifying server.xml
Executing StopService --all
Executing StartService --all
root@mgmt01psc01 [ /usr/lib/vmware-ssso/bin ]#
```

- 3 Update the Platform Services Controller SSO configuration on **sfo01w01psc01.sfo01.rainpole.local**.

- a Open an SSH connection to **sfo01w01psc01.sfo01.rainpole.local**.
- b Log in using the following credentials.

Setting	Value
User name	root
Password	comppsc_root_password

- c Enter `cd /usr/lib/vmware-ss0/bin/` and press **Enter**.
- d Enter `python updateSS0Config.py --lb-fqdn=sfo01psc01.sfo01.rainpole.local` and press **Enter**.

```
root@comp01psc01 [ /usr/lib/vmware-ss0/bin ]# python updateSS0Config.py --lb-fqdn=sfo01psc01.sfo01.rainpole.local
script version:1.1.0
executing vmafd-cli command
Modifying hostname.txt
modifying server.xml
Executing StopService --all
Executing StartService --all
root@comp01psc01 [ /usr/lib/vmware-ss0/bin ]#
```

- 4 Update the Platform Services Controller endpoints.

Only perform this procedure on one of the Platform Services Controllers.

- a Open an SSH connection to `sfo01m01psc01.sfo01.rainpole.local`.
- b Log in using the following credentials.

Setting	Value
User name	root
Password	<i>mgmtpsc_root_password</i>

- c Enter `cd /usr/lib/vmware-ss0/bin/` and press **Enter**.
- d Enter
`python UpdateLsEndpoint.py --lb-fqdn=sfo01psc01.sfo01.rainpole.local --user=Administrator@vsphere.local` and press **Enter**.
- e Enter the *vsphere_admin_password* when prompted.

```
root@mgmt01psc01 [ /usr/lib/vmware-ss0/bin ]# python UpdateLsEndpoint.py --lb-fqdn=sfo01psc01.sfo01.rainpole.local --u
ser=Administrator@vsphere.local
Password:
Usage :
python UpdateLsEndpoint.py --lb-fqdn=<load_balancer_fqdn> --user=Administrator@vsphere.local --password=****
The user may choose not to specify the --password option. This is to prevent the Password from being displayed on th
e command line

When Upgrading from 6.0 to 6.5 in bridge mode use below option
python UpdateLsEndpoint.py --upgrade --lb-fqdn=<load_balancer_fqdn> --user=Administrator@vsphere.local --password=**
** --lb-cert=<Absolute file location of Load balancer certificate file>
The user may choose not to specify the --password option. This is to prevent the Password from being displayed on th
e command line
root@mgmt01psc01 [ /usr/lib/vmware-ss0/bin ]#
```

Deploy the Management vCenter Server Instance in Region A

You can now install the vCenter Server appliance for the management applications and assign a license.

Procedure

- 1 Start the vCenter Server Appliance Deployment wizard.
 - a Browse to the vCenter Server Appliance ISO file.
 - b Open the `<dvd-drive>:\vcsa-ui-installer\win32\Installer` application file.
- 2 Complete the vCenter Server Appliance Deployment wizard.
 - a Click **Install** to start the installation.
 - b Click **Next** on the Introduction page.
 - c On the End User License Agreement page, select the **I accept the terms of the license agreement** check box and click **Next**.

- d On the Select deployment type page, under External Platform Services Controller, select the **vCenter Server (Requires External Platform Services Controller)** radio button and click **Next**.
- e On the Appliance deployment target page, enter the following settings and click **Next**.

Setting	Value
ESXi host or vCenter Server name	sfo01m01esx01.sfo01.rainpole.local
HTTPS port	443
User name	root
Password	esxi_root_user_password

- f In the Certificate Warning dialog box, click **Yes** to accept the host certificate.
- g On the Set up appliance VM page, enter the following settings and click **Next**.

Setting	Value
VM name	sfo01m01vc01
Root password	mgmtvc_root_password
Confirm root password	mgmtvc_root_password

- h On the Select deployment size page, select **Small vCenter Server** and click **Next**.
- i On the Select datastore page, select the **vsanDatastore** datastore, select the **Enable Thin Disk Mode** check box, enter **sfo01-m01dc** for the Datacenter Name, **sfo01-m01-mgmt01** for the Cluster Name, and click **Next**.
- j On the Configure network settings page, enter the following settings and click **Next**.

Setting	Value
Network	VM Network
IP version	IPv4
IP assignment	static
System name	sfo01m01vc01.sfo01.rainpole.local
IP address	172.16.11.62
Subnet mask or prefix length	255.255.255.0
Default gateway	172.16.11.253
DNS servers	172.16.11.5,172.16.11.4

- k On the Ready to complete stage 1 page, review the configuration and click **Finish** to start the deployment.
 - l Once the deployment completes, click **Continue** to proceed to stage 2 of the installation.
- 3 Complete the Install - Stage 2: Set Up vCenter Server Appliance wizard.
- a Click **Next** on the Introduction page.
 - b On the Appliance configuration page, enter the following settings and click **Next**.

Setting	Value
Time synchronization mode	Synchronize time with NTP servers
NTP servers (comma-separated list)	ntp.sfo01.rainpole.local
SSH access	Enabled

- c On the SSO configuration page, enter the following settings and click **Next**.

Setting	Value
Platform Services Controller	sfo01psc01.sfo01.rainpole.local
HTTPS port	443
SSO domain name	vsphere.local
SSO password	sso_password

- d On the Ready to Complete page, review your entries and click **Finish**.
- e Click **OK** on the Warning dialog.
- f On the Complete page, click **Close**.
- 4 Add new licenses for this vCenter Server instance and the management cluster ESXi hosts.
- a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
- b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- c On the Home page of the vSphere Web Client, click **Licensing** under **Administration**, and click the **License** tab.
- d Click the **Create New Licenses** icon to add license keys.
- e On the Enter license keys page, enter license keys for vCenter Server, ESXi and vSAN, one per line, and click **Next**.
- f On the Edit license name page, enter a descriptive name for each license key and click **Next**.
- g On the Ready to complete page, review your entries and click **Finish**.
- 5 Assign the newly added licenses to the vCenter Server asset.
- a Click the **Assets** tab.
- b Select the vCenter Server instance, and click the **Assign License** icon.
- c Select the vCenter Server license that you entered in the previous step, and click **OK**.
- 6 Assign the vCenterAdmins domain group to the vCenter Server Administrator role.
- a In the Navigator, click **Administration**.
- b In the Administration window, click **Global Permissions**, and select the **Manage** tab.
- c In the Global Permissions box, click the **Add permission** icon.
- d In the Global Permissions Root - Add Permissions window, click the **Add** button.
- e Select **sfo01.rainpole.local** from the **Domain** drop down list.
- f Enter **vCenterAdmins** in the **Search** field and press **Enter**.
- g Select the **vCenterAdmins** group, click the **Add** button, and then click **OK**.
- h Ensure **Administrator** is selected and the **Propagate to children** check box is selected under Assigned Role and click **OK**.

Set SDDC Deployment Details on the Management vCenter Server in Region A

Set an identity of your SDDC deployment on the Management vCenter Server in Region A. You can also use this identity as a label in tools for automated SDDC deployment.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the **Home** menu of the vSphere Web Client, select **Global Inventory Lists**.
- 3 In the Navigator, click **vCenter Servers** under Resources.
- 4 Click the **sfo01m01vc01.sfo01.rainpole.local** vCenter Server object and click the **Configure** tab in the central pane.
- 5 Under the Settings pane, click **Advanced Settings** and click the **Edit** button.
- 6 In the Edit Advanced vCenter Server Settings dialog box, set the following value pairs one by one, clicking **Add** after each entry.

Name	Value
config.SDDC.Deployed.Type	VVD
config.SDDC.Deployed.Flavor	Standard
config.SDDC.Deployed.Version	4.1.0
config.SDDC.Deployed.Method	DIY

- 7 Click **OK** to close the window.

Configure the Management Cluster in Region A

You must now create and configure the management cluster.

This process consists of the following actions:

- Enabling vSphere DRS.
- Enabling Enhanced vMotion Compatibility.
- Adding the hosts to the cluster.
- Adding a host to the active directory domain.
- Renaming the vSAN datastore.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Enable vSphere DRS.
 - a Expand the **sfo01-m01dc** Datacenter object.
 - b Click the **sfo01-m01-mgmt01** cluster object then click the **Configure** tab.
 - c Select the vSphere DRS page, and click **Edit**.
 - d Select the **Turn On vSphere DRS** checkbox then click **OK**.
- 3 Enable VMware EVC.
 - a Select the VMware EVC page, and click **Edit**.
 - b Set EVC mode to the highest available setting supported for the hosts in the cluster, and click **OK**.
- 4 Add a host to the management cluster.
 - a Right-click the **sfo01-m01-mgmt01** cluster, and click **Add Host**.
 - b On the Name and location page, enter **sfo01m01esx02.sfo01.rainpole.local** in the **Host name or IP address** text box and click **Next**.
 - c On the Connection settings page, enter the following credentials and click **Next**.

Setting	Value
User name	root
Password	<i>esxi_root_user_password</i>

- d In the Security Alert dialog, click **Yes**.
 - e On the Host summary page, review the host information and click **Next**.
 - f On the Assign license page, select the ESXi license key that you entered during the vCenter Server deployment and click **Next**.
 - g On the Lockdown mode page, click **Next**.
 - h On the Resource pool page, click **Next**.
 - i On the Ready to complete page, review your entries and click **Finish**.
- 5 Repeat the previous step for the two remaining hosts to add them to the management cluster.

Setting	Value
Host 3	sfo01m01esx03.sfo01.rainpole.local
Host 4	sfo01m01esx04.sfo01.rainpole.local

- 6 Add an ESXi host to the active directory domain
 - a In the Navigator, click **Hosts and Clusters** and expand the entire **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Select the **sfo01m01esx01.sfo01.rainpole.local** host.
 - c Click the **Configure** tab.
 - d Under System, select **Authentication Services**.
 - e In the Authentication Services panel, click the **Join Domain** button.
 - f In the Join Domain dialog, enter the following settings and click **OK**.

Setting	Value
Domain	sfo01.rainpole.local
Using credentials	Selected
User name	ad_admin_acct@sfo01.rainpole.local
Password	ad_admin_password

- 7 Set the Active Directory Service to Start and stop with host.
 - a In the Navigator, click **Hosts and Clusters** and expand the entire **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Select the **sfo01m01esx01.sfo01.rainpole.local** host.
 - c Click the **Configure** tab.
 - d Under System, select **Security Profile**.
 - e Click the **Edit** button next to Services.
 - f Select the **Active Directory Service** and change the **Startup Policy** to Start and stop with host and click **OK**.
- 8 Rename the vSAN datastore.
 - a In the Navigator, click **Storage** and expand the entire **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Select **vsanDatastore**, and select **Actions > Rename**.
 - c In the Datastore - Rename dialog, enter **sfo01-m01-vsan01** as the datastore name, and click **OK**.

Create a vSphere Distributed Switch for the Management Cluster in Region A

After all ESXi hosts have been added to the cluster, create a vSphere Distributed Switch to handle the traffic of the management applications in the SDDC. You must also create port groups to prepare your environment to migrate the Platform Services Controller and vCenter Server instances to the distributed switch.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

2 Create vSphere Distributed Virtual Switch.

- a In the Navigator, click **Networking** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- b Right-click the **sfo01-m01dc** datacenter, and select **Distributed Switch > New Distributed Switch** to start the New Distributed Switch wizard.
- c On the Name and location page, enter **sfo01-m01-vds01** as the name and click **Next**.
- d On the Select version page, ensure the **Distributed switch: 6.5.0** radio button is selected and click **Next**.
- e On the Edit settings page, enter the following values and click **Next**.

Setting	Value
Number of uplinks	2
Network I/O Control	Enabled
Create a default port group	Deselected

- f On the Ready to complete page, review your entries and click **Finish**.

3 Edit the settings of the **sfo01-m01-vds01** distributed switch.

- a Right-click the **sfo01-m01-vds01** distributed switch, and select **Settings > Edit Settings**.
- b Click the **Advanced** tab.
- c Enter **9000** as MTU (Bytes) value, and click **OK**.

4 Create port groups in the **sfo01-m01-vds01** distributed switch for the management traffic types.

- a Right-click the **sfo01-m01-vds01** distributed switch, and select **Distributed Port Group > New Distributed Port Group**.
- b Create port groups with the following settings and click **Next**.

Port Group Name	Port Binding	VLAN Type	VLAN ID
sfo01-m01-vds01-management	Ephemeral - no binding	VLAN	1611
sfo01-m01-vds01-vmotion	Static binding	VLAN	1612
sfo01-m01-vds01-vsan	Static binding	VLAN	1613
sfo01-m01-vds01-nfs	Static binding	VLAN	1615
sfo01-m01-vds01-replication	Static binding	VLAN	1616
sfo01-m01-vds01-ext-management	Static binding	VLAN	130
sfo01-m01-vds01-uplink01	Static binding	VLAN	2711
sfo01-m01-vds01-uplink02	Static binding	VLAN	2712

NOTE The port group for VXLAN traffic is automatically created later during the configuration of the NSX Manager for the management cluster.

- c On the Ready to complete page, review your entries, and click **Finish**.
- d Repeat this step for each port group.

5 Change the port groups to use the Route Based on Physical NIC Load teaming algorithm.

- a Right-click the **sfo01-m01-vds01** distributed switch and select **Distributed Port Group > Manage Distributed Port Groups**.
- b On the Select port group policies page, select **Teaming and failover** and click **Next**.

- c Click the **Select distributed port groups** button, add all port groups except sfo01-m01-vds01-uplink01 and sfo01-m01-vds01-uplink02, click **OK** and click **Next**.
 - d On the Teaming and failover page, select **Route based on physical NIC load** from the **Load balancing** drop-down menu and click **Next**.
 - e Click **Finish**.
- 6 Configure the uplinks for the sfo01-m01-vds01-uplink01 and sfo01-m01-vds01-uplink02 port groups.
- a Right click the **sfo01-m01-vds01-uplink01** port group, and click **Edit Settings**.
 - b Select **Teaming and Failover**.
 - c Move **dvUplink2** to **Unused uplinks** and click **OK**.
 - d Right click the **sfo01-m01-vds01-uplink02** port group, and click **Edit Settings**.
 - e Select **Teaming and Failover**.
 - f Move **dvUplink1** to **Unused uplinks** and click **OK**.
- 7 Connect the ESXi host, **sfo01m01esx01.sfo01.rainpole.local**, to the **sfo01-m01-vds01** distributed switch by migrating their VMkernel and virtual machine network adapters.
- a Right-click the **sfo01-m01-vds01** distributed switch, and click **Add and Manage Hosts**.
 - b On the Select task page, select **Add hosts** and click **Next**.
 - c On the Select hosts page, click **New hosts**.
 - d In the Select new hosts dialog box, select **sfo01m01esx01.sfo01.rainpole.local** and click **OK**.
 - e On the Select hosts page, click **Next**.
 - f On the Select network adapter tasks page, ensure that **Manage physical adapters** and **Manage VMkernel adapters** check boxes are selected, and click **Next**.
 - g On the Manage physical network adapters page, click **vmnic1** and click **Assign uplink**.
 - h In the Select an Uplink for vmnic1 dialog, select **Uplink 1** and click **OK**.
 - i On the Manage physical network adapters page, click **Next**.
- 8 Configure the VMkernel network adapters, edit the existing, and add new adapters as needed.
- a On the Manage VMkernel network adapters page, click **vmk0** and click **Assign port group**.
 - b Select **sfo01-m01-vds01-management** and click **OK**.
 - c On the Manage VMkernel network adapters page, click **On this switch** and click **New adapter**.
 - d On the Add Networking page, select **Select an existing network**, browse to select the **sfo01-m01-vds01-vsan** port group, click **OK**, and click **Next**.
 - e On the Port properties page, select the **vSAN** check box and click **Next**.
 - f On the IPv4 settings page, select **Use static IPv4 settings**, enter IP address **172.16.13.101**, enter subnet **255.255.255.0**, and click **Next**.
 - g Click **Finish**.
 - h Repeat steps 8c. - 8f. to create the remaining VMkernel network adapters and then click **Next**.

Port Group	Port Properties	IPv4 Address	Netmask
sfo01-m01-vds01-replication	■ vSphere Replication	172.16.16.101	255.255.255.0
	■ vSphere Replication NFC		
sfo01-m01-vds01-nfs	N/A	172.16.15.101	255.255.255.0

- i On the Analyze impact page, click **Next**.
 - j On the Ready to complete page, review your entries and click **Finish**.
- 9 Create the vMotion VMkernel adapter.
- a In the Navigator, click **Host and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Click on **sfo01m01esx01.sfo01.rainpole.local**.
 - c Click the **Configure** tab then select **VMkernel adapters**.
 - d Click the **Add host networking** icon and select **VMkernel Network Adapter** and click **Next**.
 - e On the Add Networking page, click **Select an existing network**, browse to select the **sfo01-m01-vds01-vmotion** port group, click **OK**, and click **Next**.
 - f On the Port properties page, select **vMotion** from the TCP/IP Stack drop-down and click **Next**.
 - g On the IPv4 settings select **Use static IPv4 settings** enter IP address **172.16.12.101**, enter subnet **255.255.255.0**, and click **Next**.
 - h On the Ready to complete page, review the configuration and click **Finish**.
- 10 Configure the MTU on the vMotion VMkernel adapter.
- a Select the vMotion VMkernel adapter created in the previous step, and click **Edit Settings**.
 - b Click the NIC Settings page.
 - c Enter **9000** for the MTU value and click **OK**.
- 11 Configure the vMotion TCP/IP stack.
- a Click **TCP/IP configuration**.
 - b Select **vMotion** and click the **Edit TCP/IP stack configuration** icon.
 - c Click on **Routing** and enter **172.16.12.253** for the **VMkernel gateway** and click **OK**.
- 12 Migrate the Platform Services Controllers and vCenter Server instances from the standard switch to the distributed switch.
- a In the Navigator, click **Networking** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Right-click the **sfo01-m01-vds01** distributed switch and click **Migrate VM to Another Network**.
 - c On the Select source and destination networks page, browse the following networks and click **Next**.
- | Setting | Value |
|---------------------|----------------------------|
| Source network | VM Network |
| Destination network | sfo01-m01-vds01-management |
- d On the Select VMs to migrate page, select **sfo01m01psc01.sfo01.rainpole.local**, **sfo01w01psc01.sfo01.rainpole.local** and **sfo01m01vc01.sfo01.rainpole.local**, and click **Next**.
 - e On the Ready to complete page, review your entries and click **Finish**.

- 13 Define Network I/O Control shares for the different traffic types on the **sfo01-m01-vds01** distributed switch.

- a Click the **sfo01-m01-vds01** distributed switch, click the **Configure** tab, and click **Resource Allocation > System traffic**.
- b Under System Traffic, configure each of the following traffic types with the following values.

Traffic Type	Physical adapter Shares
Virtual SAN Traffic	High
NFS Traffic	Low
vMotion Traffic	Low
vSphere Replication (VR) Traffic	Low
Management Traffic	Normal
vSphere Data Protection Backup Traffic	Low
Virtual Machine Traffic	High
Fault Tolerance Traffic	Low
iSCSI Traffic	Low

- 14 Migrate the last physical adapter from the standard switch to the **sfo01-m01-vds01** distributed switch.

- a In the Navigator, click **Networking** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- b Right-click the **sfo01-m01-vds01** distributed switch and select **Add and Manage Hosts**.
- c On the Select task page, select **Manage host networking**, and click **Next**.
- d On the Select hosts page, click **Attached hosts**.
- e In the Select member hosts dialog, select **sfo01m01esx01.sfo01.rainpole.local**, click **OK** and click **Next**.
- f On the Select network adapter tasks page, select **Manage physical adapters** only, and click **Next**.
- g On the Manage physical network adapters page, select **vmnic0**, and click **Assign uplink**.
- h In the Select an Uplink for vmnic1 dialog box, select **Uplink 2**, and click **OK**, and click **Next**.
- i On the Analyze Impact page, click **Next**.
- j On the Ready to complete page, click **Finish**.

- 15 Enable vSphere Distributed Switch Health Check.

- a In the Navigator, click **Networking** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- b Select the **sfo01-m01-vds01** distributed switch and click the **Configure** tab.
- c In the Navigator select **Health check** and click the **Edit** button.
- d Select **Enabled** for **VLAN and MTU** and **Teaming and failover** and click **OK**.

- 16 Delete the vSphere Standard Switch.

- a In the Navigator, click on **Hosts and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- b Click on **sfo01m01esx01.sfo01.rainpole.local** and then click the **Configure** tab.
- c On the Configure page, select **Virtual switches**, choose **vSwitch0**, and then click on the **Remove selected standard switch** icon.
- d In the Remove Standard Switch dialog, click **Yes** to confirm the removal.

Create vSAN Disk Groups for the Management Cluster in Region A

vSAN disk groups must be created on each host that is contributing storage to the vSAN datastore.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password
- 2 In the Navigator, select **Hosts and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- 3 Click on the **sfo01-m01-mgmt01** cluster and click the **Configure** tab.
- 4 Under vSAN, click **Disk Management**.
- 5 Click on **sfo01m01esx02.sfo01.rainpole.local** and click on the **Create a New Disk Group** button.
- 6 In the Create Disk Group window, select a flash disk for the cache tier, two hard disk drives for the capacity tier and click **OK**.
- 7 Repeat steps 5 and 6 for **sfo01m01esx03.sfo01.rainpole.local** and **sfo01m01esx04.sfo01.rainpole.local**.
- 8 Assign a license to vSAN.
 - a Right Click the **sfo01-m01-mgmt01** cluster and select **Assign License**.
 - b In the sfo01-m01-mgmt01 - Assign License window select the previously added Virtual SAN License and click **OK**.

Enable vSphere HA on the Management Cluster in Region A

After vSphere vSphere Distributed Switch has been created and connected with all hosts, enable vSphere HA on the cluster.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, click **Host and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- 3 Select the **sfo01-m01-mgmt01** cluster.
- 4 Click the **Configure** tab and click **vSphere Availability**.
- 5 Click **Edit**.
- 6 In the sfo01-m01-mgmt01 - Edit Cluster Settings dialog, select the **Turn on vSphere HA** check box.

- 7 Click Failures and Responses, select the following values:

Setting	Value
Enable Host Monitoring	Selected
Host Failure Response	Restart VMs
Response for Host Isolation	Power off and restart VMs
Datastore with PDL	Disabled
Datastore with APD	Disabled
VM Monitoring	VM Monitoring Only

- 8 Click Admission Control, and enter the following settings.

Setting	Value
Host failures cluster tolerates	1
Define host failover capacity by	Cluster resource percentage
Override calculated failover capacity	Deselected
Performance degradation VMs tolerate	100%

- 9 Click OK.

NOTE When you enable vSphere HA, the operation fails on hosts 2,3, and 4. This is expected behavior, networking is configured during host profile steps setup.

Change Advanced Options on the ESXi Hosts in the Management Cluster in Region A

Change the default ESX Admins group to achieve greater levels of security and enable vSAN to provision the Virtual Machine Swap files as thin to save space in the vSAN datastore.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Change the default ESX Admins group.
 - a In the Navigator, click **Hosts and Clusters** and expand the entire **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Select the **sfo01m01esx01.sfo01.rainpole.local** host.
 - c Click the **Configure** tab, click **System > Advanced System Settings**.
 - d Click the **Edit** button.

- e In the **filter** box, enter **esxAdmins** and wait for the search results.
- f Change the value of **Config.HostAgent.plugins.hostsvc.esxAdminsGroup** to **SDDC-Admins** and click **OK**.
- 3 Provision Virtual Machine swap files on vSAN as thin.
 - a In the Navigator, click **Hosts and Clusters** and expand the entire **sfo01m01vc01.sfo01.rainpole.local** tree
 - b Select the **sfo01m01esx01.sfo01.rainpole.local** host.
 - c Click the **Configure** tab, click **System > Advanced System Settings**.
 - d Click the **Edit** button.
 - e In the **filter** box, enter **vsan.swap** and wait for the search results.
 - f Change the value of **VSAN.SwapThickProvisionDisabled** to **1** and click **OK**.
- 4 Disable the SSH warning banner.
 - a In the Navigator, click **Hosts and Clusters** and expand the entire **sfo01m01vc01.sfo01.rainpole.local** tree
 - b Select the **sfo01m01esx01.sfo01.rainpole.local** host.
 - c Click the **Configure** tab, click **System > Advanced System Settings**.
 - d Click the **Edit** button.
 - e In the **filter** box, enter **ssh** and wait for the search results.
 - f Change the value of **UserVars.SuppressShellWarning** to **1** and click **OK**.

Mount NFS Storage for the Management Cluster in Region A

You must mount an NFS datastore where vSphere Data Protection will later be deployed.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, click **Host and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- 3 Click on **sfo01m01esx01.sfo01.rainpole.local**.
- 4 Click on **Datastores**.
- 5 Click the **Create a New Datastore** icon.
- 6 On the Type page, select **NFS** and click **Next**.
- 7 On the Select NFS version page, select **NFS 3** and click **Next**.

- 8 On the Name and configuration page, enter the following datastore information and click **Next**.

Setting	Value
Datastore Name	sfo01-m01-vdp01
Folder	/V2D_vDP_MgmtA_6TB
Server	172.16.15.251

- 9 On the Ready to complete page, review the configuration and click **Finish**.

Create and Apply the Host Profile for the Management Cluster in Region A

Host Profiles ensure all hosts in the cluster have the same configuration.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Create a Host Profile from *sfo01m01esx01.sfo01.rainpole.local*.
 - a In the Navigator, select **Hosts and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Right-click **sfo01m01esx01.sfo01.rainpole.local** and choose **Host Profiles > Extract Host Profile**.
 - c In the Extract Host Profile window, enter **sfo01-m01hp-mgmt01** as the name of the host profile and click **Next**.
 - d On the Ready to complete page, click **Finish**.
- 3 Attach the Host Profile to the management cluster.
 - a In the Navigator, select **Hosts and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Right-click the **sfo01-m01-mgmt01** cluster, and choose **Host Profiles > Attach Host Profile**.
 - c In the Attach Host Profile window, click **sfo01-m01hp-mgmt01**, select the **Skip Host Customization** box, and click **Finish**.
- 4 Create Host Customizations for the hosts in the management cluster.
 - a Click on the **Home** icon and choose **Policies and Profiles** from the drop down menu.
 - b In the Navigator, click **Host Profiles**.
 - c Right-click **sfo01-m01hp-mgmt01** and choose **Export Host Customizations**. Click **Save**.
 - d Choose a safe place to store the *sfo01-m01hp-mgmt01_host_customizations.csv* that is generated.
 - e Open the file with Excel.

- f Edit the Excel file to include the following values.

ESXi Host	Active Directory Configuration Password	Active Directory Configuration Username	NetStack Instance defaultTcpipStack->DNS configuration Name for this host	NetStack Instance vmotion->DNS configuration
sfo01m01esx01.sfo01.rainpole.local	ad_admin_password	ad_admin_acct@sfo01.rainpole.local	sfo01m01esx01	sfo01m01esx01
sfo01m01esx02.sfo01.rainpole.local	ad_admin_password	ad_admin_acct@sfo01.rainpole.local	sfo01m01esx02	sfo01m01esx02

sfo01m01esx04.sfo01.rainpole.local	172.16.12.104	255.255.255.0

- g When you have updated the Excel file, save it in the CSV file format and close Excel.
 - h Click the **Configure** tab.
 - i Click the **Edit Host Customizations** button.
 - j On the Select hosts page, click **Next**.
 - k On the Customize hosts page, click the **Browse** button to find the customization CSV file where it was stored, and then click **Finish**.
- 5 Remediate the hosts in the management cluster.
- a On the Policies and Profiles page, click **sfo01-m01hp-mgmt01**, click the **Monitor** tab, and then click the **Compliance** tab.
 - b Click **sfo01-m01-mgmt01** in the Host/Cluster column and click **Check Host Profile Compliance**. This compliance test will show that the first host is Compliant, but the other hosts are Not Compliant.
 - c Click on each of the non-compliant hosts, click **Remediate Hosts Based on its Host Profile**, and then click **Finish** on the wizard that appears.
- All hosts should show a Compliant status in the Host Compliance column.
- 6 Schedule nightly compliance checks.
- a On the Policies and Profiles page, click **sfo01-m01hp-mgmt01**, click the **Monitor** tab, and then click the **Scheduled Tasks** subtab.
 - b Click **Schedule a New Task** then click **Check Host Profile Compliance**.
 - c In the sfo01-m01hp-mgmt01: Check Host Profile Compliance (scheduled) window click **Scheduling Options**.
 - d Enter **sfo01-m01hp-mgmt01 Compliance Check** in the Task Name field.
 - e Click the **Change** button on the Configured Scheduler line.
 - f In the Configure Scheduler window select **Setup a recurring schedule for this action**, change the **Start time** to **10:00 PM**, and click **OK**.
 - g Click **OK** in the sfo01-m01hp-mgmt01: Check Host Profile Compliance (scheduled) window.

Set Virtual SAN Policy on Management Virtual Machines in Region A

After you apply the host profile to all of the hosts, set the storage policy of the management virtual machines to the Virtual SAN Default Storage Policy.

Set the Platform Services Controller and vCenter Server appliances to the default Virtual SAN storage policy.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, click **Hosts and Clusters** expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- 3 Select the **sfo01m01psc01** virtual machine.
- 4 Click the **Configure** tab, click **Policies**, and click **Edit VM Storage Policies**.
- 5 In the **sfo01m01psc01: Manage VM Storage Policies** dialog, from the **VM storage policy** drop down menu, select **vSAN Default Storage Policy**, and click **Apply to all**.
- 6 Click **OK** to apply the changes.
- 7 Verify that the **Compliance Status** column shows a **Compliant** status for all items in the table.
- 8 Repeat this step to apply the **vSAN Default Storage Policy** on **sfo01m01vc01** and **sfo01w01psc01** virtual machines.

Create the VM and Template Folders in Region A

Create folders to group objects of the same type for easier management.

You repeat this procedure eight times to create all of the management application folders listed in the following table.

Table 2-4. Folders for the Management Applications in Region A

Management Applications	Folder
vCenter Server and Platform Services Controllers	sfo01-m01fd-mgmt
vRealize Automation, vRealize Orchestrator, and vRealize Business	sfo01-m01fd-vra
vRealize Automation (Proxy Agent) and vRealize Business (Data Collector)	sfo01-m01fd-vraias
vRealize Operations Manager	sfo01-m01fd-vrops
vRealize Operations Manager (Remote Collectors)	sfo01-m01fd-vropsrc
vRealize Log Insight	sfo01-m01fd-vrli
NSX Manager, Controllers, and Edges	sfo01-m01fd-nsx
VMware Site Recovery Manager and vSphere Data Protection	sfo01-m01fd-bcdr

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Create folders for each of the management applications.
 - a In the Navigator, click **VMs and Templates** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Right-click the **sfo01-m01dc** data center, and select **New Folder > New VM and Template Folder**.
 - c In the New Folder dialog box enter **sfo01-m01fd-mgmt** as the name to label the folder and click **OK**.
 - d Repeat this step to create the remaining folders.
- 3 Move the vCenter Server and Platform Services Controller virtual machines to the **sfo01-m01fd-mgmt** folder.
 - a In the Navigator, click **VMs and Templates** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Expand the **Discovered Virtual Machines** folder.
 - c Drag **sfo01m01vc01**, **sfo01m01psc01**, and **sfo01w01psc01** to the **sfo01-m01fd-mgmt** folder.
- 4 Delete the Discovered Virtual Machines folder.
 - a In the Navigator, click **VMs and Templates** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Right-click the **Discovered Virtual Machines** folder and choose **Remove from Inventory**.
 - c On the Confirm Remove dialog, click **Yes**.

Create Anti-Affinity Rules for the Platform Services Controller in Region A

Anti-Affinity rules prevent virtual machines from running on the same host. This helps to maintain redundancy in the event of host failures.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, select **Hosts and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- 3 Select the **sfo01-m01-mgmt01** cluster and click the **Configure** tab.
- 4 Under the Configuration group of settings, select **VM/Host Rules**.
- 5 On the VM/Host Rules page, click the **Add** button to create a new VM/Hosts Rule.
- 6 In the Create VM/Host Rule dialog, enter **anti-affinity-rule-psc** in the Name field, ensure the Enable rule checkbox is selected, select **Separate Virtual Machines** from the Type drop down menu, and click the **Add** button.
- 7 In the Add Rule Member dialog, select **sfo01m01psc01** and **sfo01w01psc01** and click **OK**.
- 8 Click **OK** to create the rule.

Create VM Groups to Define Startup Order in the Management Cluster in Region A

VM Groups allow you to define the startup order of virtual machines. Startup orders are used during vSphere HA events such that vSphere HA powers on virtual machines in the correct order.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, select **Host and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- 3 Create a VM Group for the Platform Services Controllers.
 - a Select the **sfo01-m01-mgmt01** cluster and click the **Configure** tab.
 - b On the Configure page, click **VM/Host Groups**.
 - c On the VM/Host Groups page, click the **Add** button.
 - d In the Create VM/Host Group dialog, enter **Platform Services Controllers** in the Name field, select **VM Group** from the Type drop down, and click the **Add** button.
 - e In the Add VM/Host Group Member dialog, select **sfo01m01psc01** and **sfo01w01psc01** and click **OK**.
 - f On the Create VM/Host Group dialog, click **OK** to create.
- 4 Create a VM Group for the vCenter Server virtual machine.
 - a Select the **sfo01-m01-mgmt01** cluster and click the **Configure** tab.
 - b On the Configure page, click **VM/Host Groups**.
 - c On the VM/Host Groups page, click the **Add** button.
 - d In the Create VM/Host Group dialog, enter **vCenter Servers** in the Name field, select **VM Group** from the Type drop down, and click the **Add** button.
 - e In the Add VM/Host Group Member dialog, select **sfo01m01vc01** and click **OK**.
 - f On the Create VM/Host Group dialog, click **OK** to create.
- 5 Create a Rule to power on the Platform Services Controllers followed by the vCenter Servers.
 - a Select the **sfo01-m01-mgmt01** cluster and click the **Configure** tab.
 - b On the Configure page, click **VM/Host Rules**.
 - c On the VM/Host Rules page, click the **Add** button.
 - d In the Create VM/Host Rule dialog, enter **SDDC Management Virtual Machines** in the Name field, ensure the Enable rule check box is selected, select **Virtual Machines to Virtual Machines** from the Type drop down.
 - e Select **Platform Services Controllers** from the First restart VMs in VM group drop down.
 - f Select **vCenter Servers** from the Then restart VMs in VM group and click **OK**.

Deploy and Configure the Management Cluster NSX Instance in Region A

This design uses two separate NSX instances per region. One instance is tied to the Management vCenter Server, and the other instance is tied to the Compute vCenter Server. Deploy and configure the NSX instance for the management cluster in Region A.

Procedure

- 1 [Deploy the NSX Manager for the Management Cluster NSX Instance in Region A](#) on page 43
For this implementation NSX Manager and vCenter Server have a one-to-one relationship. For every instance of NSX Manager, there is one connected vCenter Server.
- 2 [Deploy the NSX Controllers for the Management Cluster NSX Instance in Region A](#) on page 46
After the NSX Manager is successfully connected to the Management vCenter Server, you must promote it to the primary role and deploy the three NSX Controller nodes that form the NSX Controller cluster.
- 3 [Assign Licensing for NSX Instance for Region A](#) on page 48
Assign licensing for the NSX instance in Region A.
- 4 [Prepare the ESXi Hosts in the Management Cluster for NSX in Region A](#) on page 48
You must install the NSX kernel modules on the management cluster ESXi hosts to be able to use NSX.
- 5 [Configure the NSX Logical Network for the Management Cluster in Region A](#) on page 49
After all the deployment tasks are ready, you must configure the NSX logical network.
- 6 [Update the Host Profile for the Management Cluster in Region A](#) on page 51
After you configure NSX logical networking on the management hosts in Region A, update the host profile of the management cluster and remediate the hosts to align their configuration.
- 7 [Deploy the Platform Services Controllers Load Balancer in Region A](#) on page 51
You configure load balancing for all services and components related to Platform Services Controllers (PSC) using an NSX Edge load balancer.
- 8 [Configure NSX Dynamic Routing in the Management Cluster in Region A](#) on page 58
NSX for vSphere creates a network virtualization layer on top of which all virtual networks are created. This layer is an abstraction between the physical and virtual networks. You configure NSX dynamic routing within the management cluster, deploying two NSX Edge devices and a Universal Distributed Logical Router (UDLR).
- 9 [Distributed Firewall Configuration for Management Applications](#) on page 76
Configuring a distributed firewall for use with your SDDC increases the security level of your environment by allowing only the network traffic that is required for the SDDC to run. The firewall rules you define allow access to management applications.
- 10 [Test the Management Cluster NSX Configuration in Region A](#) on page 81
Test the configuration of the NSX logical network using a ping test. A ping test checks if two hosts in a network can reach each other.
- 11 [Deploy Application Virtual Networks in Region A](#) on page 82
Deploy the application virtual networks.
- 12 [Deploy the NSX Load Balancer in Region A](#) on page 86
Deploy a load balancer for use by management applications connected to the application virtual network, Mgmt-xRegion01-VXLAN.

Deploy the NSX Manager for the Management Cluster NSX Instance in Region A

For this implementation NSX Manager and vCenter Server have a one-to-one relationship. For every instance of NSX Manager, there is one connected vCenter Server.

First assign a domain service account that NSX uses to the vCenter Server Administrator role. After that deploy the NSX Manager virtual appliance for the management cluster. After the NSX Manager is deployed connect it to the Management vCenter Server instance.

Procedure

- 1 [Assign an NSX Domain Service Account and Deploy the NSX Manager Appliance in Region A](#) on page 43
Assign a domain service account for use by NSX to access the vCenter Server Administrator role.
- 2 [Connect NSX Manager to the Management vCenter Server in Region A](#) on page 45
After you deploy the NSX Manager virtual appliance for the management cluster, you connect the NSX Manager to the Management vCenter Server.
- 3 [Assign Administrative Access to NSX in Region A](#) on page 46
Assign the administrator@vsphere.local account access to NSX.

Assign an NSX Domain Service Account and Deploy the NSX Manager Appliance in Region A

Assign a domain service account for use by NSX to access the vCenter Server Administrator role.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, click **Administration** and click **Global Permissions**.
- 3 Click the **Add permission** icon.
- 4 In the Global Permission Root - Add Permission dialog box, click **Add**.
- 5 In the Select Users/Groups dialog box, select **rainpole.local** from the **Domain** drop-down menu.
- 6 In the search box, enter **svc-nsxmanager** and press **Enter**.
- 7 Select **svc-nsxmanager** and click **Add**.
- 8 Click **OK**.
- 9 In the Global Permission Root - Add Permission dialog box, select **Administrator** as the Assigned Role and select the **Propagate to children** check box.
- 10 Click **OK**.
- 11 In the Navigator, expand the entire **sfo01m01vc01.sfo01.rainpole.local** control.
- 12 Right-click the **sfo01-m01-mgmt01** cluster and click **Deploy OVF Template**.

- 13 On the Select template page, click the **Browse** button, select the VMware NSX Manager .ova file and click **Next**.
- 14 On the Select name and location page, enter the following settings, and click **Next**.

Setting	Value
Name	sfo01m01nsx01
Datacenter or folder	sfo01-m01fd-nsx

- 15 On the Select a resource page, select the following values, and click **Next**.

Setting	Value
Cluster	sfo01-m01-mgmt01

- 16 On the Review details page, review the **extra configuration option** message, and click **Next**.
- 17 On the Accept license agreements page, click **Accept**, and click **Next**.
- 18 On the Select storage page, enter the following settings and click **Next**.

Setting	Value
Select virtual disk format	Thin provision
VM storage policy	vSAN Default Storage Policy
Datastore	sfo01-m01-vsan01

- 19 On the Select networks page, under Destination Network, select **sfo01-m01-vds01-management** and click **Next**.
- 20 On the Customize template page, expand the different options, enter the following settings, and click **Next**.

Setting	Value
DNS Server List	172.16.11.5,172.16.11.4
Domain Search List	sfo01.rainpole.local
Default IPv4 Gateway	172.16.11.253
Hostname	sfo01m01nsx01.sfo01.rainpole.local
Network 1 IPv4 Address	172.16.11.65
Network 1 Netmask	255.255.255.0
Enable SSH	Selected
NTP Server List	<ul style="list-style-type: none"> ■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local
CLI "admin" User Password / enter	mgmtnsx_admin_password
CLI "admin" User Password / confirm	mgmtnsx_admin_password
CLI Privilege Mode Password / enter	mgmtnsx_privilege_password
CLI Privilege Mode Password / confirm	mgmtnsx_privilege_password
VMware Customer Experience Improvement Program	Selected

- 21 On the Ready to complete page, review your configuration and click **Finish**.
- 22 In the Navigator, expand the entire **sfo01m01vc01.sfo01.rainpole.local** tree, select the **sfo01m01nsx01** virtual machine, and click the **Power on** button.

Connect NSX Manager to the Management vCenter Server in Region A

After you deploy the NSX Manager virtual appliance for the management cluster, you connect the NSX Manager to the Management vCenter Server.

Procedure

- 1 Log in to the Management NSX Manager appliance user interface.
 - a Open a Web browser and go to **https://sfo01m01nsx01.sfo01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>nsx_manager_admin_password</i>

- 2 Click **Manage vCenter Registration**.
- 3 Under Lookup Service URL, click **Edit**.
- 4 In the Lookup Service URL dialog box, enter the following settings and click **OK**.

Setting	Value
Lookup Service Host	sfo01psc01.sfo01.rainpole.local
Lookup Service Port	443
SSO Administrator User Name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 5 In the Trust Certificate? dialog, click **Yes**.
- 6 Under vCenter Server, click **Edit**.
- 7 In the vCenter Server dialog, enter the following settings, and click **OK**.

Setting	Value
vCenter Server	sfo01m01vc01.sfo01.rainpole.local
vCenter User Name	svc-nsxmanager@rainpole.local
Password	<i>svc-nsxmanager_password</i>

- 8 In the Trust Certificate? dialog, click **Yes**.
- 9 Wait for the Status indicators for the Lookup Service URL and vCenter Server to change to the Connected status.

Assign Administrative Access to NSX in Region A

Assign the administrator@vsphere.local account access to NSX.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	svc-nsxmanager@rainpole.local
Password	svc-nsxmanager_password

- 2 In the Navigator, click **Networking & Security** and click **NSX Managers**.
- 3 Under NSX Managers, click the **172.16.11.65** instance.
- 4 Click the **Manage** tab and click **Users**.
- 5 Click the **Add** icon.
- 6 On the Identify User page, select the **Specify a vCenter user** radio button, enter **administrator@vsphere.local** in the text box, and click **Next**.
- 7 On the Select Roles page, select the **Enterprise Administrator** radio button and click **Finish**.

Deploy the NSX Controllers for the Management Cluster NSX Instance in Region A

After the NSX Manager is successfully connected to the Management vCenter Server, you must promote it to the primary role and deploy the three NSX Controller nodes that form the NSX Controller cluster.

You must deploy every node only after the previous one is successfully deployed.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Promote the NSX Manager to the primary role.
 - a Under Inventories, click **Networking & Security**.
 - b In the Navigator, click **Installation**.
 - c On the Management tab, select the **172.16.11.65** instance.
 - d Click the **Actions** menu and click **Assign Primary Role**.
 - e In the 172.16.11.65 - Assign Primary Role dialog, click **Yes**.

- 3 Configure an IP pool for the NSX Controller cluster.
 - a In the Navigator, click **NSX Managers**.
 - b Under NSX Managers, click the **172.16.11.65** instance.
 - c Click the **Manage** tab, click **Grouping Objects**, click **IP Pools**, and click the **Add New IP Pool** icon.
 - d In the Add Static IP Pool dialog, enter the following settings and click **OK**.

Setting	Value
Name	sfo01-mgmt01-nsxc01
Gateway	172.16.11.253
Prefix Length	24
Primary DNS	172.16.11.5
Secondary DNS	172.16.11.4
DNS Suffix	sfo01.rainpole.local
Static IP Pool	172.16.11.118-172.16.11.120

- 4 Deploy the NSX Controller cluster.
 - a In the Navigator, click **Networking & Security** to go back, and click **Installation**.
 - b Under NSX Controller nodes, click the **Add** icon to deploy three NSX Controller nodes with the same configuration.
 - c In the Add Controller page, enter the following settings and click **OK**.

You configure a password only during the deployment of the first controller. The other controllers will use the same password.

Setting	Value
Name	<ul style="list-style-type: none"> ■ sfo01m01nsxc01 for controller 1 ■ sfo01m01nsxc02 for controller 2 ■ sfo01m01nsxc03 for controller 3
NSX Manager	172.16.11.65
Datacenter	sfo01-m01dc
Cluster/Resource Pool	sfo01-m01-mgmt01
Datastore	sfo01-m01-vsan01
Folder	sfo01-m01fd-nsx
Connected To	sfo01-m01-vds01-management
IP Pool	sfo01-mgmt01-nsxc01
Password	<i>mgmtnsx_controllers_password</i>
Confirm Password	<i>mgmtnsx_controllers_password</i>

- d After the Status of the controller node changes to **Connected**, repeat the step and deploy the two remaining NSX Controller nodes in the controller cluster with the same configuration.
- 5 Configure DRS affinity rules for the NSX Controller nodes.
 - a Go back to the Home page.
 - b In the Navigator, click **Hosts and Clusters**, and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
 - c Select the **sfo01-m01-mgmt01** cluster, and click the **Configure** tab.

- d Under Configuration, click **VM/Host Rules**.
- e Click **Add**.
- f In the sfo01-m01-mgmt01 - Create VM/Host Rule dialog, enter the following settings and click **OK**.

Setting	Value
Name	anti-affinity-rule-nsxc
Enable rule	Selected
Type	Separate Virtual Machine

- g In the Add Rule Member dialog, select the check box next to each of the three NSX Controller virtual machines and click **OK**.
- h In the sfo01-m01-mgmt01 - Create VM/Host Rule dialog, click **OK**.

Assign Licensing for NSX Instance for Region A

Assign licensing for the NSX instance in Region A.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Click the **Home** icon above the Navigator and select **Administration**.
- 3 On the Administration page, click **Licenses** and click the **Licenses** tab.
- 4 Click the **Create New Licenses** icon to add license keys.
 - a On the Enter license keys page, enter license keys for **NSX**, and click **Next**.
 - b On the Edit license name page, enter License name and click **Next**.
 - c On the Ready to complete page, review your entries and click **Finish**.
- 5 Assign the newly added licenses to NSX.
 - a Click the **Home** icon above the Navigator and choose the **Administration** menu item.
 - b On the Administration page, under Licensing and select **Licenses**.
 - c Under Licenses, click on the **Assets** tab, then click the **Solutions** tab.
 - d Select **NSX for vSphere**, and click the **Assign License** icon.
 - e On the NSX for vSphere - Assign Assign License page select the license you created in step 2 and click **OK**.

Prepare the ESXi Hosts in the Management Cluster for NSX in Region A

You must install the NSX kernel modules on the management cluster ESXi hosts to be able to use NSX.

NSX kernel modules packaged in VIB files run within the hypervisor kernel and provide services such as distributed routing, distributed firewall, and VXLAN bridging capabilities.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Install the NSX kernel modules on the management cluster ESXi hosts.
 - a In the Navigator, click **Networking & Security**.
 - b Click **Installation**, and click the **Host Preparation** tab.
 - c Select **172.16.11.65** from the **NSX Manager** drop-down menu.
 - d Under Installation Status, click **Install** for the **sfo01-m01-mgmt01** cluster and click **Yes** in the confirmation dialog box.
- 3 Verify that the Installation Status column displays the NSX version for all hosts in the cluster, confirming that the NSX kernel modules are successfully installed.

Configure the NSX Logical Network for the Management Cluster in Region A

After all the deployment tasks are ready, you must configure the NSX logical network.

To configure the NSX logical network, you perform the following tasks:

- Configure the Segment ID allocation.
- Configure the VXLAN networking.
- Configure the transport zone.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Configure the Segment ID allocation.
 - a In the Navigator, click **Networking & Security**.
 - b Click **Installation**, click **Logical Network Preparation**, and click **Segment ID**.

- c Select **172.16.11.65** from the **NSX Manager** drop-down menu.
- d Click **Edit**, enter the following settings, and click **OK**.

Setting	Value
Segment ID pool	5000-5200
Enable Multicast addressing	Selected
Multicast addresses	239.1.0.0-239.1.255.255
Universal Segment ID Pool	30000-39000
Enable Universal Multicast addressing	Selected
Universal Multicast addresses	239.2.0.0-239.2.255.255

3 Configure the VXLAN networking.

- a Click the **Host Preparation** tab.
- b Under VXLAN, click **Not Configured** on the sfo01-m01-mgmt01 row, enter the following settings, and click **OK**.

Setting	Value
Switch	sfo01-m01-vds01
VLAN	1614
MTU	9000
VMKNic IP Addressing	Use DHCP
VMKNic Teaming Policy	Load Balance - SRCID
VTEP	2

4 Configure the transport zone.

- a On the Installation page, click the **Logical Network Preparation** tab and click **Transport Zones**.
- b Select **172.16.11.65** from the **NSX Manager** drop-down menu.
- c Click the **New Transport zone** icon.
- d In the New Transport Zone dialog, enter the following settings and click **OK**.

Setting	Value
Mark this object for Universal Synchronization	Selected
Name	Mgmt Universal Transport Zone
Replication mode	Hybrid
Select clusters that will be part of the Transport Zone	sfo01-m01-mgmt01

- e Right click **Mgmt Universal Transport Zone**, choose **Enable CDO mode**, and click **Yes** in the dialog to enable CDO mode.

Update the Host Profile for the Management Cluster in Region A

After you configure NSX logical networking on the management hosts in Region A, update the host profile of the management cluster and remediate the hosts to align their configuration.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password
- 2 Update the host profile to the management cluster.
 - a In the Navigator, select **Policies and Profiles**.
 - b Click Host Profiles, right-click **sfo01-m01-mgmt01**, and select **Copy Settings from Host**.
 - c Select **sfo01m01esx01.sfo01.rainpole.local**, click **OK**.
- 3 Verify compliance and remediate the management hosts in Region A.
 - a On the Policies and Profiles page, click the **sfo01-m01hp-mgmt01** host profile.
 - b On the **Monitor** tab, click the **Compliance** tab.
 - c Select **sfo01-m01-mgmt01** in the Host/Cluster column and click **Check Host Profile Compliance**.
This compliance test shows that the first host is Compliant, but the other hosts are Not Compliant.
 - d Click each of the non-compliant hosts, click **Remediate Hosts Based on its Host Profile**.
 - e In the Remediate Hosts Based on its Host Profile wizard, enter **Host Name** if prompted for **NetStack Instance vxlan->DNS configuration**, and click **Next**.
 - f On the Ready to complete page, click **Finish**.
All hosts have Compliant status in the Host Compliance column.

Deploy the Platform Services Controllers Load Balancer in Region A

You configure load balancing for all services and components related to Platform Services Controllers (PSC) using an NSX Edge load balancer.

Procedure

- 1 [Deploy the Platform Services Controller NSX Load Balancer in Region A](#) on page 52
The first step in deploying load balancing for the Platform Services Controller is to deploy the edge services gateway.
- 2 [Create Platform Services Controller Application Profiles in Region A](#) on page 54
Create an application profile to define the behavior of a particular type of network traffic. After configuring a profile, you associate the profile with a virtual server. The virtual server then processes traffic according to the values specified in the profile. Using profiles enhances your control over managing network traffic, and makes traffic-management tasks easier and more efficient.

3 [Create Platform Services Controller Server Pools in Region A](#) on page 55

A server pool consists of backend server members. After you create a server pool, you associate a service monitor with the pool to manage and share the backend servers flexibly and efficiently.

4 [Create Virtual Servers in Region A](#) on page 56

After load balancing is set up, the NSX load balancer distributes network traffic across multiple servers. When a virtual server receives a request, it chooses the appropriate pool to send traffic to. Each pool consists of one or more members. You create virtual servers for all of the configured server pools.

5 [Update DNS Records for the Platform Services Controller Load Balancer in Region A](#) on page 57

You must modify the DNS Address in Region A after setting up load balancing.

Deploy the Platform Services Controller NSX Load Balancer in Region A

The first step in deploying load balancing for the Platform Services Controller is to deploy the edge services gateway.

Procedure

1 Log in to vCenter Server by using the vSphere Web Client.

- a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
- b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

2 Click **Networking & Security**.

3 In the Navigator, click **NSX Edges**.

4 Select **172.16.11.65** from the NSX Manager drop-down menu.

5 Click the **Add** icon tab to create an NSX Edge.

The New NSX Edge wizard appears.

6 On the Name and description page, enter the following settings and click **Next**.

Setting	Value
Install Type	Edge Services Gateway
Name	sfo01psc01
Hostname	sfo01psc01.sfo01.rainpole.local
Deploy NSX Edge	Selected
Enable High Availability	Selected

7 On the Settings page, enter the following settings and click **Next**.

Setting	Value
User Name	admin
Password	<i>edge_admin_password</i>
Enable SSH access	Selected
Enable FIPS mode	Deselected

Setting	Value
Enable auto rule generation	Selected
Edge Control Level logging	INFO

- 8 On the Configure deployment page, perform the following configuration steps and click **Next**.
 - a Select **sfo01-m01dc**, from the **Datacenter** drop-down menu.
 - b Click **Large** to specify the Appliance Size.
 - c Click the **Add** icon, enter the following settings, and click **OK**.

Setting	Value
Resource pool	sfo01-m01-mgmt01
Datastore	sfo01-m01-vsan01
Folder	sfo01-m01fd-nsx

- d To create a second appliance, click the **Add** icon again, make the same selections in the Add NSX Edge Appliance dialog, click **OK** and then click **Next**.
- 9 On the Configure interfaces page, click the **Add** icon to configure the sfo01psc01 interface, enter the following settings, click **OK**, and click **Next**.

Setting	Value
Name	sfo01psc01
Type	Internal
Connected To	sfo01-m01-vds01-management
Connectivity Status	Connected
Primary IP Address	172.16.11.71
Subnet Prefix Length	24
MTU	9000
Send ICMP Redirect	Selected

- 10 On the Default gateway settings page, enter the following settings and click **Next**.

Setting	Value
Gateway IP	172.16.11.1
MTU	9000

- 11 On the Firewall and HA page, select the following settings and click **Next**.

Setting	Value
Configure Firewall default policy	Selected
Default Traffic Policy	Accept
Logging	Disable
vNIC	any
Declare Dead Time	15

- 12 On the Ready to complete page, review the configuration settings you entered and click **Finish**.

- 13 Enable HA logging.
 - a In the Navigator, click **NSX Edges**.
 - b Select **172.16.11.65** from the **NSX Manager** drop-down menu.
 - c Double-click the device labeled **sfo01psc01**.
 - d Click the **Manage** tab and click the **Settings** tab.
 - e Click **Change** in the HA Configuration window.
 - f Select the **Enable Logging** checkbox and click **OK**.
- 14 Enable the Load Balancer service.
 - a In the Navigator, click **NSX Edges**.
 - b Select **172.16.11.65** from the **NSX Manager** drop-down menu.
 - c Double-click the device labeled **sfo01psc01**.
 - d Click the **Manage** tab, click the **Load Balancer** tab, click **Global Configuration**, and click **Edit**.
- 15 In the Edit load balancer global configuration dialog, select **Enable Load Balancer** and click **OK**.

Create Platform Services Controller Application Profiles in Region A

Create an application profile to define the behavior of a particular type of network traffic. After configuring a profile, you associate the profile with a virtual server. The virtual server then processes traffic according to the values specified in the profile. Using profiles enhances your control over managing network traffic, and makes traffic-management tasks easier and more efficient.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 From the **NSX Manager** drop-down menu, select **172.16.11.65** as the NSX Manager and double-click the **sfo01psc01** NSX Edge to manage its network settings.
- 5 Click the **Manage** tab, click **Load Balancer**, and select **Application Profiles**.
- 6 Click the **Add** icon and in the New Profile dialog, enter the following values and click **OK**.

Setting	Value	Value
Name	psc-tcp	psc-https
Type	TCP	HTTPS
Enable SSL Passthrough	Deselected	Selected
Persistence	Source IP	Source IP
Expires in (Seconds)	60	60

- 7 Click **OK** to save the configuration.

Create Platform Services Controller Server Pools in Region A

A server pool consists of backend server members. After you create a server pool, you associate a service monitor with the pool to manage and share the backend servers flexibly and efficiently.

Repeat this procedure to create two server pools. Use the values indicated in the procedure to create the first and second server pools.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 From the **NSX Manager** drop-down menu, select **172.16.11.65** as the NSX Manager and double-click the **sfo01psc01** NSX Edge to manage its network settings.
- 5 Click the **Manage** tab, click **Load Balancer**, and select **Pools**.
- 6 Click the **Add** icon and in the New Pool dialog box, enter the following values and click **OK**.

Setting	Value	Value
Name	psc-https-443	psc-tcp-389
Algorithm	ROUND-ROBIN	ROUND-ROBIN
Monitors	default_tcp_monitor	default_tcp_monitor

- 7 New Members dialog box, click the **Add** icon to add the first pool member.
- 8 In the **New Member** dialog box, enter the following values, and click **OK**.

Setting	Values for First Server Pool	Values for Second Server Pool
Enable Member	Selected	Selected
Name	sfo01m01psc01	sfo01m01psc01
IP Address/VC Container	sfo01m01psc01	sfo01m01psc01
Port		
Monitor Port	443	389
Weight	1	1

- 9 Under **Members**, click the **Add** icon to add the second pool member.

- 10 In the New Member dialog box, enter the following values, click **OK** and click **OK** to save the Platform Services Controller Pool.

Setting	Values for First Server Pool	Values for Second Server Pool
Enable Member	Selected	Selected
Name	sfo01w01psc01	sfo01w01psc01
IP Address/VC Container	sfo01w01psc01	sfo01w01psc01
Port		
Monitor Port	443	389
Weight	1	1

- 11 Repeat the procedure to create the remaining server pool.

Create Virtual Servers in Region A

After load balancing is set up, the NSX load balancer distributes network traffic across multiple servers. When a virtual server receives a request, it chooses the appropriate pool to send traffic to. Each pool consists of one or more members. You create virtual servers for all of the configured server pools.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 From the **NSX Manager** drop-down menu, select **172.16.11.65** as the NSX Manager and double-click the **sfo01psc01** NSX Edge to manage its network settings.
- 5 Click the **Manage** tab, click **Load Balancer**, and select **Virtual Servers**.
- 6 Click the **Add** icon, and in the New Virtual Server dialog box configure the values for the virtual server you are adding, and click **OK**.

Setting	Value	Value
Enable Virtual Server	Selected	Selected
Application Profile	psc-tcp	psc-https
Name	psc-tcp-389	psc-https-443
Description	389-LDAP,2012-Control Interface,2014-RPC Port,2020-Authentication,636-SSL LDAP	Data from the vSphere Web Client
IP Address	172.16.11.71	172.16.11.71
Protocol	TCP	HTTPS
Port	389,636,2012,2014,2020	443
Default Pool	psc-tcp-389	psc-https-443

- 7 Repeat [Step 6](#) to create a virtual server for each component. Upon completion, verify that you have successfully entered the virtual server names and their respective configuration values.

Update DNS Records for the Platform Services Controller Load Balancer in Region A

You must modify the DNS Address in Region A after setting up load balancing.

For the Platform Services Controller Load Balancer, you edit the DNS entry of sfo01psc01.sfo01.rainpole.local to point to the virtual IP address (VIP) of the Load Balancer (172.16.11.71) instead of pointing to the IP address of mgmt01spc01.

Procedure

- 1 Log in to DNS server **dc01sfo.lsfo01.rainpole.local** that resides in the sfo01.rainpole.local domain.
- 2 Open the Windows **Start** menu, enter **dns** in the **Search** text box and press Enter.
The DNS Manager dialog box appears.
- 3 In the DNS Manager dialog box, under **Forward Lookup Zones**, select the **sfo01.rainpole.local** domain and locate the sfo01psc01 record on the right.
- 4 Double-click the **sfo01psc01** record, change the IP address of the record from 172.16.11.61 to **172.16.11.71**, and click **OK**.

Setting	Value
Fully Qualified domain name (FQDN)	sfo01psc01.sfo01.rainpole.local
IP Address	172.16.11.71
Update Associated Pointer (PTR) record	Selected

Configure NSX Dynamic Routing in the Management Cluster in Region A

NSX for vSphere creates a network virtualization layer on top of which all virtual networks are created. This layer is an abstraction between the physical and virtual networks. You configure NSX dynamic routing within the management cluster, deploying two NSX Edge devices and a Universal Distributed Logical Router (UDLR).

Procedure

- 1 [Create a Universal Logical Switch for Use as the Transit Network in the Management Cluster in Region A](#) on page 59
Create a universal logical switch for use as the transit network.
- 2 [Deploy NSX Edge Devices for North-South Routing in Region A](#) on page 59
Deploy two NSX Edge devices for North-South Routing.
- 3 [Disable the Firewall Service in Region A](#) on page 62
Disable the firewall of the NSX Edge devices, this is required for equal-cost multi-path (ECMP) to operate correctly.
- 4 [Enable and Configure Routing in Region A](#) on page 63
Enable Border Gateway Protocol (BGP) to exchange routing information between the NSX Edge services gateways.
- 5 [Verify Peering of Upstream Switches and Establishment of BGP in Region A](#) on page 69
The NSX Edge devices need to establish a connection to each of its upstream BGP switches before BGP updates can be exchanged. Verify that the NSX Edges devices are successfully peering, and that BGP routing has been established.

- 6 [Deploy the Universal Distributed Logical Router in Region A](#) on page 71
Deploy the universal distributed logical router (UDLR).
- 7 [Configure Universal Distributed Logical Router for Dynamic Routing in Region A](#) on page 73
Configure the universal distributed logical router (UDLR) to use dynamic routing.
- 8 [Verify Establishment of BGP for the Universal Distributed Logical Router in Region A](#) on page 75
The universal distributed logical routers (UDLR) needs to establish a connection to Edge Services Gateway before BGP updates can be exchanged. Verify that the UDLR is successfully peering, and that BGP routing has been established.

Create a Universal Logical Switch for Use as the Transit Network in the Management Cluster in Region A

Create a universal logical switch for use as the transit network.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **Logical Switches**.
- 4 Select the instance labeled **172.16.11.65**.
- 5 Click the **New Logical Switch** icon.
- 6 In the New Logical Switch dialog, enter the following settings and click **OK**.

Setting	Value
Name	Universal Transit Network
Transport Zone	Mgmt Universal Transport Zone
Replication Mode	Hybrid

Deploy NSX Edge Devices for North-South Routing in Region A

Deploy two NSX Edge devices for North-South Routing.

Perform this procedure two times to deploy two NSX Edge devices.

Table 2-5. NSX Edge Devices

NSX Edge Device	Device Name
NSX Edge Device 1	sfo01m01esg01
NSX Edge Device 2	sfo01m01esg02

Table 2-6. NSX Edge Interfaces Settings

Interface	Primary IP Address sfo01m01esg01	Primary IP Address sfo01m01esg02
Uplink01	172.27.11.2	172.27.11.3
Uplink02	172.27.12.3	172.27.12.2
sfo01m01udlr01	192.168.10.1	192.168.10.2

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.65** from the **NSX Manager** drop-down menu.
- 5 Click the **Add** icon to deploy a new NSX Edge.

The **New NSX Edge** wizard appears.

- a On the Name and description page, enter the following settings and click **Next**.

Settings	sfo01m01esg01	sfo01m01esg02
Install Type	Edge Service Gateway	Edge Service Gateway
Name	sfo01m01esg01	sfo01m01esg02
Hostname	sfo01m01esg01.sfo01.rainpole.local	sfo01m01esg02.sfo01.rainpole.local
Deploy NSX Edge	Selected	Selected
Enable High Availability	Deselected	Deselected

- b On the Settings page, enter the following settings and click **Next**.

Settings	Value
User Name	admin
Password	edge_admin_password
Enable SSH access	Selected
Enable FIPS mode	Deselected
Enable auto rule generation	Selected
Edge Control Level logging	INFO

- c On the Configure deployment page, click **Large** to specify the Appliance Size and click the **Add** icon.

- d In the Add NSX Edge Appliance dialog, enter the following settings, click **OK**, and click **Next**.

Setting	Value
Cluster/Resource Pool	sfo01-m01-mgmt01
Datastore	sfo01-m01-vsan01
Folder	sfo01-m01fd-nsx

- e On the Configure interfaces page, click the **Add** icon to configure the Uplink01 interface, enter the following settings, and click **OK**.

Setting	sfo01m01esg01	sfo01m01esg02
Name	Uplink01	Uplink01
Type	Uplink	Uplink
Connected To	sfo01-m01-vds01-uplink01	sfo01-m01-vds01-uplink01
Connectivity Status	Connected	Connected
Primary IP Address	172.27.11.2	172.27.11.3
Subnet Prefix Length	24	24
MTU	9000	9000
Send ICMP Redirect	Selected	Selected

- f Click the **Add** icon to configure the Uplink02 interface, enter the following settings, and click **OK**.

Setting	sfo01m01esg01	sfo01m01esg02
Name	Uplink02	Uplink02
Type	Uplink	Uplink
Connected To	sfo01-m01-vds01-uplink02	sfo01-m01-vds01-uplink02
Connectivity Status	Connected	Connected
Primary IP Address	172.27.12.3	172.27.12.2
Subnet Prefix Length	24	24
MTU	9000	9000
Send ICMP Redirect	Selected	Selected

- g Click the **Add** to configure the UDLR interface, enter the following settings click **OK**, and click **Next**.

Setting	sfo01m01esg01	sfo01m01esg02
Name	sfo01m01udlr01	sfo01m01udlr01
Type	Internal	Internal
Connected To	Universal Transit Network	Universal Transit Network
Connectivity Status	Connected	Connected
Primary IP Address	192.168.10.1	192.168.10.2
Subnet Prefix Length	24	24
MTU	9000	9000
Send ICMP Redirect	Selected	Selected

- h On the Default gateway settings page, deselect the **Configure Default Gateway** check box and click **Next**.

- i On the Firewall and HA page, click **Next**.
- j On the Ready to complete page, review the configuration settings that you entered and click **Finish**.
- 6 Repeat this procedure to configure another NSX edge using the settings for the second NSX Edge device.
- 7 Configure DRS affinity rules for the Edge Services Gateways.
 - a Go back to the Home page.
 - b In the Navigator, click **Hosts and Clusters**, and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
 - c Select the **sfo01-m01-mgmt01** cluster, and click the **Configure** tab.
 - d Under Configuration, click **VM/Host Rules**.
 - e Click **Add**.
 - f In the sfo01-m01-mgmt01 - Create VM/Host Rule dialog box, enter the following settings and click **Add**.

Setting	Value
Name	anti-affinity-rule-ecmpedges
Enable rule	Selected
Type	Separate Virtual Machine
 - g In the Add Rule Member dialog box, select the check box next to each of the two, newly deployed NSX ESGs and click **OK**.
 - h In the sfo01-m01-mgmt01 - Create VM/Host Rule dialog, click **OK**.

Disable the Firewall Service in Region A

Disable the firewall of the NSX Edge devices, this is required for equal-cost multi-path (ECMP) to operate correctly.

You repeat this procedure two times for each of the NSX Edge devices: sfo01m01esg01 and sfo01m01esg02.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.65** from the **NSX Manager** drop-down menu.
- 5 Double-click the **sfo01m01esg01** NSX Edge device.
- 6 Click the **Manage** tab, then click **Firewall**.
- 7 In the Firewall page, click the **Disable** button.
- 8 Click **Publish Changes**.

- 9 Repeat this procedure for the NSX Edge device sfo01m01esg02.

Enable and Configure Routing in Region A

Enable Border Gateway Protocol (BGP) to exchange routing information between the NSX Edge services gateways.

Repeat this procedure two times to enable BGP for both NSX Edge devices: sfo01m01esg01 and sfo01m01esg02.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.65** from the **NSX Manager** drop-down menu.
- 5 Double-click the **sfo01m01esg01** NSX Edge device.
- 6 Click the **Manage** tab, and click **Routing**.
- 7 On the Global Configuration page, enter the following settings.
 - a Click **Enable** for ECMP.
 - b Click **Edit** for Dynamic Routing Configuration.
 - c Select **Uplink01** as the Router ID and click **OK**.
 - d Click **Publish Changes**.

- 8 On the **Routing** tab, select **Static Routes** to configure it.
- a Click the **Add** icon, enter the following settings, and click **OK**.

Setting	Value
Network	192.168.11.0/24
Next Hop	192.168.10.3
Interface	sfo01m01udlr01
MTU	9000
Admin Distance	210

- b Click the **Add** icon, enter the following settings, and click **OK**.

Setting	Value
Network	192.168.31.0/24
Next Hop	192.168.10.3
Interface	sfo01m01udlr01
MTU	9000
Admin Distance	210

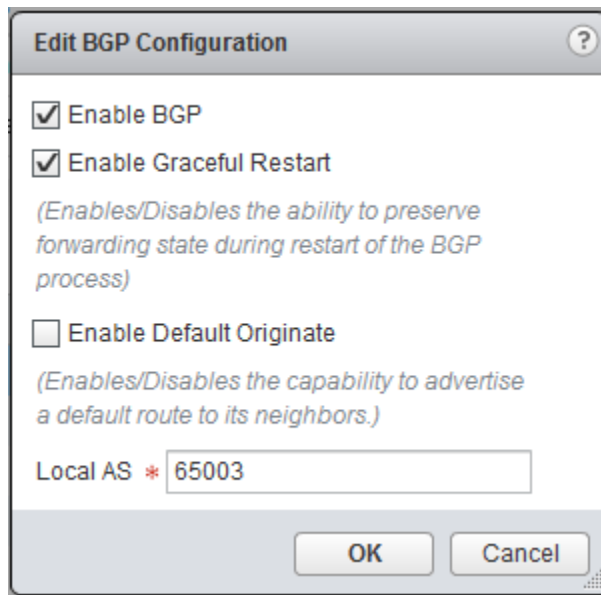

- c Click the **Add** icon, enter the following settings, and click **OK**.

Setting	Value
Network	192.168.32.0/24
Next Hop	192.168.10.3
Interface	sfo01m01udlr01
MTU	9000
Admin Distance	210

- d Click **Publish Changes**.

- 9 On the **Routing** tab, select **BGP** to configure it.
 - a Click **Edit**, enter the following settings, and click **OK**.

Setting	Value
Enable BGP	Selected
Enable Graceful Restart	Selected
Enable Default Originate	Deselected
Local AS	65003

- b On the BGP page, click the **Add** icon to add a neighbor.

The New Neighbor dialog box appears. You add two neighbors: the first Top of Rack Switch and the second Top of Rack Switch.

- c In the New Neighbor dialog box, enter the following values and click **OK**.

Setting	Value
IP Address	172.27.11.1
Remote AS	65001
Weight	60
Keep Alive Time	4
Hold Down Time	12
Password	<i>BGP_password</i>

New Neighbour ?

IP Address : * 172.27.11.1

Remote AS : * 65001

Weight : 60

Keep Alive Time : 4 (Seconds)

Hold Down Time : 12 (Seconds)

(BGP Keep alive timer value needs to be one third of hold down timer)

- h Click **Publish Changes**.
- The three neighbors you added appear in the Neighbors table.
- 10 On the **Routing** tab, select **Route Redistribution** to configure it.
- On the Route Redistribution page, click the **Edit** button.
 - In the Change redistribution settings dialog, select the **BGP** check box and click **OK**.
 - Click the **Add** icon for Route Redistribution table.

- d In the New Redistribution criteria dialog box, enter the following settings and click **OK**.

Setting	Value
Prefix	Any
Learner Protocol	BGP
OSPF	Deselected
Static routes	Selected
Connected	Selected
Action	Permit

- e Click **Publish Changes**.

The route redistribution configuration appears in the Route Redistribution table.

- 11 Repeat this procedure for the NSX Edge device **sfo01m01esg02**.

Verify Peering of Upstream Switches and Establishment of BGP in Region A

The NSX Edge devices need to establish a connection to each of its upstream BGP switches before BGP updates can be exchanged. Verify that the NSX Edges devices are successfully peering, and that BGP routing has been established.

You repeat this procedure two times for each of the NSX Edge devices: **sfo01m01esg01** and **sfo01m01esg02**.

Procedure

- 1 Log in to the NSX Edge device using a Secure Shell (SSH) client.
 - a Open an SSH connection to the NSX Edge device **sfo01m01esg01**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	edge_admin_password

- 2 Run the `show ip bgp neighbors` command to display information about the BGP connections to neighbors.

The BGP State will display `Established, UP` if you have peered with the upstream switches.

Note You have not yet created the universal distributed logical router (UDLR), so it will not display the `Established, UP` status message.

```
sfo01m01esg01.sfo01.rainpole.local
BGP neighbor is 172.28.12.1, remote AS 65001,
BGP state = Established, up
Hold time is 12, Keep alive interval is 4 seconds

BGP neighbor is 192.168.10.4, remote AS 65003,
BGP state = Established, up
Hold time is 3, Keep alive interval is 1 seconds
byte 1593
```

- 3 Run the `show ip route` command to verify that you are receiving routes using BGP, and that there are multiple routes to BGP learned networks.

You verify multiple routes to BGP learned networks by locating the same route using a different IP address. The IP addresses are listed after the word `via` in the right-side column of the routing table output. In the image below there are two different routes to the following BGP networks: `0.0.0.0/0` and `172.27.22.0/24`. You can identify BGP networks by the letter `B` in the left-side column. Lines beginning with `C` (connected) have only a single route.

```

```

- 4 Repeat this procedure for the NSX Edge device **sfo01m01esg02**.

Deploy the Universal Distributed Logical Router in Region A

Deploy the universal distributed logical router (UDLR).

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **<https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client>**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.65** from the **NSX Manager** drop-down menu.
- 5 Click the **Add** icon to create a new UDLR.

- 6 Complete the New NSX Edge wizard to deploy and configure the UDLR.
- a On the Name and description page, enter the following settings and click **Next**.

Setting	Value
Universal Logical (Distributed) Router	Selected
Name	sfo01m01udlr01
Hostname	sfo01m01udlr01.sfo01.rainpole.local
Deploy Edge Appliance	Selected
Enable High Availability	Selected

- b On the Settings page, enter the following settings and click **Next**.

Setting	Value
User Name	admin
Password	<i>udlr_admin_password</i>
Enable SSH access	Selected
Edge Control Level logging	INFO

- c On the Configure deployment page, click the **Add** icon.
- d In the Add NSX Edge Appliance dialog box, enter the following settings and click **OK**.

Setting	Value
Cluster/Resource Pool	sfo01-m01-mgmt01
Datastore	sfo01-m01-vsan01
Folder	sfo01-m01fd-nsx

- e On the Configure deployment page, click the **Add** icon a second time to add a second NSX Edge device.
- f In the Add NSX Edge Appliance dialog box, enter the following settings and click **OK**.

Setting	Value
Cluster/Resource Pool	sfo01-m01-mgmt01
Datastore	sfo01-m01-vsan01
Folder	sfo01-m01fd-nsx

- g On the Configure interfaces page, under HA Interface Configuration, click **Change** and connect to **sfo01-m01-vds01-management**.
- h On the Configure interfaces page, click the **Add** icon to configure Primary IP Address.

Options	Description
Setting	Value
Primary IP Address	1.1.1.10
Subnet Prefix Length	24

- i On the Configure interfaces page, under Configure interfaces of this NSX Edge, click the **Add** icon to configure interface.

- j In the Add Interface dialog box, enter the following settings, click **OK**, and click **Next**.

Setting	Value
Name	Uplink
Type	Uplink
Connected To	Universal Transit Network
Connectivity Status	Connected
Primary IP Address	192.168.10.3
Subnet Prefix Length	24
MTU	9000

- k On the Default gateway settings page, deselect **Configure Default Gateway** and click **Next**.
- l On the Ready to complete page, click **Finish**.

Configure Universal Distributed Logical Router for Dynamic Routing in Region A

Configure the universal distributed logical router (UDLR) to use dynamic routing.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.65** from the **NSX Manager** drop-down menu.
- 5 Enable HA logging.
 - a Double-click the device labeled **sfo01m01udlr01**.
 - b Click the **Manage** tab and click the **Settings** tab.
 - c Click **Change** in the HA Configuration window.
 - d Select the **Enable Logging** checkbox and click **OK**.
- 6 Configure the routing for the Universal Distributed Logical Router.
 - a Double-click **sfo01m01udlr01**.
 - b Click the **Manage** tab and click **Routing**.
 - c On the Global Configuration page, perform the following configuration steps.
 - d Click **Edit** under Routing Configuration, click **Edit**.
 - e Select the **Enable ECMP** check box, and click **OK**.
 - f Click **Edit** under Dynamic Routing Configuration, select **Uplink** as the Router ID, and click **OK**.
 - g Click **Publish Changes**.

- 7 On the left, select **BGP** to configure it.
 - a On the BGP page, click the **Edit** button.
 - b In the Edit BGP Configuration dialog box, enter the following settings and click **OK**.

Setting	Value
Enable BGP	Selected
Enable Graceful Restart	Selected
Local AS	65003

- c Click the **Add** icon to add a Neighbor.
 - d In the New Neighbor dialog box, enter the following values for both NSX Edge devices and click **OK**.

You repeat this step two times to configure the UDLR for both NSX Edge devices: sfo01m01esg02 and sfo01m01esg02.

Setting	sfo01m01esg01 Value	sfo01m01esg02 Value
IP Address	192.168.10.1	192.168.10.2
Forwarding Address	192.168.10.3	192.168.10.3
Protocol Address	192.168.10.4	192.168.10.4
Remote AS	65003	65003
Weight	60	60
Keep Alive Time	1	1
Hold Down Time	3	3
Password	<i>BGP_password</i>	<i>BGP_password</i>

- e Click **Publish Changes**.

- 8 On the left, select **Route Redistribution** to configure it.
 - a Click **Edit**.
 - b In the Change redistribution settings dialog box, enter the following settings and click **OK**.

Setting	Value
OSPF	Deselected
BGP	Selected

- c On the Route Redistribution page, select the default **OSPF** entry on the Route Redistribution table and click **Edit** button.
- d Select **BGP** from the **Learner Protocol** drop-down menu, and click **OK**.

- e Click **Publish Changes**.

Verify Establishment of BGP for the Universal Distributed Logical Router in Region A

The universal distributed logical routers (UDLR) needs to establish a connection to Edge Services Gateway before BGP updates can be exchanged. Verify that the UDLR is successfully peering, and that BGP routing has been established.

Procedure

- 1 Log in to the UDLR by using a Secure Shell (SSH) client.
 - a Open an SSH connection to **sfo01m01udlr01**, the UDLR whose peering and BGP configuration you want to verify.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>udlr_admin_password</i>

- 2 Run the `show ip bgp neighbors` command to display information about the BGP and TCP connections to neighbors.

The BGP State will display `Established, up` if you have successfully peered with the Edge Service Gateway.

```
BGP neighbor is 192.168.10.1, remote AS 65003,
BGP state = Established, up
Hold time is 3, Keep alive interval is 1 seconds
Neighbor capabilities:
  Route refresh: advertised and received
  Address family IPv4 Unicast:advertised and received
  Graceful restart Capability:advertised and received
  Restart remain time: 0
Received 228 messages, Sent 225 messages
Default minimum time between advertisement runs is 30 seconds
For Address family IPv4 Unicast:advertised and received
  Index 1 Identifier 0x83ddf8ac
  Route refresh request:received 0 sent 0
  Prefixes received 5 sent 1 advertised 1
Connections established 1, dropped 1
Local host: 192.168.10.4, Local port: 18332
Remote host: 192.168.10.1, Remote port: 179

BGP neighbor is 192.168.10.2, remote AS 65003,
BGP state = Established, up
Hold time is 3, Keep alive interval is 1 seconds
```

- 3 Run the `show ip route` command to verify that you are receiving routes using BGP, and that there are multiple routes to BGP learned networks.

You verify multiple routes to BGP learned networks by locating the same route using a different IP address. The IP addresses are listed after the word `via` in the right-side column of the routing table output. In the image below there are two different routes to the following BGP networks: `0.0.0.0/0`, `172.27.11.0/24`, `172.27.12.0/24`, and `172.27.22.0/24`. You can identify BGP networks by the letter `B` in the left-side column. Lines beginning with `C` (connected) have only a single route.

```
NSX-edge-b6fb7e6a-ef26-41e1-bc06-c0519732ac7a-0> show ip route

Codes: 0 - OSPF derived, i - IS-IS derived, B - BGP derived,
C - connected, S - static, L1 - IS-IS level-1, L2 - IS-IS level-2,
IA - OSPF inter area, E1 - OSPF external type 1, E2 - OSPF external type 2,
N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2

Total number of routes: 6

B    0.0.0.0/0          [20/0]    via 192.168.10.1
B    0.0.0.0/0          [20/0]    via 192.168.10.2
C    169.254.1.0/30     [0/0]
B    172.27.11.0/24     [200/0]   via 192.168.10.1
B    172.27.11.0/24     [200/0]   via 192.168.10.2
B    172.27.12.0/24     [200/0]   via 192.168.10.1
B    172.27.12.0/24     [200/0]   via 192.168.10.2
B    172.27.22.0/24     [20/0]    via 192.168.10.1
B    172.27.22.0/24     [20/0]    via 192.168.10.2
C    192.168.10.0/24    [0/0]    via 192.168.10.4
```

Distributed Firewall Configuration for Management Applications

Configuring a distributed firewall for use with your SDDC increases the security level of your environment by allowing only the network traffic that is required for the SDDC to run. The firewall rules you define allow access to management applications.

You define explicit rules for the distributed firewall which allow access to management applications.

Procedure

- 1 [Add vCenter Server Instances to the NSX Distributed Firewall Exclusion List](#) on page 77
Exclude vCenter Server from all of your distributed firewall rules. This ensures that network access between vCenter Server and NSX is not blocked.

- 2 [Create IP Sets for All Components of the Management Clusters in the SDDC](#) on page 77
Create IP sets for all management applications in the management clusters. You use the IP sets later to create security groups for use with the distributed firewall rules.
- 3 [Create Security Groups](#) on page 78
Create security groups for use in configuring firewall rules for the groups of applications in the SDDC.
- 4 [Create Distributed Firewall Rules](#) on page 80
A firewall rule consists of a section to segregate the firewall rules and the rule itself, which defines what network traffic is, or is not, blocked.

Add vCenter Server Instances to the NSX Distributed Firewall Exclusion List

Exclude vCenter Server from all of your distributed firewall rules. This ensures that network access between vCenter Server and NSX is not blocked.

You configure NSX Distributed Firewall using vCenter Server. If a rule prevents access between NSX Manager and vCenter Server, you will not be able to manage the distributed firewall. For this reason, you must exclude vCenter Server from all of your distributed firewall rules, ensuring that access between the two products is not blocked.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Exclude vCenter Server instances in Region A from firewall protection.
 - a In the Navigator, click **Networking & Security**.
 - b Click **NSX Managers** and select the **172.16.11.65** instance.
 - c Click **Manage** and then click **Exclusion List**.
 - d Click the **Add** button.
 - e Add **sfo01m01vc01** to the **Selected Objects** list, and click **OK**.

Create IP Sets for All Components of the Management Clusters in the SDDC

Create IP sets for all management applications in the management clusters. You use the IP sets later to create security groups for use with the distributed firewall rules.

You perform this procedure multiple times to configure all of the necessary IP sets. You allocate one IP set per group of applications. For applications that are load balanced include their VIP in the IP Set.

Table 2-7. IP Sets for the Management Clusters Components in the SDDC

Name	IP Addresses
Site Recovery Manager	<i>Site-Recovery-Manger_IP's</i>
Platform Services Controller Instances	<i>Platform-Service-Controller_IP's</i>
vCenter Server Instances	<i>vCenter-Server_IP's</i>
vSphere Replication	<i>vSphere-Replication_IP's</i>

Table 2-7. IP Sets for the Management Clusters Components in the SDDC (Continued)

Name	IP Addresses
vRealize Automation Appliances	<i>vRealize-Automation-Appliances_IP's</i>
vRealize Automation Windows	<i>vRealize-Automation-Windows_IP's</i>
vRealize Automation Proxy Agents	<i>vRealize-Automation-Proxy-Agents-IP's</i>
vRealize Business Server	<i>vRealize-Business_IP</i>
vRealize Business Data Collector	<i>vRealize-Business-Data-Collector_IP's</i>
vSphere Data Protection	<i>vSphere-Data-Protection_IP's</i>
vRealize Operations Manager	<i>vRealize-Operations-Manager_IP's</i>
vRealize Operations Manager Remote Collectors	<i>vRealize-Operations-Manager-Remote-Collectors_IP's</i>
vRealize Log Insight	<i>vRealize-Log-Insight_IP's</i>
Update Manager Download Service	<i>UMDS_IP's</i>
SDDC	<i>Management-VLAN_Subnets, Management-VXLAN_Subnets</i>
Administrators	<i>sfo01-m01-vds01-ext-manahement_Subnet</i>

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Create an IP set for Site Recovery Manger.
 - a In the Navigator, click **Networking & Security**.
 - b Click **NSX Managers** and select the **172.16.11.65** instance.
 - c Click **Manage**, click **Grouping Objects**, and click **IP Sets**.
 - d Click the **Add** icon.
 - e In the New IP Set dialog box, configure the values for the IP set that you are adding, and click **OK**.
For all IP sets that you configure, select the **Mark this object for Universal Synchronization** check box.

Setting	Value
Name	Site Recovery Manager
IP Addresses	172.16.11.124,172.17.11.124
Mark this object for Universal Synchronization	Selected

- 3 Repeat this procedure to create IP sets for all of the remaining components.

Create Security Groups

Create security groups for use in configuring firewall rules for the groups of applications in the SDDC.

A security group is a collection of assets (or objects) from your vSphere inventory that you group together.

You perform this procedure multiple times to configure all of the necessary security groups. In addition, you create the VMware Appliances and Windows Servers groups from the security groups you add in the previous repetitions of this procedure.

Table 2-8. Security Groups for the Management Clusters Components in the SDDC

Name	Object Type	Selected Object
Site Recovery Manager	IP Sets	Site Recovery Manager
Platform Services Controller Instances	IP Sets	Platform Services Controller Instances
vCenter Server Instances	IP Sets	vCenter Server Instances
vSphere Replication	IP Sets	vSphere Replication
vRealize Automation Appliances	IP Sets	vRealize Automation Appliances
vRealize Automation Windows	IP Sets	vRealize Automation Windows
vRealize Business Server	IP Sets	vRealize Business Server
vRealize Automation Proxy Agents	IP Sets	vRealize Automation Proxy Agents
vRealize Business Data Collector	IP Sets	vRealize Business Data Collector
vSphere Data Protection	IP Sets	vSphere Data Protection
vRealize Operations Manager	IP Sets	vRealize Operations Manager
vRealize Operations Manager Remote Collectors	IP Sets	vRealize Operations Manager Remote Collectors
vRealize Log Insight	IP Sets	vRealize Log Insight
Update Manager Download Service	IP Sets	Update Manager Download Service
SDDC	IP Sets	SDDC
Administrators	IP Sets	Administrators
Windows Servers	Security Groups	<ul style="list-style-type: none"> ■ Site Recovery Manager ■ vRealize Automation Windows ■ vRealize Automation Proxy Agents
VMware Appliances	Security Groups	<ul style="list-style-type: none"> ■ Platform Services Controller Instances ■ vCenter Server Instances ■ vSphere Replication ■ vRealize Automation Appliances ■ vRealize Business Server ■ vRealize Business Data Collector ■ vSphere Data Protection ■ vRealize Operations Manager ■ vRealize Operations Manager Remote Collectors ■ vRealize Log Insight

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **<https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client>**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the **Navigator**, click **Networking & Security** and click **NSX Managers**.
- 3 Select the **172.16.11.65** NSX Manager instance, and click the **Manage** tab.
- 4 Click **Grouping Objects**, select **Security Group**, and click the **Add new Security Group** icon.
The Add Security Group wizard appears.
- 5 On the Name and description page, enter **Site Recovery Manager** in the **Name** text box, select the **Mark this object for Universal Synchronization** check box, and click **Next**.
For all security groups that you configure, select the **Mark this object for Universal Synchronization** check box.
- 6 On the Select objects to include page, select **IP Sets** from the **Object Type** drop-down menu, select **Site Recovery Manager** from the list of available objects, click the **Add** button, and click **Next**.
- 7 On the Ready to Complete page, verify the configuration values that you entered and click **Finish**.
- 8 Repeat this procedure to create all of the necessary security groups.

Create Distributed Firewall Rules

A firewall rule consists of a section to segregate the firewall rules and the rule itself, which defines what network traffic is, or is not, blocked.

You create firewall rules that allow administrators to connect to the different VMware solutions, rules to allow user access to the vRealize Automation portal, and to provide external connectivity to the SDDC.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Add a section for the rules for the management applications.
 - a In the **Navigator**, click **Networking & Security** and click **Firewall**.
 - b From the **NSX Manager** drop-down menu, select **172.16.11.65**.
 - c Click the **Add Section** icon.
 - d In the Add New Section dialog box, enter **VMware Management Services** in the **Section Name** text box, select the **Mark this section for Universal Synchronization** check box, and click **Save**.
- 3 Create a distributed firewall rule to allow SSH access to administrators for the different VMware appliances.
 - a Click **Add rule** in the VMware Management Services section.
 - b In the **Name** cell of the new rule, click the **Edit** icon to change the rule name to **Allow SSH to admins**.
 - c Click the **Edit** icon in the **Source** column, change the **Object Type** to **Security Groups**, add **Administrators** to the **Selected Objects** list, and click **OK**.
 - d Click the **Edit** icon in the **Destination** column, change the **Object Type** to **Security Groups**, add **VMware Appliances** and **Update Manager Download Service** to the **Selected Objects** list, and click **OK**.

- e Click the **Edit** icon in the **Service** column, enter **SSH** in the filter, add **SSH** to the **Selected Objects** list, and click **OK**.
 - f Click **Publish Changes**.
- 4 Repeat the previous step to create the following distributed firewall rules.

Name	Source	Destination	Service / Port
Allow vRA Portal to end users	* any	vRealize Automation Appliances	HTTP, HTTPS
Allow vRA Console Proxy to end users	* any	vRealize Automation Appliances	TCP:8444
Allow SDDC to any	SDDC	* any	* any
Allow PSC to admins	Administrators	Platform Services Controller Instances	HTTPS
Allow SSH to admins	Administrators	VMware Appliances	SSH
Allow RDP to admins	Administrators	Windows Servers	RDP
Allow Orchestrator to admins	Administrators	vRealize Automation	TCP:8281,8283
Allow vROPs to admins	Administrators	vRealize Operations Manager	HTTP, HTTPS
Allow vRLI to admins	Administrators	vRealize Log Insight	HTTP, HTTPS
Allow VAMI to admins	Administrators	VMware Appliances	TCP:5480
Allow VDP to admins	Administrators	VMware Appliances	TCP:8543

- 5 Click **Publish Changes**.
- 6 Change the default rule action from allow to block for Region A.
 - a Under **Default Section Layer3**, in the **Action** column for the Default Rule, change the action to **Block** and click **Save**.
 - b Click **Publish Changes**.
- 7 Change the default rule action from allow to block for Region B.
 - a From the **NSX Manager** drop-down menu, select **172.17.11.65**.
 - b Under **Default Section Layer3**, in the **Action** column for the Default Rule, change the action to **Block** and click **Save**.
 - c Click **Publish Changes**.

By allowing only the network traffic that is required by the SDDC to pass, network security is improved.

Test the Management Cluster NSX Configuration in Region A

Test the configuration of the NSX logical network using a ping test. A ping test checks if two hosts in a network can reach each other.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Use the Ping Monitor to test connectivity.
 - a Select **Home**, then select **Networking & Security**.
 - b Under Logical Switches, double-click **Universal Transit Network**.
 - c Click the **Monitor** tab and select **Ping**.
 - d From the **Source host** drop-down menu select **sfo01m01esx01.sfo01.rainpole.local**.
 - e Leave the **Size of test packet** with the default of VXLAN standard.
 - f From the **Destination host** drop-down menu select **sfo01m01esx03.sfo01.rainpole.local**.
 - g Click **Start Test**.

The host-to-host ping test results are displayed in the **Results** text box. Verify that there are no error messages.

Deploy Application Virtual Networks in Region A

Deploy the application virtual networks.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Create a Universal Logical Switch for workloads that move between sites.
 - a Under Inventories, click **Networking & Security**.
 - b In the Navigator, click **Logical Switches**.
 - c Select **172.16.11.65** from the **NSX Manager** drop-down menu.

- d Click the **New Logical Switch** icon to create a new Logical Switch.
- e In the New Logical Switch dialog box, enter the following settings and click **OK**.

Setting	Value
Name	Mgmt-xRegion01-VXLAN
Transport Zone	Mgmt Universal Transport Zone
Replication Mode	Hybrid

New Logical Switch

Name: * Mgmt-xRegion01-VXLAN

Description:

Transport Zone: * Mgmt Universal Transport Zone [Change](#) [Remove](#)

Replication mode:

☐ Multicast
Multicast on Physical network used for VXLAN control plane.

☐ Unicast
VXLAN control plane handled by NSX Controller Cluster.

☒ Hybrid
Optimized Unicast mode. Offloads local traffic replication to physical network.

☒ Enable IP Discovery

☐ Enable MAC Learning

OK **Cancel**

- 3 Create a Universal Logical Switch for workloads specific to Region A.
 - a On the Logical Switches page, click the **Add** icon to create a new Logical Switch.
 - b In the New Logical Switch dialog box, enter the following settings, and click **OK**.

Setting	Value
Name	Mgmt-RegionA01-VXLAN
Transport Zone	Mgmt Universal Transport Zone
Replication Mode	Hybrid

- 4 Connect Mgmt-xRegion01-VXLAN to the Universal Distributed Logical Router.
 - a On the Logical Switches page, select the **Mgmt-xRegion01-VXLAN** Logical Switch.
 - b Click the **Connect Edge** icon.
 - c On the Connect an Edge page, select **sfo01m01udlr01** and click **Next**.
 - d On the Edit NSX Edge Interface page, enter the following settings and click **Next**.

Setting	Value
Name	Mgmt-xRegion01-VXLAN
Type	Internal
Connected To	Mgmt-xRegion01-VXLAN
Connectivity Status	Connected
Primary IP Address	192.168.11.1
Subnet Prefix Length	24

- e On the Ready to complete page, click **Finish**.
- 5 Connect Mgmt-RegionA01-VXLAN to the Universal Distributed Logical Router.
 - a On the Logical Switches page, select the **Mgmt-RegionA01-VXLAN** Logical Switch.
 - b Click the **Connect Edge** icon.

- c On the Connect an Edge page, select **sfo01m01udlr01** and click **Next**.
- d On the Edit NSX Edge Interface page, enter the following settings and click **Next**.

Setting	Value

Deploy the NSX Load Balancer in Region A

Deploy a load balancer for use by management applications connected to the application virtual network, Mgmt-xRegion01-VXLAN.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.65** from the **NSX Manager** drop-down menu.
- 5 Click the **Add** icon to create an NSX Edge.
- 6 On the Name and description page, enter the following settings and click **Next**.

Setting	Value
Install Type	Edge Services Gateway
Name	sfo01m01lb01
Hostname	sfo01m01lb01.sfo01.rainpole.local
Deploy NSX Edge	Selected
Enable High Availability	Selected

- 7 On the Settings page, enter the following settings and click **Next**.

Setting	Value
User Name	admin
Password	edge_admin_password
Enable SSH access	Selected
Enable FIPS mode	Deselected
Enable auto rule generation	Selected
Edge Control Level logging	INFO

- 8 On the Configure deployment page, perform the following configuration steps and click **Next**.
 - a Select **sfo01-m01dc**, from the **Datacenter** drop-down menu.
 - b Click **Large** to specify the Appliance Size.

- c Click the **Add** icon, enter the following settings, and click **OK**.

Setting	Value
Resource pool	sfo01-m01-mgmt01
Datastore	sfo01-m01-vsan01
Folder	sfo01-m01fd-nsx

- d To create a second appliance, click the **Add** icon again, make the same selections in the New NSX Appliance dialog box, and click **OK**.
- 9 On the Configure interfaces page, click the **Add** icon to configure the OneArmLB interface, enter the following settings, click **OK**, and click **Next**.

Setting	Value
Name	OneArmLB
Type	Internal
Connected To	Mgmt-xRegion01-VXLAN
Connectivity Status	Connected
Primary IP Address	192.168.11.2

Firewall and HA

☒ **Configure Firewall default policy**

Default Traffic Policy: ☒ Accept ☐ Deny

Logging: ☐ Enable ☒ Disable

Configure HA parameters
Configuring HA parameters is mandatory for HA to work.

vNIC: * any

Declare Dead Time: 15 (seconds)

Management IPs:

Management IPs must be in CIDR format with /30 subnet and must not overlap with any vnic subnets.

Back Next Finish Cancel

- 12 On the Ready to complete page, review the configuration settings you entered and click **Finish**.
- 13 Enable HA logging.
 - a In the Navigator, click **NSX Edges**.
 - b Select **172.16.11.65** from the **NSX Manager** drop-down menu.
 - c Double-click the device labeled **sfo01m01lb01**.
 - d Click the **Manage** tab and click the **Settings** tab.
 - e Click **Change** in the HA Configuration window.
 - f Select the **Enable Logging** checkbox and click **OK**.
- 14 Enable the Load Balancer service.
 - a In the Navigator, click **NSX Edges**.
 - b Select **172.16.11.65** from the **NSX Manager** drop-down menu.
 - c Double-click the device labeled **sfo01m01lb01**.
 - d Click the **Manage** tab, click the **Load Balancer** tab, click **Global Configuration**, and click **Edit**.
 - e In the Edit Load balancer global configuration dialog, select **Enable Load Balancer** and click **OK**.

Deploy and Configure the Shared Edge and Compute Cluster Components in Region A

Deploy and configure the shared edge and compute cluster components.

Procedure

- 1 [Deploy the Compute vCenter Server Instance in Region A](#) on page 91
After you install and configure the external Platform Services Controller instance for the shared edge and compute cluster, you can now install the vCenter Server appliance and assign a license.
- 2 [Set SDDC Deployment Details on the Compute vCenter Server in Region A](#) on page 93
Set an identity of your SDDC deployment on the Compute vCenter Server in Region A. You can also use this identity as a label in tools for automated SDDC deployment.
- 3 [Add New vCenter Server Licenses in Region A](#) on page 93
(Optional) If a license was not assigned during deployment of the Management vCenter Server and ESXi hosts, you may add new licenses for this vCenter Server instance if needed.
- 4 [Add the Shared Edge and Compute vCenter to the vCenter Servers VM Group in Region A](#) on page 94
After the vCenter Server for the Shared Edge and Computer cluster is deployed it must be added to the vCenter VM Group.
- 5 [Exclude the Compute vCenter Server from the Distributed Firewall in Region A](#) on page 95
Exclude vCenter Server from all of your distributed firewall rules. This ensures that network access between vCenter Server and NSX is not blocked.
- 6 [Configure the Shared Edge and Compute Cluster in Region A](#) on page 95
After you deploy the Compute vCenter Server, you must create and configure the shared edge and compute cluster.
- 7 [Create a vSphere Distributed Switch for the Shared Edge and Compute Cluster in Region A](#) on page 98
After all ESXi hosts have been added to the cluster, create a vSphere Distributed Switch.
- 8 [Enable vSphere HA on the Shared Edge and Compute Cluster in Region A](#) on page 102
After vSphere vSphere Distributed Switch has been created and connected with all hosts, enable vSphere HA on the cluster.
- 9 [Change Advanced Options on the ESXi Hosts on the ESXi Hosts in the Shared Edge and Compute Cluster in Region A](#) on page 103
Change the default ESX Admins group to achieve greater levels of security by removing a known administrative access point.
- 10 [Mount NFS Storage for the Shared Edge and Compute Cluster in Region A](#) on page 104
You must mount an NFS datastore for the content library consumed by vRealize Automation for virtual machine provisioning.
- 11 [Create and Apply the Host Profile for the Shared Edge and Compute Cluster in Region A](#) on page 104
Host Profiles ensure all hosts in the cluster have the same configuration.
- 12 [Configure Lockdown Mode on All ESXi Hosts in Region A](#) on page 107
To increase security of your ESXi hosts, you put them in Lockdown mode, so that administrative operations can be performed only from vCenter Server.

Deploy the Compute vCenter Server Instance in Region A

After you install and configure the external Platform Services Controller instance for the shared edge and compute cluster, you can now install the vCenter Server appliance and assign a license.

Procedure

- 1 Start the vCenter Server Appliance Deployment wizard.
 - a Browse the vCenter Server Appliance ISO file.
 - b Open the <dvd-drive>:\vcsa-ui-installer\win32\Installer application file.
- 2 Complete the vCenter Server Appliance Deployment wizard to perform the first stage of the installation.
 - a Click **Install** to start the installation.
 - b Click **Next** on the Introduction page.
 - c On the End user license agreement page, select the **I accept the terms of the license agreement** check box and click **Next**.
 - d On the Select deployment type page, under External Platform Services Controller, select the **vCenter Server (Requires External Platform Services Controller)** radio button and click **Next**.
 - e On the Appliance deployment target page, enter the following settings and click **Next**.

Setting	Value
ESXi host or vCenter Server name	sfo01m01vc01.sfo01.rainpole.local
HTTPS port	443
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- f In the Certificate Warning dialog, click **Yes** to accept the host certificate.
- g On the Select folder page, choose **sfo01-m01fd-mgmt** and click **Next**.
- h On the Select compute resource page, choose the **sfo01-m01-mgmt01** cluster and click **Next**.
- i On the Set up appliance VM page, enter the following settings and click **Next**.

Setting	Value
VM name	sfo01w01vc01
Root password	<i>compvc_root_password</i>
Confirm root password	<i>compvc_root_password</i>

- j On the Select deployment size page, select **Large vCenter Server**, and click **Next**.
- k On the Select datastore page, select the **sfo01-m01-vsan01** datastore, select the **Enable Thin Disk Mode** check box, and click **Next**.

- 1 On the Configure network settings page, enter the following settings and click **Next**.

Setting	Value
Network	sfo01-m01-vds01-management
IP version	IPv4
IP assignment	static
System name	sfo01w01vc01.sfo01.rainpole.local
IP address	172.16.11.64
Subnet mask or prefix length	255.255.255.0
Default gateway	172.16.11.253
DNS servers	172.16.11.5,172.16.11.4

- m On the Ready to complete stage 1 page, review the configuration and click **Finish** to start the deployment.
 - n Once the deployment completes, click **Continue** to proceed to stage two of the installation.
- 3 Complete the Install - Stage 2: Set Up vCenter Server Appliance wizard to complete the second stage of the installation.
 - a Click **Next** on the Introduction page.
 - b On the Appliance configuration page, enter the following settings and click **Next**.

Setting	Value
Time synchronization mode	Synchronize time with NTP servers
NTP servers (comma-separated list)	ntp.sfo01.rainpole.local
SSH access	Enabled

- c On the SSO configuration page, enter the following settings and click **Next**.

Setting	Value
Platform Services Controller	sfo01psc01.sfo01.rainpole.local
HTTPS port	443
SSO domain name	vsphere.local
SSO password	<i>sso_password</i>

- d On the Ready to complete page, review the configuration and click **Finish**.
 - e Click **OK** on the Warning.
 - f On the Complete page, click **Close**.

Set SDDC Deployment Details on the Compute vCenter Server in Region A

Set an identity of your SDDC deployment on the Compute vCenter Server in Region A. You can also use this identity as a label in tools for automated SDDC deployment.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the **Home** menu of the vSphere Web Client, select **Global Inventory Lists**.
- 3 In the Navigator, click **vCenter Servers** under Resources.
- 4 Click the **sfo01w01vc01.sfo01.rainpole.local** vCenter Server object and click the **Configure** tab in the central pane.
- 5 Under the Settings pane, click **Advanced Settings** and click the **Edit** button.
- 6 In the Edit Advanced vCenter Server Settings dialog box, set the following value pairs one by one, clicking **Add** after each entry.

Name	Value
config.SDDC.Deployed.Type	VVD
config.SDDC.Deployed.Flavor	Standard
config.SDDC.Deployed.Version	4.1.0
config.SDDC.Deployed.Method	DIY

- 7 Click **OK** to close the window.

Add New vCenter Server Licenses in Region A

(Optional) If a license was not assigned during deployment of the Management vCenter Server and ESXi hosts, you may add new licenses for this vCenter Server instance if needed.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Click the **Home** icon above the Navigator and select **Administration**.
- 3 On the Administration page, click **Licenses** and click the **Licenses** tab.

- 4 Click the **Create New Licenses** icon to add license keys.
- 5 On the Enter license keys page, enter license keys for vCenter Server and ESXi, one per line, and click **Next**.
- 6 On the Edit license name page, enter a descriptive name for the license key, and click **Next**.
- 7 On the Ready to complete page, review your entries, and click **Finish**.
- 8 Assign the newly added licenses to the respective assets.
 - a Click the **Assets** tab and select **vCenter Server systems**.
 - b Select the **sfo01w01vc01.sfo01.rainpole.local** vCenter Server instance, and click the **Assign License** icon.
 - c Select the vCenter Server license that you entered in the previous step and click **OK**.

Add the Shared Edge and Compute vCenter to the vCenter Servers VM Group in Region A

After the vCenter Server for the Shared Edge and Computer cluster is deployed it must be added to the vCenter VM Group.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **<https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client>**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 In the Navigator, select **Hosts and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- 3 Select the **sfo01-m01-mgmt01** cluster and click **Configure**.
- 4 On the Configure page, click **VM/Host Groups**.
- 5 On the VM/Host Groups page, select the **vCenter Servers** VM Group.
- 6 Under VM/Host Group Members, click the **Add** button.
- 7 In the Add Group Member dialog, select **sfo01w01vc01** and click **OK**.

Exclude the Compute vCenter Server from the Distributed Firewall in Region A

Exclude vCenter Server from all of your distributed firewall rules. This ensures that network access between vCenter Server and NSX is not blocked.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, click **Networking & Security**.
- 3 Click **NSX Managers** and select the **172.16.11.65** instance.
- 4 Click **Manage** and then click **Exclusion List**.
- 5 Click the **Add** button.
- 6 Add **sfo01w01vc01** to the **Selected Objects** list, and click **OK**.

Configure the Shared Edge and Compute Cluster in Region A

After you deploy the Compute vCenter Server, you must create and configure the shared edge and compute cluster.

To create and configure the shared edge and compute cluster you perform the following procedures:

- Create the cluster.
- Configure DRS.
- Add the hosts to the cluster.
- Add the hosts to the active directory domain.
- Create resource pools.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Create a data center object.
 - a In the Navigator, click **Hosts and Clusters**.
 - b Right-click the **sfo01w01vc01.sfo01.rainpole.local** instance, and select **New Datacenter**.
 - c In the New Datacenter dialog, enter **sfo01-w01dc**, and click **OK**.

- 3 Create the shared edge and compute cluster.
 - a Right-click the **sfo01-w01dc** datacenter and click **New Cluster**.
 - b In the New Cluster wizard, enter the following values and click **OK**.

Setting		Value
Name		sfo01-w01-comp01
DRS	Turn ON	Selected
	Other DRS options	Default values
vSphere HA	Turn ON	Deselected
EVC		Set EVC mode to the lowest available setting supported for the hosts in the cluster
vSAN	Turn ON	Deselected

- 4 Add a host to the shared edge and compute cluster.
 - a Right-click the **sfo01-w01-comp01** cluster, and click **Add Host**.
 - b On the Name and location page, enter **sfo01w01esx01.sfo01.rainpole.local** in the **Host name or IP address** text box and click **Next**.
 - c On the Connection settings page, enter the following credentials, and click **Next**.

Setting		Value
User name		root
Password		<i>esxi_root_user_password</i>

- d In the Security Alert dialog, click **Yes**.
 - e On the Host summary page, review the host information and click **Next**.
 - f On the Assign license page, select the ESXi license key that you entered during the vCenter Server deployment and click **Next**.
 - g On the Lockdown mode page, click **Next**.
 - h On the Resource pool page, click **Next**.
 - i On the Ready to complete page, review your entries and click **Finish**.
- 5 Repeat the previous step to add the remaining hosts to the cluster.

Setting	Value
Host 2	sfo01w01esx02.sfo01.rainpole.local
Host 3	sfo01w01esx03.sfo01.rainpole.local
Host 4	sfo01w01esx04.sfo01.rainpole.local

- 6 Add an ESXi host to the active directory domain
 - a In the Navigator, click **Hosts and Clusters** and expand the entire **sfo01w01vc01.sfo01.rainpole.local** tree.
 - b Select the **sfo01w01esx01.sfo01.rainpole.local** host.
 - c Click the **Configure** tab.
 - d Under System, select **Authentication Services**.

- e In the Authentication Services panel, click the **Join Domain** button.
- f In the Join Domain dialog, enter the following settings and click **OK**.

Setting	Value
Domain	sfo01.rainpole.local
User name	ad_admin_acct@sfo01.rainpole.local
Password	ad_admin_password

- 7 Set the Active Directory Service to Start and stop with host.
 - a In the Navigator, click **Hosts and Clusters** and expand the entire **sfo01w01vc01.sfo01.rainpole.local** tree.
 - b Select the **sfo01w01esx01.sfo01.rainpole.local** host.
 - c Click the **Configure** tab.
 - d Under System, select **Security Profile**.
 - e Click the **Edit** button next to Services.
 - f Select the **Active Directory** service and change the **Startup Policy** to **Start and stop with host** and click **OK**.
- 8 Configure resource pools for the shared edge and compute cluster.
 - a Right-click the **sfo01-w01-comp01** cluster and select **New Resource Pool**.
 - b In the New Resource Pool dialog box, enter the following values and click **OK**.

Setting	Resource Pool 1	Resource Pool 2	Resource Pool 3
Name	sfo01-w01rp-sddc-edge	sfo01-w01rp-user-edge	sfo01-w01rp-user-vm
CPU-Shares	High	Normal	Normal
CPU-Reservation	0	0	0
CPU-Reservation Type	Expandable selected	Expandable selected	Expandable selected
CPU-Limit	Unlimited	Unlimited	Unlimited
Memory-Shares	Normal	Normal	Normal
Memory-Reservation	16 GB	0	0
Memory-Reservation type	Expandable selected	Expandable selected	Expandable selected
Memory-Limit	Unlimited	Unlimited	Unlimited

- 9 Repeat the previous step to add two more additional resource pools.

Create a vSphere Distributed Switch for the Shared Edge and Compute Cluster in Region A

After all ESXi hosts have been added to the cluster, create a vSphere Distributed Switch.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Create a vSphere Distributed Switch for the shared edge and compute cluster.
 - a In the Navigator, click **Networking** and expand the **sfo01w01vc01.sfo01.rainpole.local** tree.
 - b Right-click the **sfo01-w01dc** datacenter and select **Distributed Switch > New Distributed Switch** to start the New Distributed Switch wizard .
 - c On the Name and location page, enter **sfo01-w01-vds01** as the name and click **Next**.
 - d On the Select version page, ensure the **Distributed switch version: 6.5.0** radio button is selected and click **Next**.
 - e On the Edit settings page, enter the following values and click **Next**.

Setting	Value
Number of uplinks	2
Network I/O Control	Enabled
Create a default port group	Deselected

- f On the Ready to complete page, review your entries and click **Finish**.
- 3 Edit the settings of the sfo01-w01-vds01 distributed switch.
 - a Right-click the **sfo01-w01-vds01** distributed switch and select **Settings > Edit Settings**.
 - b Click the **Advanced** tab.
 - c Enter **9000** as MTU (Bytes) value and click **OK**.

- 4 Create port groups in the sfo01-w01-vds01 distributed switch.
 - a Right-click the **sfo01-w01-vds01** distributed switch, and select **Distributed Port Group > New Distributed Port Group**.
 - b Create port groups with the following settings and click **Next**.

Port Group Name	Port Binding	VLAN Type	VLAN ID
sfo01-w01-vds01-management	Static binding	VLAN	1631
sfo01-w01-vds01-vmotion	Static binding	VLAN	1632
sfo01-w01-vds01-vsan	Static binding	VLAN	1633
sfo01-w01-vds01-nfs	Static binding	VLAN	1625
sfo01-w01-vds01-uplink01	Static binding	VLAN	1635
sfo01-w01-vds01-uplink02	Static binding	VLAN	2713

NOTE You create the VXLAN port group at a later time during the configuration of NSX Manager.

- c On the Ready to complete page, review your entries and click **Finish**.
 - d Repeat this step for each port group.
- 5 Change the Port Groups to use the Route Based on Physical NIC load teaming algorithm.
 - a Right-click the **sfo01-w01-vds01** distributed switch and select **Distributed Port Groups > Manage Distributed Port Groups**.
 - b On the Select port group policies page, select the **Teaming and failover** check box and click **Next**.
 - c On the Select port groups page, click the **Select distributed port groups** button, add all port groups except sfo01-w01-vds01-uplink01 and sfo01-w01-vds01-uplink02, click **OK** and click **Next**.
 - d On the Teaming and failover page, select **Route based on physical NIC load** under Load Balancing and click **Next**.
 - e Click **Finish**.

- 6 Configure the uplinks for the sfo01-w01-vds01-uplink01 and sfo01-w01-vds01-uplink02 port groups.
 - a Right click the **sfo01-w01-vds01-uplink01** port group, and click **Edit Settings**.
 - b Select **Teaming and Failover**.
 - c Move **dvUplink2** to **Unused uplinks** and click **OK**.
 - d Right click the **sfo01-w01-vds01-uplink02** port group, and click **Edit Settings**.
 - e Select **Teaming and Failover**.
 - f Move **dvUplink1** to **Unused uplinks** and click **OK**.
- 7 Connect the ESXi host, sfo01w01esx01.sfo01.rainpole.local, to the sfo01-w01-vds01 distributed switch by migrating its VMkernel and virtual machine network adapters.
 - a Right-click the **sfo01-w01-vds01** distributed switch, and click **Add and Manage Hosts**.
 - b On the Select task page, select **Add hosts** and click **Next**.
 - c On the Select hosts page, click **New hosts**.
 - d In the Select new hosts dialog, select **sfo01w01esx01.sfo01.rainpole.local**, click **OK** and click **Next**.
 - e On the Select network adapter tasks page, ensure both **Manage physical adapters** and **Manage VMkernel adapters** check boxes are checked and click **Next**.
 - f On the Manage physical network adapters page, click **vmnic1**, and click **Assign uplink**.
 - g In the Select an Uplink for vmnic1 dialog, select **Uplink 1** and click **OK**.
 - h On the Manage physical network adapters page, click **Next**.
- 8 Configure the VMkernel network adapters, edit the existing, and add new adapters as needed.
 - a On the Manage VMkernel network adapters page, click **vmk0**, and click **Assign port group**.
 - b Select **sfo01-w01-vds01-management** and click **OK**.
 - c On the Manage VMkernel network adapters page, click **On this switch** and click **New adapter**.
 - d On the Add Networking page, select **Select and existing network**, browse to select the **sfo01-w01-vds01-nfs** port group, click **OK**, and click **Next**.
 - e Under Port properties click **Next**.
 - f Under IPv4 settings select **Use static IPv4 settings**, enter the IP address **172.16.25.101** and the subnet **255.255.255.0**, and click **Finish**.
 - g On the Manage VMkernel network adapters page, click **Next**.
 - h On the Analyze impact page, click **Next**.
 - i On the Ready to complete page, review your entries and click **Finish**.
- 9 Create the vMotion VMkernel adapter.
 - a In the Navigator, click **Host and Clusters** and expand the **sfo01w01vc01.sfo01.rainpole.local** tree.
 - b Click on **sfo01w01esx01.sfo01.rainpole.local**.
 - c Click the **Configure** tab then select **VMkernel adapters**.
 - d Click the **Add host networking** icon and select **VMkernel Network Adapter** and click **Next**.
 - e On the Select target device page, select **Select an existing network**, browse to select the **sfo01-w01-vds01-vmotion** port group, click **OK**, and click **Next**.
 - f On the Port properties page, select **vMotion** from the TCP/IP stack dropdown and click **Next**.

- g On the IPv4 settings page, select **Use static IPv4 settings**, enter the IP address **172.16.32.101**, enter the subnet **255.255.255.0**, and click **Next**.
 - h Click **Finish**.
- 10 Configure the MTU on the vMotion VMkernel adapter.
 - a Select the vMotion VMkernel adapter created in the previous step, and click **Edit Settings**.
 - b Click the NIC settings page.
 - c Enter **9000** for the MTU value and click **OK**.
 - 11 Configure the vMotion TCP/IP stack.
 - a Click **TCP/IP configuration**.
 - b Select **vMotion** and click the **Edit TCP/IP stack configuration** icon.
 - c Click on **Routing** and enter **172.16.32.253** for the **default gateway** address and click **OK**.
 - 12 Define Network I/O Control shares for the different traffic types on the sfo01-w01-vds01 distributed switch.
 - a In the Navigator, click **Networking**, and click the **sfo01-w01dc** datacenter.
 - b Click the **sfo01-w01-vds01** distributed switch.
 - c Click the **Configure** tab, under **Resource Allocation** click **System traffic**.
 - d Under System Traffic, edit each of the following traffic types with the values from the table.

Traffic Type	Value
vSAN Traffic	High
NFS Traffic	Low
vMotion Traffic	Low
vSphere Replication Traffic	Low
Management Traffic	Normal
vSphere Data Protection Backup Traffic	Low
Virtual Machine Traffic	High
Fault Tolerance Traffic	Low
iSCSI Traffic	Low

- 13 Migrate the last physical adapter from the standard switch to the sfo01-w01-vds01 distributed switch.
 - a In the Navigator, click **Networking** and expand the **sfo01-w01dc** datacenter.
 - b Right-click the **sfo01-w01-vds01** distributed switch and select **Add and Manage hosts**.
 - c On the Select task page, select **Manage host networking** and click **Next**.
 - d On the Select hosts page, click **Attached hosts**.
 - e On the Select member hosts dialog, select **sfo01w01esx01.sfo01.rainpole.local** and click **OK**.
 - f On the Select hosts page, click **Next**.
 - g On the Select network adapter tasks page, select **Manage Physical adapters** only and click **Next**.
 - h On the Manage physical network adapters page, under **sfo01w01esx01.sfo01.rainpole.local**, select **vmnic0**, and click **Assign uplink**.
 - i In the Select an Uplink for vmnic0 dialog, select **Uplink 2**, click **OK** and click **Next**.

- j On the Analyze Impact page, click **Next**.
- k On the Ready to complete page, click **Finish**.
- 14 Enable vSphere Distributed Switch Health Check.
 - a In the Navigator, click **Networking** and expand the **sfo01-w01dc** datacenter.
 - b Select the **sfo01-w01-lds01** distributed switch and click the **Configure** tab.
 - c In the Navigator under Settings, select **Health check** and click the **Edit** button.
 - d Select **Enabled** for **VLAN and MTU** and **Teaming and failover** and click **OK**.
- 15 Remove the vSphere Standard Switch.
 - a In the Navigator, click on **Hosts and Clusters** and expand the **sfo01w01vc01.sfo01.rainpole.local** tree.
 - b Click on **sfo01w01esx01.sfo01.rainpole.local** and then click on **Configure**.
 - c On the Configure page select **Virtual switches**.
 - d On the Virtual switches page, select **vSwitch0**, and then click the **Remove selected standard switch** button.
 - e On the Remove Standard Switch dialog , click **Yes**.

Enable vSphere HA on the Shared Edge and Compute Cluster in Region A

After vSphere vSphere Distributed Switch has been created and connected with all hosts, enable vSphere HA on the cluster.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, click **Hosts and Clusters** and expand the **sfo01w01vc01.sfo01.rainpole.local** tree.
- 3 Select the **sfo01-w01-comp01** cluster.
- 4 Click the **Configure** tab and click **vSphere Availability**.
- 5 Click **Edit**.
- 6 In the sfo01-w01-comp01 - Edit Cluster Settings dialog, select the **Turn on vSphere HA** check box.
- 7 Click **Failures and Responses**, select the following values.

Setting	Value
Enable Host Monitoring	Selected
Host Failure Response	Restart VM's
Response for Host Isolation	Power off and restart VM's
Datastore with PDL	Disabled

Setting	Value
Datastore with APD	Disabled
VM Monitoring	VM Monitoring Only

- 8 Click **Admission Control**, select the following values.

Setting	Value
Host failures cluster tolerates	1
Define host failover capacity by	Cluster resource percentage
Override calculated failover capacity	Deselected
Performance degradation VMs tolerate	100%

- 9 Click **OK**.

Change Advanced Options on the ESXi Hosts on the ESXi Hosts in the Shared Edge and Compute Cluster in Region A

Change the default ESX Admins group to achieve greater levels of security by removing a known administrative access point.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Change the default ESX Admins group.
 - a In the Navigator, click **Hosts and Clusters** and expand the **sfo01w01vc01.sfo01.rainpole.local** tree.
 - b Select the **sfo01w01esx01.sfo01.rainpole.local** host.
 - c Click the **Configure** tab and under System, click **Advanced System Settings**.
 - d Click the **Edit** button.
 - e In the filter box, enter **esxAdmins** and wait for the search results.
 - f Change the value of **Config.HostAgent.plugins.hostsvc.esxAdminsGroup** to **SDDC-Admins** and click **OK**.
- 3 Disable the SSH warning banner.
 - a In the Navigator, click **Hosts and Clusters** expand the **sfo01w01vc01.sfo01.rainpole.local** tree.
 - b Select the **sfo01w01esx01.sfo01.rainpole.local** host.
 - c Click the **Configure** tab and under System, click **Advanced System Settings**.
 - d Click the **Edit** button.
 - e In the filter box, enter **ssh** and wait for the search results.
 - f Change the value of **UserVars.SuppressShellWarning** to **1** and click **OK**.

Mount NFS Storage for the Shared Edge and Compute Cluster in Region A

You must mount an NFS datastore for the content library consumed by vRealize Automation for virtual machine provisioning.

Create a datastore for the sfo01-w01-comp01 cluster.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, click **Hosts and Clusters** and expand the **sfo01w01esx01.sfo01.rainpole.local** tree.
- 3 Click on **sfo01w01esx01.sfo01.rainpole.local**.
- 4 Click on the **Datastores** tab.
- 5 Click the **Create a New Datastore** icon.
- 6 On the Type page, select **NFS** and click **Next**.
- 7 On the Select NFS version page, select **NFS 3** and click **Next**.
- 8 On the Name and configuration page, enter the following datastore information and click **Next**.

Setting	Value
Datastore Name	sfo01-w01-lib01
Folder	/V2D_vRA_ComputeA_1TB
server	172.16.25.251

- 9 On the Ready to complete page, review the configuration and click **Finish**.

Create and Apply the Host Profile for the Shared Edge and Compute Cluster in Region A

Host Profiles ensure all hosts in the cluster have the same configuration.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Create a Host Profile from sfo01w01esx01.sfo01.rainpole.local.
 - a In the Navigator, select **Hosts and Clusters** and expand the **sfo01w01vc01.sfo01.rainpole.local** tree.
 - b Right-click the ESXi host **sfo01w01esx01.sfo01.rainpole.local** and choose **Host Profiles > Extract Host Profile**.
 - c In the Extract Host Profile page, enter **sfo01-w01hp-comp01** for the Name and click **Next**.
 - d In the Ready to complete page, click **Finish**.
- 3 Attach the Host Profile to the shared edge and compute cluster.
 - a In the Navigator, select **Hosts and Clusters** and expand the **sfo01w01vc01.sfo01.rainpole.local** tree.
 - b Right-click on the **sfo01-w01-comp01** cluster, and choose **Host Profiles > Attach Host Profile**.
 - c In the Attach Host Profile dialog, select the **sfo01-w01hp-comp01** Host Profile, select the **Skip Host Customization** check box, and click **Finish**.
- 4 Create Host Customizations for the hosts in the shared edge and compute cluster.
 - a In the Navigator, select **Policies and Profiles**.
 - b Click on **Host Profiles**, then right-click on **sfo01-w01hp-comp01**, and choose **Export Host Customizations**.
 - c In the dialog, click **Save**.
 - d Choose a file location to save the *sfo01-w01hp-comp01_host_customizations.csv* file.
 - e Open the *sfo01-w01hp-comp01_host_customizations.csv* in Excel.

- f Edit the file using the following configuration value.

ESXi Host	Active Directory Configuration Password	Active Directory Configuration Username	NetStack Instance defaultTcpipStack->DNS configuration Name for this host
sfo01w01esx01.sfo01.rainpole.local	ad_admin_password	ad_admin_acct@sfo01.rainpole.local	sfo01w01esx01
sfo01w01esx02.sfo01.rainpole.local	ad_admin_password	ad_admin_acct@sfo01.rainpole.local	sfo01w01esx02
sfo01w01esx03.sfo01.rainpole.local	ad_admin_password	ad_admin_acct@sfo01.rainpole.local	sfo01w01esx03
sfo01w01esx04.sfo01.rainpole.local	ad_admin_password	ad_admin_acct@sfo01.rainpole.local	sfo01w01esx04

ESXi Host	Host virtual NIC sfo01-w01-vds01:sfo01-w01-vds01-management:management->IP address settings IPv4 address	Host virtual NIC sfo01-w01-vds01:sfo01-w01-vds01-management:management->IP address settings SubnetMask
sfo01w01esx01.sfo01.rainpole.local	172.16.31.101	255.255.255.0
sfo01w01esx02.sfo01.rainpole.local	172.16.31.102	255.255.255.0
sfo01w01esx03.sfo01.rainpole.local	172.16.31.103	255.255.255.0
sfo01w01esx04.sfo01.rainpole.local	172.16.31.104	255.255.255.0

ESXi Host	Host virtual NIC sfo01-w01-vds01:sfo01-w01-vds01-nfs:<UNRESOLVED>->IP address settings IPv4 address	Host virtual NIC sfo01-w01-vds01:sfo01-w01-vds01-nfs:<UNRESOLVED>->IP address settings SubnetMask

sfo01w01esx03.sfo01.rainpole.local	172.16.32.103	255.255.255.0
sfo01w01esx04.sfo01.rainpole.local	172.16.32.104	255.255.255.0

- g Once the file has been updated, save it and close Excel.
- h Click the **sfo01-w01hp-comp01** host profile and then click the **Configure** tab.
- i Click the **Edit Host Customizations** button.
- j In the **Edit Host Customizations** window, select all hosts and click **Next**.
- k Click the **Browse** button to use a customization file, locate the *sfo01-w01hp-comp01_host_customizations.csv* file saved earlier and select it and click **Open**, then click **Finish**.
- 5 Remediate the hosts in the shared edge and compute cluster.
- a Click the **Monitor** tab and click **Compliance**.
- b Select **sfo01-w01-comp01** and click the **Check Host Profile Compliance** button.

- c Select **sfo01w01esx02.lax01.rainpole.local** and click the **Remediate host based on its host profile** button.
- d Select **sfo01w01esx03.lax01.rainpole.local** and click the **Remediate host based on its host profile** button.
- e Select **sfo01w01esx04.lax01.rainpole.local** and click the **Remediate host based on its host profile** button.

NOTE All hosts should now show a status of **Compliant**.

- 6 Schedule nightly compliance checks.
 - a On the Policies and Profiles page, click **sfo01-w01hp-comp01**, click the **Monitor** tab, and then click the **Scheduled Tasks** subtab.
 - b Click **Schedule a New Task** then click **Check Host Profile Compliance**.
 - c In the Check Host Profile Compliance (scheduled) window click **Scheduling options**.
 - d Enter **sfo01-w01hp-comp01 Compliance Check** in the **Task Name** field.
 - e Click the **Change** button on the Configured Scheduler line.
 - f In the Configure Scheduler window select **Setup a recurring schedule for this action** and change the **Start time** to **10:00 PM** and click **OK**.
 - g Click **OK** in the Check Host Profile Compliance (scheduled) window.

Configure Lockdown Mode on All ESXi Hosts in Region A

To increase security of your ESXi hosts, you put them in Lockdown mode, so that administrative operations can be performed only from vCenter Server.

vSphere supports an Exception User list, which is for service accounts that have to log in to the host directly. Accounts with administrator privileges that are on the Exception Users list can log in to the ESXi Shell. In addition, these users can log in to a host's DCUI in normal lockdown mode and can exit lockdown mode.

You repeat this procedure to enable normal lockdown mode for all hosts in the data center. The table below lists all of the hosts.

Table 2-9. Hosts in the data center

Host	FQDN
Management host 1	sfo01m01esx01.sfo01.rainpole.local
Management host 2	sfo01m01esx02.sfo01.rainpole.local
Management host 3	sfo01m01esx03.sfo01.rainpole.local
Management host 4	sfo01m01esx04.sfo01.rainpole.local
Shared Edge and Compute host 1	sfo01w01esx01.sfo01.rainpole.local
Shared Edge and Compute host 2	sfo01w01esx02.sfo01.rainpole.local
Shared Edge and Compute host 3	sfo01w01esx03.sfo01.rainpole.local
Shared Edge and Compute host 4	sfo01w01esx04.sfo01.rainpole.local

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, click **Hosts and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- 3 Select the **sfo01m01esx01.sfo01.rainpole.local** host.
- 4 Click **Configure**.
- 5 Under System, select **Security Profile**.
- 6 In the Lockdown Mode panel, click **Edit**.
- 7 In the Lockdown Mode dialog, select the **Normal** radio button, and click **OK**.
- 8 Repeat this procedure and enable normal lockdown mode for all remaining hosts in the data center.

NOTE Lockdown Mode settings are not part of Host Profiles and must be manually enabled on all hosts.

Deploy and Configure the Shared Edge and Compute Cluster NSX Instance in Region A

Deploy and configure the NSX instance for the shared edge and compute cluster in Region A.

Procedure

- 1 [Deploy the NSX Manager for the Shared Edge and Compute Cluster NSX Instance in Region A](#) on page 109
You must first deploy the NSX Manager virtual appliance. After the NSX Manager is successfully deployed you must connect it to the Compute vCenter Server instance.
- 2 [Deploy the NSX Controllers for the Shared Edge and Compute Cluster NSX Instance in Region A](#) on page 111
After the NSX Manager is successfully connected to the Compute vCenter Server, you must promote it to the primary role and deploy the three NSX Controller nodes that form the NSX Controller cluster.
- 3 [Prepare the ESXi Hosts in the Shared Edge and Compute Cluster for NSX in Region A](#) on page 114
You must install the NSX kernel modules on the compute and edge clusters ESXi hosts so that you are able to use NSX.
- 4 [Configure the NSX Logical Network for the Shared Edge and Compute Clusters in Region A](#) on page 114
After all deployment tasks are ready, configure the NSX logical network.
- 5 [Update the Host Profile for the Compute Cluster in Region A](#) on page 116
After an authorized change is made to a host the Host Profile must be updated to reflect the changes..

- 6 [Configure NSX Dynamic Routing in the Shared Edge and Compute Cluster in Region A](#) on page 117

NSX for vSphere creates a network virtualization layer on top of which all virtual networks are created. This layer is an abstraction between the physical and virtual networks. You configure NSX dynamic routing within the compute and edge clusters, deploying two NSX Edge devices and a Universal Distributed Logical Router (UDLR).

- 7 [Test the Shared Edge and Compute Cluster NSX Configuration in Region A](#) on page 140

Test the configuration of the NSX logical network using a ping test. A ping test checks if two hosts in a network can reach each other.

Deploy the NSX Manager for the Shared Edge and Compute Cluster NSX Instance in Region A

You must first deploy the NSX Manager virtual appliance. After the NSX Manager is successfully deployed you must connect it to the Compute vCenter Server instance.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Open the Deploy OVF Template wizard.
 - a In the Navigator, expand the entire **sfo01m01vc01.sfo01.rainpole.local** tree.
 - b Right-click the **sfo01-m01-mgmt01** cluster, and click **Deploy OVF Template**.
- 3 Use the Deploy OVF Template wizard to deploy the NSX Manager virtual appliance.
 - a On the Select template page, click the **Browse** button, select the VMware NSX Manager .ova file, and click **Next**.
 - b On the Select name and location page, enter the following settings, and click **Next**.

Setting	Value
Name	sfo01w01nsx01
Folder or Datacenter	sfo01-m01fd-nsx

- c On the Select a resource page, select the following values, and click **Next**.

Setting	Value
Datacenter	sfo01-m01dc
Cluster	sfo01-m01-mgmt01

- d On the Review details page, review the **extra configuration option** message, and click **Next**.
 - e On the Accept license agreements page, click **Accept**, and click **Next**.

- f On the Select storage page, enter the following settings, and click **Next**

Setting	Value
Select virtual disk format	Thin Provision
VM Storage Policy	vSAN Default Storage Policy
Datastore	sfo01-m01-vsan01

- g On the Select networks page, Under Destination Network, select **sfo01-m01-vds01-management**, and click **Next**.
- h On the Customize template page, expand the different options, enter the following settings, and click **Next**.

Setting	Value
DNS Server List	172.16.11.5,172.16.11.4
Domain Search List	sfo01.rainpole.local
Default IPv4 Gateway	172.16.11.253
Hostname	sfo01w01nsx01.sfo01.rainpole.local
Network 1 IPv4 Address	172.16.11.66
Network 1 Netmask	255.255.255.0
Enable SSH	Selected
NTP Server List	<ul style="list-style-type: none"> ■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local
CLI "admin" User Password / enter	<i>compnsx_admin_password</i>
CLI "admin" User Password / confirm	<i>compnsx_admin_password</i>
CLI Privilege Mode Password / enter	<i>compnsx_priviledge_password</i>
CLI Privilege Mode Password / confirm	<i>compnsx_priviledge_password</i>
VMware Customer Experience Improvement Program	Selected

- i On the Ready to complete page, click **Finish**.
- j In the Navigator, expand the sfo01m01vc01.sfo01.rainpole.local tree, select the **sfo01w01nsx01** virtual machine, and click the **Power on** button.
- 4 Connect the NSX Manager to the Compute vCenter Server.

- a Open a Web browser and go to **https://sfo01w01nsx01.sfo01.rainpole.local**
- b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>compnsx_admin_password</i>

- c Click **Manage vCenter Registration**.
- d Under Lookup Service URL, click the **Edit** button.

- e In the Lookup Service URL dialog, enter the following settings, and click **OK**.

Setting	Value
Lookup Service Host	sfo01psc01.sfo01.rainpole.local
Lookup Service Port	443
SSO Administrator User Name	administrator@vsphere.local
Password	vsphere_admin_password

- f In the Trust Certificate? dialog box, click **Yes**.
- g Under vCenter Server, click the **Edit** button.
- h In the vCenter Server dialog box, enter the following settings, and click **OK**.

Setting	Value
vCenter Server	sfo01w01vc01.sfo01.rainpole.local
vCenter User Name	svc-nsxmanager@rainpole.local
Password	svc-nsxmanager_password

- i In the Trust Certificate? dialog box, click **Yes**.
- j Wait until the Status indicators for the Lookup Service URL and vCenter Server change to Connected.
- 5 Log out from the vCenter Server session in the vSphere Web Client.
- 6 Log in to the Management vCenter Server by using the vSphere Web Client.
- a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
- b Log in using the following credentials.

Setting	Value
User name	svc-nsxmanager@rainpole.local
Password	svc-nsxmanager_password

- 7 Assign the administrator@vsphere.local account access to NSX.
- a In the Navigator, click **Network & Security**.
- b Select **NSX Managers**.
- c Select **172.16.11.66** from the tree control.
- d Click the **Manage** tab, then click **Users**.
- e Click the **Add** icon.
- f On the Identify User page enter **administrator@vsphere.local** in the **User** text box and click **Next**.
- g On the Select Roles page, select the **Enterprise Administrator** radio button and click **Finish**.
- 8 Log out from the vCenter Server session in the vSphere Web Client.

Deploy the NSX Controllers for the Shared Edge and Compute Cluster NSX Instance in Region A

After the NSX Manager is successfully connected to the Compute vCenter Server, you must promote it to the primary role and deploy the three NSX Controller nodes that form the NSX Controller cluster.

It is important to deploy every node only after the previous one is successfully deployed.

To complete this procedure you must configure the datastore for the shared edge and compute cluster in Region A.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in with the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Promote the NSX Manager to the primary role.
 - a Under Inventories, click **Networking & Security**.
 - b In the Navigator, click **Installation**.
 - c On the **Management** tab, click the **172.16.11.66** instance.
 - d Click the **Actions** menu and click **Assign Primary Role**.
 - e In the Assign Primary Role confirmation dialog box, click **Yes**.
- 3 Configure an IP pool for the NSX Controller Cluster.
 - a In the Navigator, click **NSX Managers**.
 - b Under NSX Managers, click the **172.16.11.66** instance.
 - c Click the **Manage** tab, click **Grouping Objects**, click **IP Pools**, and click the **Add New IP Pool** icon.
 - d In the Add Static IP Pool dialog box, enter the following settings and click **OK**.

Setting	Value
Name	sfo01-comp01-nsxc01
Gateway	172.16.31.253
Prefix Length	24
Primary DNS	172.16.11.5
Secondary DNS	172.16.11.4
DNS Suffix	sfo01.rainpole.local
Static IP Pool	172.16.31.118-172.16.31.120

- 4 Deploy the NSX Controller cluster.
 - a In the Navigator, click **Networking & Security** to go back, and click **Installation**.
 - b Under NSX Controller nodes, click the **Add** icon to deploy three NSX Controller nodes with the same configuration.

- c In the Add Controller page, enter the following settings and click **OK**.

Note You may only configure the password during the deployment of the first controller. The other controllers will use the same password.

Setting	Value
Name	<ul style="list-style-type: none"> ■ sfo01w01nsxc01 for controller 1 ■ sfo01w01nsxc02 for controller 2 ■ sfo01w01nsxc03 for controller 3
NSX Manager	172.16.11.66
Datacenter	sfo01-w01dc
Cluster/Resource Pool	sfo01-w01rp-sddc-edge
Datastore	<i>sfo01_shared_edge_and_compute_datastore</i>
Connected To	sfo01-w01-vds01-management
IP Pool	sfo01-comp01-nsxc01
Password	<i>compnsx_controllers_password</i>
Confirm Password	<i>compnsx_controllers_password</i>

- d After the Status of the controller node changes to Connected, repeat the step and deploy the remaining two NSX Controller nodes, with the same configuration to form the controller cluster.
- 5 Configure DRS affinity rules for the NSX Controllers.
- a Go back to the Home page.
- b In the Navigator, click **Hosts and Clusters**, and expand the **sfo01w01vc01.sfo01.rainpole.local** tree.
- c Select the **sfo01-w01-comp01** cluster, and click the **Manage** tab.
- d Under Configuration, click **VM/Host Rules**.
- e Under VM/Host Rules, click **Add**.
- f In the sfo01-w01-comp01 - Create VM/Host Rule dialog box, enter the following settings and click **Add**.

Setting	Value
Name	anti-affinity-rule-nsxc
Enable rule	Selected
Type	Separate Virtual Machine

- g In the Add Rule Member dialog, select the **three NSX Controller VMs** and click **OK**.
- h In the sfo01-w01-comp01 - Create VM/Host Rule dialog click **OK** and click **OK**.

Prepare the ESXi Hosts in the Shared Edge and Compute Cluster for NSX in Region A

You must install the NSX kernel modules on the compute and edge clusters ESXi hosts so that you are able to use NSX.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Install the NSX kernel modules on the shared edge and compute cluster ESXi hosts.
 - a In the Navigator, click **Networking & Security**, click **Installation**, and click the **Host Preparation** tab.
 - b Select **172.16.11.66** from the **NSX Manager** drop-down menu.
 - c Under Installation Status, click **Install** for the **sfo01-w01-comp01** cluster and click **Yes** in the confirmation dialog.
- 3 Verify that the Installation Status column displays the NSX version for all hosts in the cluster to confirm the successful installation of the NSX kernel modules.

Configure the NSX Logical Network for the Shared Edge and Compute Clusters in Region A

After all deployment tasks are ready, configure the NSX logical network.

Complete this process in three main steps:

- Configure the Segment ID allocation.
- Configure the VXLAN networking.
- Configure the transport zone.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Configure the Segment ID allocation.
 - a In the Navigator, click **Networking & Security**.
 - b Click **Installation**, click **Logical Network Preparation**, and click **Segment ID**.

- c Select **172.16.11.66** from the **NSX Manager** drop-down menu.
- d Click **Edit**, enter the following settings, and click **OK**.

Setting	Value
Segment ID pool	5300-9000
Enable Multicast addressing	Selected
Multicast addresses	239.3.0.0-239.3.255.255
Universal Segment ID Pool	20000-29000
Enable Universal Multicast addressing	Selected
Universal Multicast addresses	239.4.0.0-239.4.255.255

3 Configure the VXLAN networking.

- a Click the **Host Preparation** tab.
- b Under **VXLAN**, click **Not Configured** on the row labeled **sfo01-w01-comp01**, enter the following settings, and click **OK**.

Setting	Value
Switch	sfo01-w01-vds01
VLAN	1634
MTU	9000
VMKNic IP Addressing	Use DHCP
VMKNic Teaming Policy	Load Balance - SRCID
VTEP	2

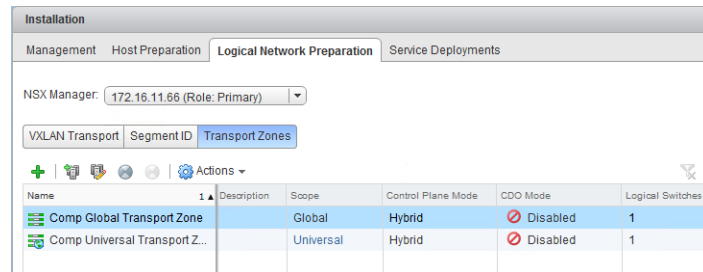

4 Configure the Universal transport zone.

- a In the Navigator, click the **Logical Network Preparation** tab and click **Transport Zones**.
- b Click the **New Transport zone** icon, enter the following settings, and click **OK**.

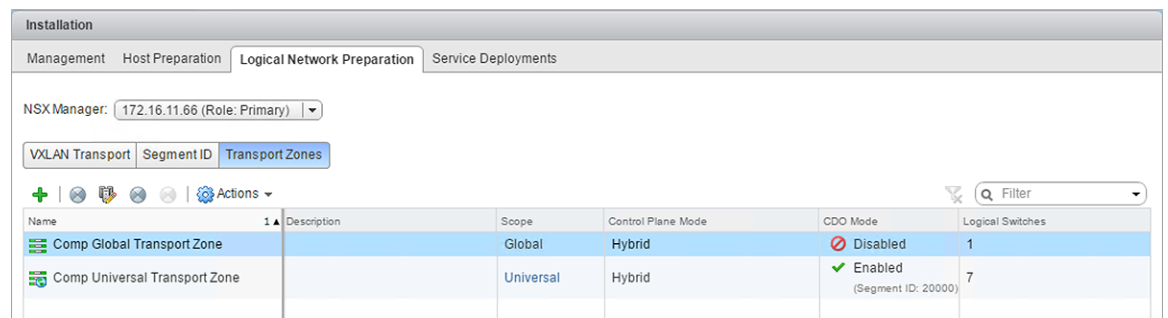

Setting	Value
Mark this object for Universal Synchronization	Selected
Name	Comp Universal Transport Zone
Replication mode	Hybrid
Select clusters part of the Transport Zone	sfo01-w01-comp01

- 5 Configure the Global transport zone.
 - a In the Navigator, click the **Logical Network Preparation** tab and click **Transport Zones**.
 - b Click the **New Transport zone** icon, enter the following settings, and click **OK**.

Setting	Value
Name	Comp Global Transport Zone
Replication mode	Hybrid
Select clusters part of the Transport Zone	sfo01-w01-comp01

- c Right click on **Comp Universal Transport Zone** and choose **Enable CDO mode** click **Yes** in the dialog to enable CDO mode.

Update the Host Profile for the Compute Cluster in Region A

After an authorized change is made to a host the Host Profile must be updated to reflect the changes..

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Update the Host Profile to the compute cluster.
 - a In the Navigator, select Policies and Profiles
 - b Click on **Host Profiles** then right click on **sfo01-w01hp-comp01** and select **Copy Settings from Host**.
 - c Select **sfo01w01esx01.sfo01.rainpole.local**, click **OK**.
- 3 Verify compliance for the hosts in the compute cluster.
 - a Click the **Monitor** tab and click **Compliance**.
 - b Select **sfo01-w01hp-comp01** and click the **Check Host Profile Compliance** button.

All hosts should show the status **Compliant**

Configure NSX Dynamic Routing in the Shared Edge and Compute Cluster in Region A

NSX for vSphere creates a network virtualization layer on top of which all virtual networks are created. This layer is an abstraction between the physical and virtual networks. You configure NSX dynamic routing within the compute and edge clusters, deploying two NSX Edge devices and a Universal Distributed Logical Router (UDLR).

Procedure

- 1 [Create a Universal Logical Switch for Use as the Transit Network in the Shared Edge and Compute Cluster in Region A](#) on page 118
Create universal and global transit logical switches for use as the transit networks in the cluster.
- 2 [Deploy NSX Edge Devices for North-South Routing in the Shared Edge and Compute Cluster in Region A](#) on page 119
Deploy NSX Edge Devices for North-South routing in the shared edge and compute cluster.
- 3 [Disable the Firewall Service in the Shared Edge and Compute Cluster in Region A](#) on page 122
Disable the firewall of the two NSX Edge services gateways.
- 4 [Enable and Configure Routing in the Shared Edge and Compute Cluster in Region A](#) on page 123
Enable the Border Gateway Protocol (BGP) to exchange routing information between the NSX Edge services gateways.
- 5 [Verify Peering of Upstream Switches and Establishment of BGP in the Shared Edge and Compute Cluster in Region A](#) on page 126
The NSX Edge devices need to establish a connection to each of its upstream BGP switches before BGP updates can be exchanged. Verify that the NSX Edges devices are successfully peering, and that BGP routing has been established.
- 6 [Deploy the Universal Distributed Logical Router in the Shared Edge and Compute Cluster in Region A](#) on page 128
Deploy the universal distributed logical routers (UDLR).
- 7 [Configure Universal Distributed Logical Router for Dynamic Routing in Shared Edge and Compute Cluster in Region A](#) on page 130
Configure the universal distributed logical router (UDLR) in the shared edge and compute cluster to use dynamic routing.

- 8 [Verify Establishment of BGP for the Universal Distributed Logical Router in the Shared Edge and Compute Cluster in Region A](#) on page 133

The universal distributed logical router (UDLR) needs to establish a connection to Edge Services Gateway before BGP updates can be exchanged. Verify that the UDLR is successfully peering, and that BGP routing has been established.

- 9 [Deploy the Distributed Logical Router in the Shared Edge and Compute Cluster in Region A](#) on page 134

Deploy the distributed logical routers (DLR).

- 10 [Configure the Distributed Logical Router for Dynamic Routing in Shared Edge and Compute Cluster in Region A](#) on page 135

Configure the distributed logical router (DLR) in the shared edge and compute cluster to use dynamic routing.

- 11 [Verify Establishment of BGP for the Distributed Logical Router in the Shared Edge and Compute Cluster in Region A](#) on page 138

The distributed logical router (DLR) needs to establish a connection to Edge Services Gateway before BGP updates can be exchanged. Verify that the DLR is successfully peering, and that BGP routing has been established.

Create a Universal Logical Switch for Use as the Transit Network in the Shared Edge and Compute Cluster in Region A

Create universal and global transit logical switches for use as the transit networks in the cluster.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **Logical Switches**.
- 4 Select **172.16.11.66** from the **NSX Manager** drop-down menu and click the **Add** icon.
- 5 In the New Logical Switch dialog box, enter the following settings and click **OK**.

Setting	Value
Name	Universal Transit Network
Transport Zone	Comp Universal Transport Zone
Replication Mode	Hybrid

- 6 In the New Logical Switch dialog box, enter the following settings, and click **OK**.

Setting	Value
Name	Global Transit Network
Transport Zone	Comp Global Transport Zone
Replication Mode	Hybrid

Deploy NSX Edge Devices for North-South Routing in the Shared Edge and Compute Cluster in Region A

Deploy NSX Edge Devices for North-South routing in the shared edge and compute cluster.

Perform this procedure two times to deploy two NSX Edge devices: sfo01w01esg01 and sfo01w01esg02.

Table 2-10. NSX Edge Devices

NSX Edge Device	Device Name
NSX Edge Device 1	sfo01w01esg01
NSX Edge Device 2	sfo01w01esg02

Table 2-11. NSX Edge Interfaces Settings

Interface	Primary IP Address - sfo01w01esg01	Primary IP Address - sfo01w01esg02
Uplink01	172.16.35.2	172.16.35.3
Uplink02	172.27.13.3	172.27.13.2
sfo01w01udlr01	192.168.100.1	192.168.100.2
sfo01w01dlr01	192.168.101.1	192.168.101.2

To complete this procedure use the datastore that you configured for the shared edge and compute cluster.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **<https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client>**.
 - b Use the following credentials to log in.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.66** from the **NSX Manager** drop-down menu.

- 5 Click the **Add** icon to deploy a new NSX Edge.

The **New NSX Edge** wizard appears.

- a On the Name and description page, enter the following settings, and click **Next**.

Setting	sfo01w01esg01	sfo01w01esg02
Install Type	Edge Service Gateway	Edge Service Gateway
Name	sfo01w01esg01	sfo01w01esg02
Hostname	sfo01w01esg01.sfo01.rainpole.local	sfo01w01esg02.sfo01.rainpole.local
Deploy NSX Edge	Selected	Selected
Enable High Availability	Deselected	Deselected

- b On the Settings page, enter the following settings, and click **Next**.

Setting	Value
User Name	admin
Password	<i>edge_admin_password</i>
Enable SSH access	Selected
Enable FIPS mode	Deselected
Enable auto rule generation	Selected
Edge Control Level logging	INFO

- c On the Configure deployment page, select the **Large** radio button to specify the Appliance Size and click the **Add** icon.
- d In the Add NSX Edge Appliance dialog box, enter the following settings, click **OK**, and click Next.

Setting	Value
Cluster/Resource Pool	sfo01-w01rp-sddc-edge
Datastore	<i>sfo01_shared_edge_and_compute_datastore</i>

- e On the Configure interfaces page, click the **Add** icon to configure the Uplink01 interface, enter the following settings, and click **OK**.

Setting	sfo01w01esg01	sfo01w01esg02
Name	Uplink01	Uplink01
Type	Uplink	Uplink
Connected To	sfo01-w01-vds01-uplink01	sfo01-w01-vds01-uplink01
Connectivity Status	Connected	Connected
Primary IP Address	172.16.35.2	172.16.35.3
Subnet Prefix Length	24	24
MTU	9000	9000
Send ICMP Redirect	Selected	Selected

- f Click the **Add** icon to configure the Uplink02 interface, enter the following settings, and click **OK**.

Setting	sfo01w01esg01	sfo01w01esg02
Name	Uplink02	Uplink02
Type	Uplink	Uplink
Connected To	sfo01-w01-vds01-uplink02	sfo01-w01-vds01-uplink02
Connectivity Status	Connected	Connected
Primary IP Address	172.27.13.3	172.27.13.2
Subnet Prefix Length	24	24
MTU	9000	9000
Send ICMP Redirect	Selected	Selected

- g Click the **Add** icon to configure the UDLR interface, enter the following settings, click **OK**, and click **Next**.

Setting	sfo01w01esg01	sfo01w01esg02
Name	sfo01w01udlr01	sfo01w01udlr01
Type	Internal	Internal
Connected To	Universal Transit Network	Universal Transit Network
Connectivity Status	Connected	Connected
Primary IP Address	192.168.100.1	192.168.100.2
Subnet Prefix Length	24	24
MTU	9000	9000
Send ICMP Redirect	Selected	Selected

- h Click the **Add** icon to configure the DLR interface, enter the following settings, click **OK**, and click **Next**.

Setting	sfo01w01esg01	sfo01w01esg012
Name	sfo01w01dlr01	sfo01w01dlr01
Type	Internal	Internal
Connected To	Global Transit Network	Global Transit Network
Connectivity Status	Connected	Connected
Primary IP Address	192.168.101.1	192.168.101.2
Subnet Prefix Length	24	24
MTU	9000	9000
Send ICMP Redirect	Selected	Selected

- i On the Default gateway settings page, deselect the **Configure Default Gateway** check box and click **Next**.
- j On the Firewall and HA page click **Next**.
- k On the Ready to complete page, review the configuration settings that you entered and click **Finish**.
- 6 Repeat this procedure to configure another NSX edge by using the settings for the second NSX Edge device.

- 7 Configure DRS affinity rules for the Edge Services Gateways.
 - a Go back to the Home page.
 - b In the Navigator, click **Hosts and Clusters**, and expand the sfo01w01vc01.sfo01.rainpole.local tree.
 - c Select the **sfo01-w01-comp01** cluster, and click the **Configure** tab.
 - d Under Configuration, click **VM/Host Rules**.
 - e Click **Add**.
 - f In the sfo01-w01-comp01 - Create VM/Host Rule dialog, enter the following settings and click **Add**.

Setting	Value
Name	anti-affinity-rule-ecmpedges
Enable rule	Selected
Type	Separate Virtual Machine

- g In the Add Rule Member dialog box, select the check box next to each of the two NSX ESG's just deployed and click **OK**.
- h In the sfo01-w01-comp01 - Create VM/Host Rule dialog box, click **OK**.

Disable the Firewall Service in the Shared Edge and Compute Cluster in Region A

Disable the firewall of the two NSX Edge services gateways.

You repeat this procedure two times for each of the NSX Edge devices: sfo01w01esg01 and sfo01w01esg01.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.66** from the **NSX Manager** drop-down menu.
- 5 Double-click the **sfo01w01esg01** NSX Edge device.
- 6 Click the **Manage** tab and click **Firewall**.
- 7 On the Firewall page, click the **Disable** button.
- 8 Click **Publish changes**.
- 9 Repeat this procedure for the NSX Edge services gateway sfo01w01esg02.

Enable and Configure Routing in the Shared Edge and Compute Cluster in Region A

Enable the Border Gateway Protocol (BGP) to exchange routing information between the NSX Edge services gateways.

Repeat this procedure two times to enable BGP for both NSX Edge devices: sfo01w01esg01 and sfo01w01esg02.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.66** from the **NSX Manager** drop-down menu.
- 5 Double-click the **sfo01w01esg01** NSX Edge device.
- 6 Click the **Manage** tab and click **Routing**.
- 7 Configure settings on the Global Configuration page.
 - a Click the **Enable** button for ECMP.
 - b To configure dynamic routing, click the **Edit** button next to Dynamic Routing Configuration.
 - c Select **Uplink01** as the Router ID and click **OK**.
 - d Click **Publish Changes**.

- 8 On the **Routing** tab, select **Static Routes** to configure it.

- a Click the **Add** icon, enter the following settings, and click **OK**.

Setting	Value
Network	<i>UDLR_Compute_Workload_Subnet</i>
Next Hop	192.168.100.3
Interface	sfo01w01udlr01
MTU	9000
Admin Distance	210

Note You must add all subnets that are behind the UDLR.

- b Click the **Add** icon, enter the following settings, and click **OK**.

Setting	Value
Network	<i>DLR_Compute_Workload_Subnet</i>
Next Hop	192.168.101.3
Interface	sfo01w01dlr01
MTU	9000
Admin Distance	210

Note You must add all subnets that are behind the DLR.

- c Click **Publish Changes**.

- 9 On the **Routing** tab, select **BGP** to configure it.

- a Click the **Edit** button, enter the following settings, and click **OK**.

Setting	Value
Enable BGP	Selected
Enable Graceful Restart	Selected
Enable Default Originate	Deselected
Local AS	65000

- b On the BGP page, click the **Add** icon to add a Neighbor.

The New Neighbor dialog box appears. You add two neighbors: the first Top of Rack Switch and the second Top of Rack Switch.

- c In the New Neighbor dialog1, enter the following values and click **OK**.

Setting	Value
IP Address	172.16.35.1
Remote AS	65001
Weight	60
Keep Alive Time	4
Hold Down Time	12
Password	<i>BGP_password</i>

- d Click the **Add** icon to add another Neighbor.

The New Neighbor dialog box appears.

- e Add the second Top of Rack switch, whose IP address is **172.27.13.1**.
- f In the New Neighbor dialog box, enter the following values and click **OK**.

Setting	Value
IP Address	172.27.13.1
Remote AS	65001
Weight	60
Keep Alive Time	4
Hold Down Time	12
Password	<i>BGP_password</i>

- g Click the **Add** icon to add another Neighbor.
- h Configure the universal distributed logical router (UDLR) as a neighbor.
- i In the **New Neighbor** dialog box, enter the following values, and click **OK**.

Setting	Value
IP Address	192.168.100.4
Remote AS	65000
Weight	60
Keep Alive Time	1
Hold Down Time	3
Password	<i>BGP_password</i>

- j Click the **Add** icon to add another Neighbor.
- k Configure the distributed logical router (DLR) as a neighbor.
- l In the New Neighbor dialog box, enter the following values, and click **OK**.

Setting	Value
IP Address	192.168.101.4
Remote AS	65000
Weight	60
Keep Alive Time	1
Hold Down Time	3
Password	<i>BGP_password</i>

- m Click **Publish Changes**.

The four neighbors you added appear in the Neighbors table.

- 10 On the **Routing** tab, select **Route Redistribution** to configure it.
- a On the Route Redistribution page, click the **Edit** button.
- b In the Change redistribution settings dialog box, select the **BGP** check box and click **OK**.
- c Click the **Add** icon for Route Redistribution Table.

- d In the New Redistribution criteria dialog box, enter the following settings, and click **OK**.

Setting	Value
Prefix	Any
Learner Protocol	BGP
OSPF	Deselected
Static Routes	Selected
Connected	Selected
Action	Permit

- e Click the **Publish Changes** button.

The route redistribution configuration appears in the **Route Redistribution** table. Confirm that the configuration values you entered are correct.

- 11 Repeat this procedure for the NSX Edge device **sfo01w01esg02**.

Verify Peering of Upstream Switches and Establishment of BGP in the Shared Edge and Compute Cluster in Region A

The NSX Edge devices need to establish a connection to each of its upstream BGP switches before BGP updates can be exchanged. Verify that the NSX Edges devices are successfully peering, and that BGP routing has been established.

You repeat this procedure two times for each of the NSX Edge devices: **sfo01w01esg01** and **sfo01w01esg01**.

Procedure

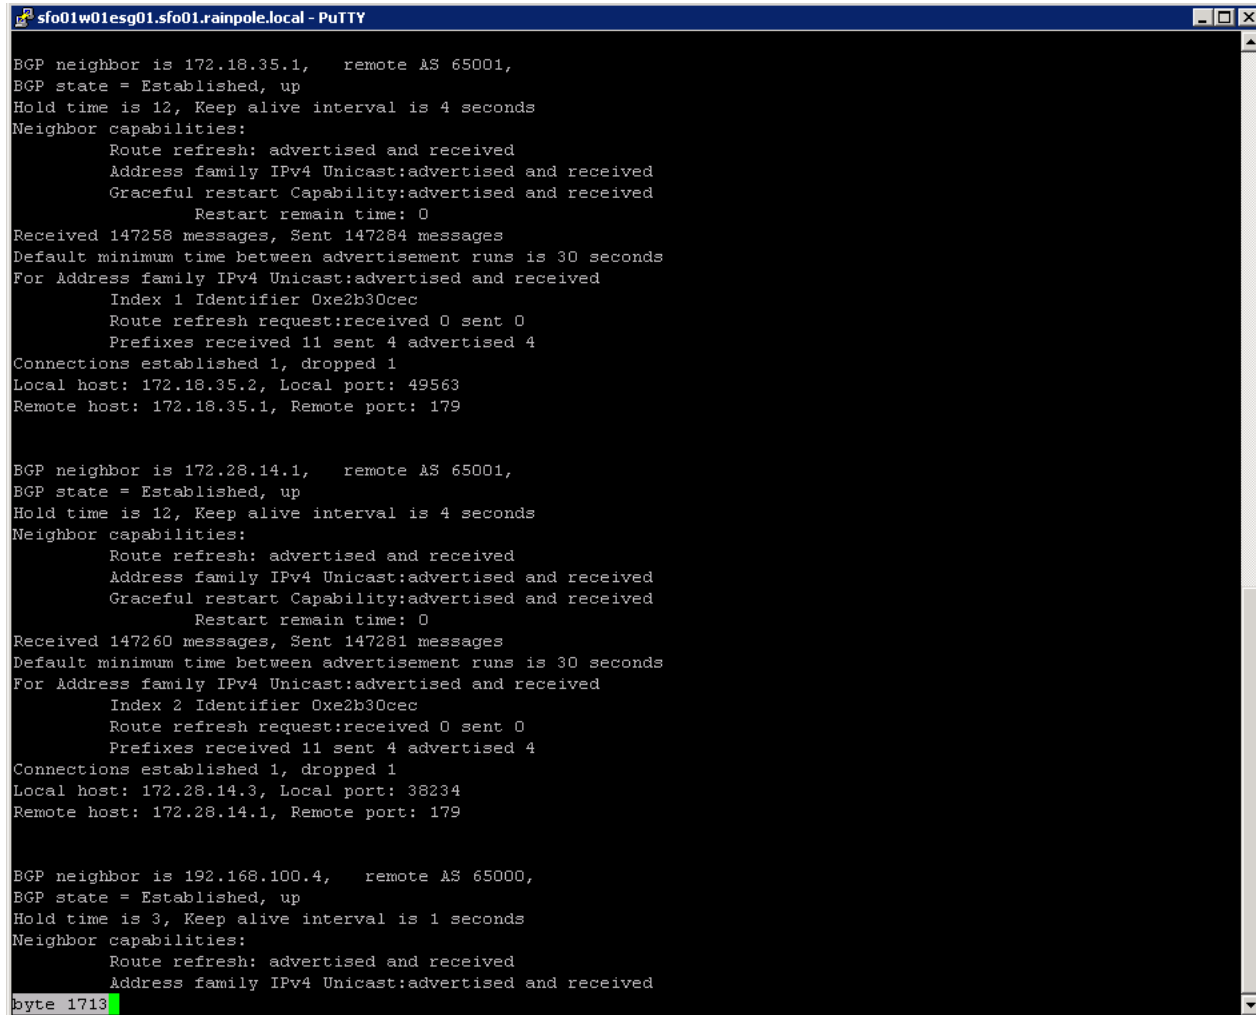

- 1 Log in to the NSX Edge device using a Secure Shell (SSH) client.
 - a Open an SSH connection to the **sfo01w01esg01** NSX Edge device.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>edge_admin_password</i>

- 2 Run the `show ip bgp neighbors` command to display information about the BGP connections to neighbors.

The BGP State will display Established, UP if you have peered with the upstream switches.

Note You have not yet created the universal distributed logical router or the distributed logical router, as such they will not display the Established, UP status message.

```
sfo01w01esg01.sfo01.rainpole.local - PuTTY

BGP neighbor is 172.18.35.1, remote AS 65001,
BGP state = Established, up
Hold time is 12, Keep alive interval is 4 seconds
Neighbor capabilities:
  Route refresh: advertised and received
  Address family IPv4 Unicast:advertised and received
  Graceful restart Capability:advertised and received
  Restart remain time: 0
Received 147258 messages, Sent 147284 messages
Default minimum time between advertisement runs is 30 seconds
For Address family IPv4 Unicast:advertised and received
  Index 1 Identifier 0xe2b30cec
  Route refresh request:received 0 sent 0
  Prefixes received 11 sent 4 advertised 4
Connections established 1, dropped 1
Local host: 172.18.35.2, Local port: 49563
Remote host: 172.18.35.1, Remote port: 179

BGP neighbor is 172.28.14.1, remote AS 65001,
BGP state = Established, up
Hold time is 12, Keep alive interval is 4 seconds
Neighbor capabilities:
  Route refresh: advertised and received
  Address family IPv4 Unicast:advertised and received
  Graceful restart Capability:advertised and received
  Restart remain time: 0

BGP neighbor is 192.168.100.4, remote AS 65000,
BGP state = Established, up
Hold time is 3, Keep alive interval is 1 seconds
Neighbor capabilities:
  Route refresh: advertised and received
  Address family IPv4 Unicast:advertised and received
byte 1713
```

- 3 Run the `show ip route` command to verify that you are receiving routes using BGP, and that there are multiple routes to BGP learned networks.

You verify multiple routes to BGP learned networks by locating the same route using a different IP address. The IP addresses are listed after the word *via* in the right-side column of the routing table output. In the image below there are two different routes to the following BGP networks: `0.0.0.0/0` and `172.27.22.0/24`. You can identify BGP networks by the letter *B* in the left-side column. Lines beginning with *C* (connected) have only a single route.

```
sfo01w01esg01.sfo01.rainpole.local - PuTTY

```

- 4 Repeat this procedure for the NSX Edge device `sfo01w01esg02`.

Deploy the Universal Distributed Logical Router in the Shared Edge and Compute Cluster in Region A

Deploy the universal distributed logical routers (UDLR).

Procedure

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to <https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client>.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.66** from the **NSX Manager** drop-down menu.

- 5 Click the **Add** icon to create a new UDLR.

The New NSX Edge wizard appears.

- 6 On the Name and description page, enter the following settings, and click **Next**.

Setting	Value
Universal Logical (Distributed) Router	Selected
Name	sfo01w01udlr01
Hostname	sfo01w01udlr01.sfo01.rainpole.local
Deploy Edge Appliance	Selected
Enable High Availability	Selected

- 7 On the Settings page, enter the following settings, and click **Next**.

Setting	Value
User Name	admin
Password	<i>udlr_admin_password</i>
Enable SSH access	Selected
Edge Control Level logging	INFO

- 8 On the Configure deployment page, and click the **Add** icon.

- 9 In the Add NSX Edge Appliance dialog box, enter the following settings and click **Next**.

Setting	Value
Cluster/Resource Pool	sfo01-w01rp-sddc-edge
Datastore	<i>sfo01_shared_edge_and_compute_datastore</i>

- 10 On the Configure deployment page, and click the **Add** icon a second time to add a second NSX Edge device.

The **Add NSX Edge Appliance** dialog box appears.

- 11 In the Add NSX Edge Appliance dialog box, enter the following settings and click **Next**.

Setting	Value
Cluster/Resource Pool	sfo01-w01rp-sddc-edge
Datastore	<i>sfo01_shared_edge_and_compute_datastore</i>

- 12 On the Configure interfaces page, under HA Interface Configuration, click **Select** and connect to **sfo01-w01-vds01-management**.

- 13 On the Configure interfaces page enter the following configuration settings and click **Next**.

- a Click the **Add** icon.

Setting	Value
Primary IP Address	1.2.1.1
Subnet Prefix Length	24

- b Enter the following settings in the Add Interface dialog box, and click **OK**.

The Add Interface dialog box appears.

Setting	Value
Name	Uplink
Type	Uplink
Connected To	Universal Transit Network
Connectivity Status	Connected
Primary IP Address	192.168.100.3
Subnet Prefix Length	24
MTU	9000

- 14 On the Default gateway settings page, deselect **Configure Default Gateway** and click **Next**.

- 15 On the Ready to complete page, click **Finish**.

Configure Universal Distributed Logical Router for Dynamic Routing in Shared Edge and Compute Cluster in Region A

Configure the universal distributed logical router (UDLR) in the shared edge and compute cluster to use dynamic routing.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **<https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client>**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.66** from the **NSX Manager** drop-down menu.
- 5 Enable HA logging.
 - a Double-click the device labeled **sfo01w01udlr01**.
 - b Click the **Manage** tab and click the **Settings** tab.
 - c Click **Change** in the HA Configuration window.
 - d Select the **Enable Logging** checkbox and click **OK**.

- 6 Configure the routing for the Universal Distributed Logical Router.
 - a Double-click **sfo01w01udlr01**.
 - b Click the **Manage** tab and click **Routing**.
 - c On the Global Configuration page, perform the following configuration steps.
 - d Click the **Edit** button under Routing Configuration, select **Enable ECMP**, and click **OK**.
 - e Click the **Edit** button under Dynamic Routing Configuration, select **Uplink** as the Router ID, and click **OK**.
 - f Click **Publish Changes**.

- 7 On the left, select **BGP** to configure it.

- a On the BGP page, click the **Edit** button.

The Edit BGP Configuration dialog box appears.

- b In the Edit BGP Configuration dialog box, enter the following settings and click **OK**.

Setting	Value
Enable BGP	Selected
Enable Graceful Restart	Selected
Local AS	65000

- c Click the **Add** icon to add a Neighbor.

The New Neighbor dialog box appears.

- d In the New Neighbor dialog box, enter the following values for both NSX Edge devices, and click **OK**.

You repeat this step two times to configure the UDLR for both NSX Edge devices: sfo01w01esg01 and sfo01w01esg02.

Setting	sfo01w01esg01 Value	sfo01w01esg02 Value
IP Address	192.168.100.1	192.168.100.2
Forwarding Address	192.168.100.3	192.168.100.3
Protocol Address	192.168.100.4	192.168.100.4
Remote AS	65000	65000
Weight	60	60
Keep Alive Time	1	1
Hold Down Time	3	3
Password	<i>bgp_password</i>	<i>bgp_password</i>

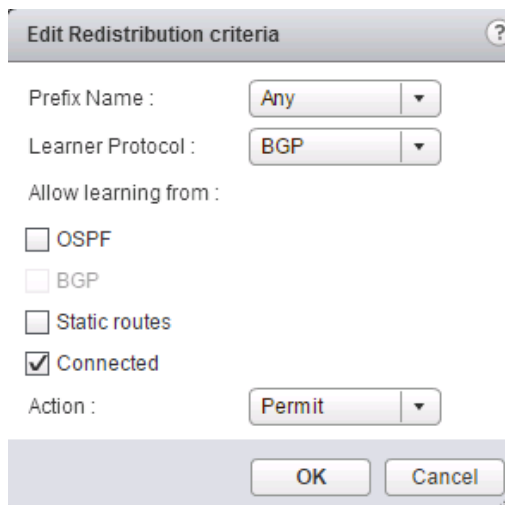

- e Click **Publish Changes**.

- 8 On the left, select **Route Redistribution** to configure it.
 - a Click the *Edit* button.
 - b In the Change redistribution settings dialog box, enter the following settings, and click **OK**.

Setting	Value
OSPF	Deselected
BGP	Selected

- c On the Route Redistribution page, select the default **OSPF** entry and click the **Edit** button.
 - d Select **BGP** from the **Learner Protocol** drop-down menu, and click **OK**.

- e Click **Publish Changes**.

Verify Establishment of BGP for the Universal Distributed Logical Router in the Shared Edge and Compute Cluster in Region A

The universal distributed logical router (UDLR) needs to establish a connection to Edge Services Gateway before BGP updates can be exchanged. Verify that the UDLR is successfully peering, and that BGP routing has been established.

Procedure

- 1 Log in to the sfo01w01udlr01 by using a Secure Shell (SSH) client.
 - a Open an SSH connection to sfo01w01udlr01, the UDLR whose peering and BGP configuration you want to verify.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	udlr_admin_password

- 2 Run the `show ip bgp neighbors` command to display information about the BGP and TCP connections to neighbors.

The BGP State will display **Established**, **UP** if you have successfully peered with the Edge Service Gateway.

```
BGP neighbor is 192.168.100.1, remote AS 65000,
BGP state = Established, up
Hold time is 3, Keep alive interval is 1 seconds
Neighbor capabilities:
  Route refresh: advertised and received
  Address family IPv4 Unicast:advertised and received
  Graceful restart Capability:advertised and received
  Restart remain time: 0
Received 40 messages, Sent 38 messages
Default minimum time between advertisement runs is 30 seconds
For Address family IPv4 Unicast:advertised and received
  Index 1 Identifier 0xa5049fbc
  Route refresh request:received 0 sent 0
  Prefixes received 5 sent 1 advertised 1
Connections established 1, dropped 22
Local host: 192.168.100.4, Local port: 179
Remote host: 192.168.100.1, Remote port: 61946

BGP neighbor is 192.168.100.2, remote AS 65000,
BGP state = Established, up
Hold time is 3, Keep alive interval is 1 seconds
```

- 3 Run the `show ip route` command to verify that you are receiving routes using BGP, and that there are multiple routes to BGP learned networks.

You verify multiple routes to BGP learned networks by locating the same route using a different IP address. The IP addresses are listed after the word *via* in the right-side column of the routing table output. In the image below there are two different routes to the following BGP networks: 0.0.0.0/0, 172.16.35.0/24, 172.27.13.0/24, and 172.27.22.0/24. You can identify BGP networks by the letter B in the left-side column. Lines beginning with C (connected) have only a single route.

```
NSX-edge-7b90db5b-b32b-43c8-9482-4965b0651f98-0> show ip route

Codes: 0 - OSPF derived, i - IS-IS derived, B - BGP derived,
C - connected, S - static, L1 - IS-IS level-1, L2 - IS-IS level-2,
IA - OSPF inter area, E1 - OSPF external type 1, E2 - OSPF external type 2,
N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2

Total number of routes: 6

B    0.0.0.0/0          [20/0]      via 192.168.100.1
B    0.0.0.0/0          [20/0]      via 192.168.100.2
C    169.254.1.0/30     [0/0]       via 169.254.1.1
B    172.16.35.0/24     [200/0]     via 192.168.100.1
B    172.16.35.0/24     [200/0]     via 192.168.100.2
B    172.27.13.0/24     [200/0]     via 192.168.100.1
B    172.27.13.0/24     [200/0]     via 192.168.100.2
B    172.27.22.0/24     [20/0]      via 192.168.100.1
B    172.27.22.0/24     [20/0]      via 192.168.100.2
C    192.168.100.0/24   [0/0]       via 192.168.100.4
```

Deploy the Distributed Logical Router in the Shared Edge and Compute Cluster in Region A

Deploy the distributed logical routers (DLR).

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.66** from the **NSX Manager** drop-down menu.
- 5 Click the **Add** icon to create a new DLR,
- 6 On the Name and description page, enter the following settings, and click **Next**.

Setting	Value
Logical (Distributed) Router	Selected
Name	sfo01w01dlr01
Hostname	sfo01w01dlr01.sfo01.rainpole.local
Deploy Edge Appliance	Selected
Enable High Availability	Selected

- 7 On the Settings page, enter the following settings, and click **Next**.

Setting	Value
User Name	admin
Password	dlr_admin_password
Enable SSH access	Selected
Enable FIPS mode	Deselected
Edge Control Level logging	INFO

- 8 On the Configure deployment page, and click the **Add** icon.
- 9 In the Add NSX Edge Appliance dialog box, enter the following settings and click **OK**.

Setting	Value
Cluster/Resource Pool	sfo01-w01rp-sddc-edge
Datastore	sfo01_shared_edge_and_compute_datastore

- 10 On the Configure deployment page, and click the **Add** icon a second time to add a second NSX Edge device.

- 11 In the Add NSX Edge Appliance dialog box, enter the following settings and click **OK** and then click **Next**.

Setting	Value
Resource Pool	sfo01-w01rp-sddc-edge
Datastore	sfo01_shared_edge_and_compute_datastore

- 12 On the Configure interfaces page, under HA Interface Configuration, click **Select** and connect to **sfo01-w01-vds01-management**.
- 13 On the Configure interfaces page enter the following configuration settings and click **Next**.

Setting	Value
Primary IP Address	1.3.1.1
Subnet Prefix Length	24

- a Under the Configure interfaces of this NSX Edge, click the **Add** icon.
- b Enter the following settings in the Add Interface dialog box, click **OK** and then click **Next**.

Setting	Value
Name	Uplink
Type	Uplink
Connected To	Global Transit Network
Connectivity Status	Connected
Primary IP Address	192.168.101.3
Subnet Prefix Length	24
MTU	9000

- 14 In the Default gateway settings page, deselect **Configure Default Gateway** and click **Next**.
- 15 In the Ready to complete page, click **Finish**.

Configure the Distributed Logical Router for Dynamic Routing in Shared Edge and Compute Cluster in Region A

Configure the distributed logical router (DLR) in the shared edge and compute cluster to use dynamic routing.

Procedure

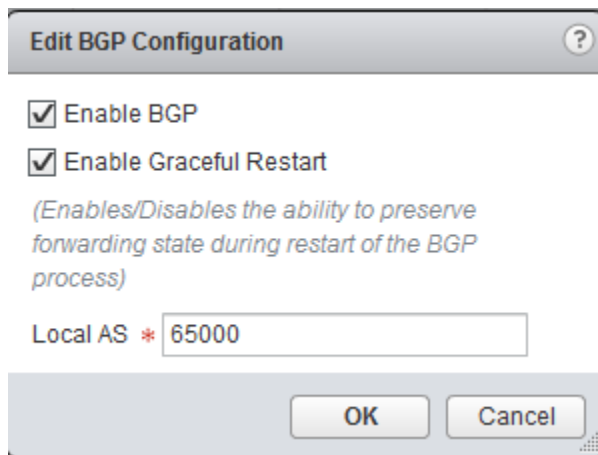

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Under Inventories, click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 Select **172.16.11.66** from the **NSX Manager** drop-down menu.

- 5 Configure the routing for the Distributed Logical Router.
 - a Double-click **sfo01w01dlr01**.
 - b Click the **Manage** tab and click **Routing**.
 - c On the Global Configuration page, perform the following configuration steps.
 - d Click the **Enable** button for ECMP.
 - e Click the **Edit** button under Dynamic Routing Configuration, select **Uplink** as the Router ID, and click **OK**.
 - f Click **Publish Changes**.
- 6 On the left, select **BGP** to configure it.
 - a On the BGP page, click the **Edit** button.
The Edit BGP Configuration dialog box appears.
 - b In the Edit BGP Configuration dialog box, enter the following settings and click **OK**.

Setting	Value
Enable BGP	Selected
Enable Graceful Restart	Selected
Local AS	65000

- c Click the **Add** icon to add a Neighbor.
The New Neighbor dialog box appears.

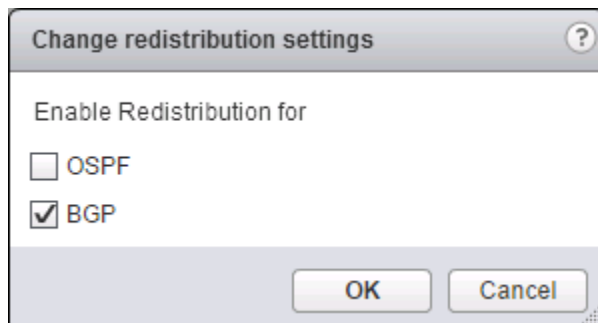

- d In the New Neighbor dialog box, enter the following values for both NSX Edge devices, and click **OK**.

Repeat this step two times to configure the DLR for both NSX Edge devices: sfo01w01esg01 and sfo01w01esg02.

Setting	sfo01w01esg01 Value	sfo01w01esg02 Value
IP Address	192.168.101.1	192.168.101.2
Forwarding Address	192.168.101.3	192.168.101.3
Protocol Address	192.168.101.4	192.168.101.4
Remote AS	65000	65000
Weight	60	60
Keep Alive Time	1	1
Hold Down Time	3	3
Password	<i>bgp_password</i>	<i>bgp_password</i>

- e Click **Publish Changes**.
- 7 On the left, select **Route Redistribution** to configure it.
- a Click the **Edit** button.
- b In the Change redistribution settings dialog box, enter the following settings, and click **OK**.

Setting	Value
OSPF	Deselected
BGP	Selected

- c On the Route Redistribution page, select the default **OSPF** entry and click the **Edit** button.

- d Select **BGP** from the **Learner Protocol** drop-down menu, and click **OK**.

Edit Redistribution criteria

Prefix Name : Any

Learner Protocol : BGP

Allow learning from :

☐ OSPF

☐ BGP

☐ Static routes

☒ Connected

Action : Permit

OK Cancel

- e Click **Publish Changes**.

Verify Establishment of BGP for the Distributed Logical Router in the Shared Edge and Compute Cluster in Region A

The distributed logical router (DLR) needs to establish a connection to Edge Services Gateway before BGP updates can be exchanged. Verify that the DLR is successfully peering, and that BGP routing has been established.

Procedure

- 1 Log in to the `sfo01w01dlr01` by using a Secure Shell (SSH) client.
 - a Open an SSH connection to **sfo01w01dlr01**, the DLR whose peering and BGP configuration you want to verify.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>dlr_admin_password</i>

- 2 Run the `show ip bgp neighbors` command to display information about the BGP and TCP connections to neighbors.

The BGP State will display `Established`, if you have successfully peered with the Edge Service Gateway.

```

Test the Shared Edge and Compute Cluster NSX Configuration in Region A

Test the configuration of the NSX logical network using a ping test. A ping test checks if two hosts in a network can reach each other.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Use the Ping Monitor to test connectivity.
 - a In the Navigator, click **Networking & Security**.
 - b Under Logical Switches, double-click **Universal Transit Network**.
 - c Click the **Monitor** tab.
 - d Under Test Parameters, select **sfo01w01esx01.sfo01.rainpole.local** as the Source host.
 - e Under the Test Parameters, select **sfo01w01esx02.sfo01.rainpole.local** as the Destination Host, and click **Start Test**.
 - f There must be no error messages listed under Results.

Deploy vSphere Data Protection in Region A

Deploy vSphere Data Protection to back up and restore SDDC management components in Region A.

vSphere Data Protection enables the backup and restore of virtual machines associated with the following components.

- vCenter Server
 - Management vCenter Server and connected external Platform Services Controller
 - Compute vCenter Server and connected external Platform Services Controller
- vRealize Automation
- vRealize Log Insight
- vRealize Operations Manager
- vRealize Business for Cloud
- vSphere Update Manager Download Service (UMDS)

Procedure

- 1 [Prerequisites for Deploying vSphere Data Protection in Region A](#) on page 141
Before you deploy vSphere Data Protection in Region A, verify that your environment satisfies the requirements for this deployment.
- 2 [Deploy the vSphere Data Protection Virtual Appliance in Region A](#) on page 142
Deploy vSphere Data Protection as a virtual appliance on the management cluster in Region A.

- 3 [Enable SSH Root User Access on the vSphere Data Protection Appliance in Region A](#) on page 143
Enable the login to the vSphere Data Protection appliance in Region A over Secure SHell (SSH) as the root user. You connect to the appliance over SSH to install custom certificates and to perform troubleshooting operations.
- 4 [Replace vSphere Data Protection Certificates in Region A](#) on page 144
After you use the VMware Validated Design Certificate Generation Utility (CertGenVVD) to generate certificates for the SDDC management components, replace the default VMware-signed certificate on vSphere Data Protection in Region A.
- 5 [Configure Service Account Access in vSphere for Integration with vSphere Data Protection in Region A](#) on page 145
Configure a service account with permissions that are required to enable vSphere Data Protection access to provide backup operations on the Management vCenter Server in Region A.
- 6 [Register vSphere Data Protection with Management vCenter Server in Region A](#) on page 148
After you deploy the virtual appliance for vSphere Data Protection on the management cluster in Region A, complete the initial configuration of vSphere Data Protection.

Prerequisites for Deploying vSphere Data Protection in Region A

Before you deploy vSphere Data Protection in Region A, verify that your environment satisfies the requirements for this deployment.

IP Addresses and Host Names

Verify that static IP address and FQDN for vSphere Data Protection are available for Region A of the SDDC deployment.

Table 2-12. IP Addresses and Host Names for vSphere Data Protection in Region A

Network Setting	Value
IP address	172.16.11.81
FQDN	sfo01m01vdp01.sfo01.rainpole.local
DNS servers	172.16.11.5,172.16.11.4
Default gateway	172.16.11.253
Subnet mask	255.255.255.0

Deployment Prerequisites

Verify that you have fulfilled the following prerequisites in addition to the networking settings:

Prerequisite	Value
Initial Storage	<ul style="list-style-type: none"> ■ Virtual disk provisioning. <ul style="list-style-type: none"> ■ Thin ■ Required storage <ul style="list-style-type: none"> ■ 6 TB NFS
Software Features	<ul style="list-style-type: none"> ■ vSphere <ul style="list-style-type: none"> ■ Management vCenter Server ■ Management cluster with enabled DRS and HA. ■ vSphere Distributed Switch configured for the vSphere management network

Prerequisite	Value
Installation Package	Download the vSphere Data Protection virtual appliance .ova file to the machine where you use the vSphere Web Client.
User Privileges and Active Directory	<ul style="list-style-type: none"> ■ Verify that the Management vCenter Server for Region A is connected to the Active Directory domain. ■ Verify that the users and groups from the rainpole.local domain are available on the Management vCenter Server in Region A.

Deploy the vSphere Data Protection Virtual Appliance in Region A

Deploy vSphere Data Protection as a virtual appliance on the management cluster in Region A.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Navigate to the **sfo01m01vc01.sfo01.rainpole.local** vCenter Server object.
- 3 Right-click the **sfo01m01vc01.sfo01.rainpole.local** object and select **Deploy OVF Template**.
- 4 On the Select template page, select **Local file**, browse to the location of the vSphere Data Protection OVA file on your file system, and click **Next**.
- 5 On the Select name and location page, enter a node name, select the inventory folder for the virtual appliance, and click **Next**.

Setting	Value
Name	sfo01m01vdp01
vCenter Server	sfo01m01vc01.sfo01.rainpole.local
Data center	sfo01-m01dc
Folder	sfo01-m01fd-bcdr

- 6 On the Select a resource page, click the **Browse** tab, select the following values, and click **Next**.

Setting	Value
Datacenter	sfo01-m01dc
Cluster	sfo01-m01-mgmt01

- 7 On the Review details page, examine the virtual appliance details, such as product name, product version, download size, and size on disk, and click **Next**.
- 8 On the Accept license agreements page, accept the end user license agreement and click **Next**.

- 9 On the Select storage page, select the NFS datastore that is provisioned for vSphere Data Protection, configure storage settings, and click **Next**.

Setting	Value
Datastore	sfo01-m01-vdp01
Select virtual disk format	Thin provision
VM storage policy	None

- 10 On the Select networks page, select the **sfo01-m01-vds01-management** distributed port group from the **Isolated Network** drop-down menu, select **IPv4** from the **IP protocol** drop-down menu, and click **Next**.
- 11 On the Customize template page, enter the networking settings for the virtual appliance, and click **Next**.

Networking Setting	Value
DNS	172.16.11.5,172.16.11.4
Default Gateway	172.16.11.253
Network 1 IP Address	172.16.11.81
Network 1 Netmask	255.255.255.0

- 12 On the Ready to complete page, verify that the settings are correct and click **Finish**.
- 13 After the virtual appliance is deployed, right-click the virtual appliance object in the vSphere Web Client and select **Power > Power On**.

Enable SSH Root User Access on the vSphere Data Protection Appliance in Region A

Enable the login to the vSphere Data Protection appliance in Region A over Secure SHell (SSH) as the root user. You connect to the appliance over SSH to install custom certificates and to perform troubleshooting operations.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Navigate to the vSphere Data Protection virtual appliance sfo01m01vdp01.
- 3 Right-click **sfo01m01vdp01** and select **Open Console** to open the remote console to the appliance.
- 4 Log in using the following credentials.

Setting	Value
User name	root
Password	<i>vdp_default_root_password</i>

- 5 Run the following console command to open the `sshd_config` file for editing.

```
vi /etc/ssh/sshd_config
```

- 6 Remove the # comment from the beginning of the line `#PermitRootLogin yes`.

```
# Authentication:

#LoginGraceTime 2m
PermitRootLogin yes
#StrictModes yes
#MaxAuthTries 6
#MaxSessions 10
```

- 7 Run the following command in the vi editor to save the file and exit the editor.
`:wq!`
- 8 In the console, restart the SSH service to update the running configuration.
`/etc/init.d/sshd restart`
- 9 Log out and close the console of the appliance.

Replace vSphere Data Protection Certificates in Region A

After you use the VMware Validated Design Certificate Generation Utility (CertGenVVD) to generate certificates for the SDDC management components, replace the default VMware-signed certificate on vSphere Data Protection in Region A.

Procedure

- 1 Log in to the vSphere Data Protection appliance.
 - a Open an SSH connection to the virtual machine `sfo01m01vdp01.sfo01.rainpole.local`.
 - b Log in using the following credentials.

Setting	Value
User name	root
Password	<i>vdp_root_password</i>

- 2 Stop the vSphere Data Protection Web services by running the following command.
`emwebapp.sh --stop`

NOTE If you see errors related to database server, ignore them.

- 3 Delete the tomcat alias from the Java keystore by running the following command.
`/usr/java/latest/bin/keytool -delete -alias tomcat -storepass changeit`
- 4 Copy the **.keystore** file generated by CertGenVVD tool to the `/tmp` folder on the vSphere Data Protection virtual appliance.

You can use FileZilla or WinSCP.

- 5 Run the following command to insert the new certification chain in to the keystore.

```
/usr/java/latest/bin/keytool -importkeystore -srckeystore /tmp/.keystore --
destkeystore /root/.keystore -srcstorepass changeit -deststorepass changeit
```

- 6 Run the following command and in the command output verify that the certificate entry with the tomcat alias exists in the keystore.

```
/usr/java/latest/bin/keytool -list -v -keystore /root/.keystore -storepass changeit -keypass
changeit
```

- 7 If the certificate entry exists in the keystore, run the `addFingerprint.sh` script to update the vSphere Data Protection server thumbprint.

```
/usr/local/avamar/bin/addFingerprint.sh
```

- 8 Start the vSphere Data Protection Web services by running the following command.

```
emwebapp.sh --start
```

- 9 Run the following command to remove the `/tmp/.keystore` file.

```
rm /tmp/.keystore
```

Configure Service Account Access in vSphere for Integration with vSphere Data Protection in Region A

Configure a service account with permissions that are required to enable vSphere Data Protection access to provide backup operations on the Management vCenter Server in Region A.

You associate the `svc-vdp` service account in the Active Directory with a user role that has certain privileges. You assign the user to the Management vCenter Server.

Define a User Role in vSphere for Integration with vSphere Data Protection in Region A

In vSphere, create a user role with privileges that are required for performing backup operations for the management virtual machines in vSphere Data Protection in Region A.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	<code>administrator@vsphere.local</code>
Password	<code>vsphere_admin_password</code>

- 2 On the Home page of the vSphere Web Client, select **Roles** under Administration.

- 3 Create a new role for managing backups.
 - a On the Roles page, click the **Create role action** icon.
 - b In the Create Role dialog box, configure the role using the following configuration settings, and click **OK**.

Setting	Value
Role name	vSphere Data Protection User
Privilege	<ul style="list-style-type: none"> ■ Alarms.Create alarm ■ Alarms.Modify alarm ■ Datastore.Allocate space ■ Datastore.Browse datastore ■ Datastore.Configure datastore ■ Datastore.Low level file operations ■ Datastore.Move datastore ■ Datastore.Remove datastore ■ Datastore.Remove file ■ Datastore.Rename datastore ■ Extension.Register extension ■ Extension.Update extension ■ Folder.Create folder ■ Global.Cancel task ■ Global.Disable methods ■ Global.Enable methods ■ Global.Licenses ■ Global.Log event ■ Global.Manage custom attributes ■ Global.Settings ■ Network.Assign network ■ Network.Configure ■ Resource.Assign virtual machine to resource pool ■ Sessions.Validate session ■ Tasks.Create task ■ Tasks.Update task ■ Virtual Machine.Configuration.Add existing disk ■ Virtual Machine.Configuration.Add new disk ■ Virtual Machine.Configuration.Add or remove device ■ Virtual Machine.Configuration.Advanced ■ Virtual Machine.Configuration.Change CPU count ■ Virtual Machine.Configuration.Change resource ■ Virtual Machine.Configuration.Disk change tracking ■ Virtual Machine.Configuration.Disk lease ■ Virtual Machine.Configuration.Extend virtual disk ■ Virtual Machine.Configuration.Host USB device ■ Virtual Machine.Configuration.Memory ■ Virtual Machine.Configuration.Modify device settings ■ Virtual Machine.Configuration.Raw device ■ Virtual Machine.Configuration.Reload from path ■ Virtual Machine.Configuration.Remove disk ■ Virtual Machine.Configuration.Rename ■ Virtual Machine.Configuration.Reset guest information ■ Virtual Machine.Configuration.Set annotation ■ Virtual Machine.Configuration.Settings ■ Virtual Machine.Configuration.Swapfile placement

Setting	Value
	<ul style="list-style-type: none"> ■ Virtual Machine.Configuration.Upgrade virtual machine compatibility ■ Virtual Machine.Guest Operations.Guest operation alias modification ■ Virtual Machine.Guest Operations.Guest operation program execution ■ Virtual Machine.Guest Operations.Guest operation queries ■ Virtual Machine.Interaction.Console interaction ■ Virtual Machine.Interaction.Device connection ■ Virtual Machine.Interaction.Guest operating system management by VIX API ■ Virtual Machine.Interaction.Power off ■ Virtual Machine.Interaction.Power on ■ Virtual Machine.Interaction.Reset ■ Virtual Machine.Interaction.VMware Tools install ■ Virtual Machine.Inventory.Create new ■ Virtual Machine.Inventory.Register ■ Virtual Machine.Inventory.Remove ■ Virtual Machine.Inventory.Unregister ■ Virtual Machine.Provisioning.Allow disk access ■ Virtual Machine.Provisioning.Allow read-only disk access ■ Virtual Machine.Provisioning.Allow virtual machine download ■ Virtual Machine.Provisioning.Mark as template ■ Virtual Machine.Snapshot management.Create snapshot ■ Virtual Machine.Snapshot management.Remove snapshot ■ Virtual Machine.Snapshot management.Revert to snapshot ■ vApp.Export ■ vApp.Import ■ vApp.vApp application configuration

This role inherits the **System.Anonymous System.View**, and **System.Read** permissions.

- 4 The Management vCenter Server for Region A propagates the role to the other linked vCenter Server instances.

Configure User Privileges in vSphere for Integration with vSphere Data Protection for Region A

Assign global permissions in Region A to the operations service account svc-vdp so that you can manage and perform backups by using vSphere Data Protection.

The svc-vdp user has access rights that are specifically required for performing backups in the vCenter Server inventory.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Assign global permissions to the svc-vdp@rainpole.local service account.
 - a In the vSphere Web Client, select **Administration** from the **Home** menu.
 - b In the navigator page, click **Global Permissions** under Access Control.
 - c On the **Manage** tab, click the **Add permission** icon.
 - d In the Global Permissions Root - Add Permission dialog box, click **Add** to associate a user or a group with a role.
 - e In the Select Users/Groups dialog, from the **Domain** drop-down menu, select **rainpole.local**, in the filter box type **svc-vdp**, and press Enter.
 - f From the list of users and groups, select the **svc-vdp** user, click **Add**, and click **OK**.
 - g In the Global Permissions Root - Add Permission dialog, from the **Assigned Role** drop-down menu, select **vSphere Data Protection User**, select **Propagate to children** checkbox, and click **OK**.

The global permissions of the svc-vdp service account propagate to all linked vCenter Server instances.

Register vSphere Data Protection with Management vCenter Server in Region A

After you deploy the virtual appliance for vSphere Data Protection on the management cluster in Region A, complete the initial configuration of vSphere Data Protection.

Procedure

- 1 Log in to the vSphere Data Protection Configuration Utility.
 - a Open a Web browser and go to **https://sfo01m01vdp01.sfo01.rainpole.local:8543/vdp-configure**.
 - b Log in using the following credentials.

Setting	Value
User name	root
Password	<i>vdp_default_root_password</i>

The vSphere Data Protection configuration wizard appears.

- 2 On the Welcome page, click **Next**.
- 3 On the Network Settings page, verify that the network settings are populated correctly and click **Next**.
- 4 On the Time Zone page, select the **UTC** time zone and click **Next**.
- 5 On the VDP Credentials page, enter and confirm a new password for the root Linux appliance user, and click **Next**.

The password must satisfy the following requirements:

- If all four character classes are used, the password must be at least 6 characters.
- If three character classes are used, the password must be at least 7 characters.
- If one or two character classes are used, the password must be at least 8 characters.
- The four-character classes are as follows:
 - Upper case letters A-Z
 - Lower case letters a-z
 - Numbers 0-9

- Special characters (for example: ~!@#,.)

- 6 On the vCenter Registration page, configure the settings for registration with the Management vCenter Server.

- a Enter the settings for connection to the Management vCenter Server.

vCenter Server Setting	Value
vCenter username	rainpole.local\svc-vdp
vCenter password	<i>svc-vdp_password</i>
vCenter FQDN or IP	sfo01m01vc01.sfo01.rainpole.local
vCenter HTTP port	80
vCenter HTTPS port	443
Verify vCenter certificate	Deselected
Use vCenter for SSO authentication	Deselected
SSO FQDN or IP	sfo01psc01.sfo01.rainpole.local
SSO port	443

- b Click **Test Connection**, and in the success message box, click **OK**.
 - c On the vCenter Registration page, click **Next**.
- 7 On the Create Storage page, select **Create new storage**, in the **Capacity** text box, enter **4 TiB** and click **Next**.
- 8 On the Device Allocation page, from the **Provision** drop-down menu, select **Thin** and click **Next**.
- 9 On the CPU and Memory page, leave the default settings and click **Next**.
- 10 On the Product Improvement page, select **Enable Customer Experience Improvement Program** and click **Next**.
- 11 On the Ready to Complete page, select the **Run performance analysis on storage configuration** and **Restart the appliance if successful** check boxes, and click **Next**.
- 12 In the Warning message box about storage configuration, click **Yes**.
vSphere Data Protection setup starts configuring data disks.
- 13 After disk configuration is complete, click **OK** in the **Note** dialog box. The appliance will automatically restart.
- 14 Verify that the vSphere Data Protection is accessible in the vSphere Web Client after you complete the initial configuration of vSphere Data Protection.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>
 - c On the vSphere Web Client Home page, verify that the **VDP** icon is available and that you can connect to the appliance.

Replace Certificates in Region A

By default, virtual infrastructure management components use TLS/SSL certificates that are signed by the VMware Certificate Authority (VMCA). In this design, you replace user-facing certificates with certificates that are signed by a Microsoft Certificate Authority (CA).

Infrastructure administrators connect to different SDDC components, such as vCenter Server systems or a Platform Services Controller from a Web browser to perform configuration, management and troubleshooting. The authenticity of the network node to which the administrator connects must be confirmed with a valid TLS/SSL certificate.

You can use other Certificate Authorities according to the requirements of your organization. You do not replace certificates for machine-to-machine communication. If necessary, you can manually mark these certificates as trusted. You will be replacing the certificates in the following order

- 1 Management vCenter Server
- 2 Compute vCenter Server
- 3 Management NSX Manager
- 4 Compute NSX Manager

Procedure

- 1 [Replace the vCenter Server Certificates in Region A](#) on page 150
After you replace the Platform Services Controller certificate, you replace the vCenter Server machine SSL certificate.
- 2 [Replace the NSX Manager Certificates in Region A](#) on page 152
After you replace the certificates of all Platform Services Controller and vCenter Server instances, replace the certificates for the NSX Manager instances.

Replace the vCenter Server Certificates in Region A

After you replace the Platform Services Controller certificate, you replace the vCenter Server machine SSL certificate.

You replace the certificates of the Platform Services Controller nodes during their deployment. You replace vCenter Server certificates after you deploy all virtual infrastructure components.

You replace certificates twice, once for each vCenter Server instance. You can start replacing certificates on Management vCenter Server sfo01m01vc01.sfo01.rainpole.local first.

Table 2-13. Certificate-Related Files on the vCenter Server Instances

vCenter Server FQDN	Files for Certificate Replacement	Replacement Order
sfo01m01vc01.sfo01.rainpole.local	<ul style="list-style-type: none"> ■ sfo01m01vc01.key ■ sfo01m01vc01.1.cer ■ Root64.cer 	First
sfo01w01vc01.sfo01.rainpole.local	<ul style="list-style-type: none"> ■ sfo01w01vc01.key ■ sfo01w01vc01.1.cer ■ Root64.cer 	Second

Prerequisites

- CA-signed certificate files generated by using VMware Validated Design Certificate Generation Utility (CertGenVVD). See the *VMware Validated Design Planning and Preparation* documentation.

- A Windows host with an SSH terminal access software such as PuTTY and an scp software such as WinSCP installed.

Procedure

- 1 Change the vCenter Server appliance command shell to the Bash shell to allow secure copy (scp) connections.

- a Open an SSH connection to sfo01m01vc01.sfo01.rainpole.local.
- b Log in using the following credentials.

Setting	Value
User name	root
Password	vcenter_server_root_password

- c Run the following commands to enable Bash shell access for the root user.

```
shell
chsh -s "/bin/bash" root
```

- 2 Copy the generated certificates to the vCenter Server Appliance.

- a Run the following command to create a new temporary folder.

```
mkdir -p /root/certs
```

- b Copy the certificate files sfo01m01vc01.1.cer, sfo01m01vc01.key and Root64.cer to the /root/certs folder.

You can use an scp software such as WinSCP.

- 3 Replace the CA-signed certificate on the vCenter Server instance.

- a Start the vSphere Certificate Manager utility on the vCenter Server instance.

```
/usr/lib/vmware-vmca/bin/certificate-manager
```

- b Select **Option 1 (Replace Machine SSL certificate with Custom Certificate)**, enter the default vCenter Single Sign-On user name **administrator@vsphere.local** and the **vsphere_admin_password** password.

- c When prompted for the Infrastructure Server IP, enter the IP address of the Platform Services Controller that manages this vCenter Server instance.

Option	IP Address of Connected Platform Services Controller
sfo01m01vc01.sfo01.rainpole.local	172.16.11.61
sfo01w01vc01.sfo01.rainpole.local	172.16.11.63

- d Select **Option 2 (Import custom certificate(s) and key(s) to replace existing Machine SSL certificate)**.
- e When prompted, provide the full path to the custom certificate, the root certificate file, and the key file that you copied over earlier, and confirm the import with **Yes (Y)**.

vCenter Server	Input to the vSphere Certificate Manager Utility
sfo01m01vc01.sfo01.rainpole.local	Please provide valid custom certificate for Machine SSL. File : /root/certs/sfo01m01vc01.1.cer Please provide valid custom key for Machine SSL. File : /root/certs/sfo01m01vc01.key Please provide the signing certificate of the Machine SSL certificate. File : /root/certs/chainRoot64.cer
sfo01w01vc01.sfo01.rainpole.local	Please provide valid custom certificate for Machine SSL. File : /root/certs/sfo01w01vc01.1.cer Please provide valid custom key for Machine SSL. File : /root/certs/sfo01w01vc01.key Please provide the signing certificate of the Machine SSL certificate. File : /root/certs/chainRoot64.cer

- 4 After Status shows 100% Completed, wait several minutes until all vCenter Server services are restarted.
- 5 Run the following commands to restart the vami-lighttpd service and to remove certificate files.

```
service vami-lighttpd restart
cd /root/certs/
rm sfo01m01vc01.1.cer sfo01m01vc01.key Root64.cer
```
- 6 After you replace the certificate on the Management vCenter Server sfo01m01vc01.sfo01.rainpole.local, repeat the procedure to replace the certificate on the Compute vCenter Server sfo01w01vc01.sfo01.rainpole.local.

Replace the NSX Manager Certificates in Region A

After you replace the certificates of all Platform Services Controller and vCenter Server instances, replace the certificates for the NSX Manager instances.

You replace certificates twice, once for each NSX Manager. You first start replacing certificates on the NSX Manager sfo01m01nsx01.sfo01.rainpole.local for the management cluster.

Table 2-14. Certificate-Related Files on the NSX Manager Instances in Region A

NSX Manager FQDN	Certificate File Name
sfo01m01nsx01.sfo01.rainpole.local	■ sfo01m01nsx01.4.p12
sfo01w01nsx01.sfo01.rainpole.local	■ sfo01w01nsx01.4.p12

Prerequisites

- CA-signed certificate files generated by using VMware Validated Design Certificate Generation Utility (CertGenVVD). See the *VMware Validated Design Planning and Preparation* documentation.

Procedure

- 1 On the Windows host that has access to the data center, log in to the NSX Manager Web interface.
 - a Open a Web browser and go to following URL.

NSX Manager	URL
NSX Manager for the management cluster	https://sfo01m01nsx01.sfo01.rainpole.local
NSX Manager for the shared compute and edge cluster	https://sfo01w01nsx01.sfo01.rainpole.local

- b Log in using the following credentials.

Setting	Value
User name	admin
Password	nsx_manager_admin_password

- 2 On the **Home** page, select **Manage Appliance Settings**.
- 3 On the **Manage** tab, click **SSL Certificates**, click **Upload PKCS#12 Keystore**.
- 4 Browse to the certificate chain file sfo01m01nsx01.4.p12, provide the keystore password or passphrase, and click **Import**.
- 5 Restart the NSX Manager to propagate the CA-signed certificate.
 - a In the right corner of the NSX Manager page, click the **Settings** icon.
 - b From the drop-down menu, select **Reboot Appliance**.
- 6 Re-register the NSX Manager to the Management vCenter Server.
 - a Open a Web browser and go to the NSX Manager Web interface.

Setting	Value
NSX Manager for the management cluster	https://sfo01m01nsx01.sfo01.rainpole.local
NSX Manager for the shared compute and edge cluster	https://sfo01w01nsx01.sfo01.rainpole.local

- b Log in using the following credentials.

Setting	Value
User name	admin
Password	nsx_mgr_admin_password

- c Click **Manage vCenter Registration**.
 - d Under Lookup Service URL, click the **Edit** button.
 - e In the Lookup Service URL dialog box, enter the following settings, and click **OK**.

Setting	Value
Lookup Service IP	sfo01psc01.sfo01.rainpole.local
Lookup Service Port	443
SSO Administrator User Name	administrator@vsphere.local
Password	vsphere_admin_password

- f In the Trust Certificate? dialog box, click **Yes**.

- g Under vCenter Server, click the **Edit** button.
- h In the vCenter Server dialog box, enter the following settings, and click **OK**.

Setting	Value for the NSX Manager for the Management Cluster	Value for the NSX Manager for the Shared Edge and Compute Cluster
vCenter Server	sfo01m01vc01.sfo01.rainpole.local	sfo01w01vc01.sfo01.rainpole.local
vCenter User Name	svc-nsxmanager@rainpole.local	
Password	<i>svc-nsxmanager_password</i>	

- i In the Trust Certificate? dialog box, click **Yes**.
 - j Wait until the Status indicators for the Lookup Service URL and vCenter Server change to **Connected**.
- 7 Repeat the steps for the NSX Manager for the shared compute and edge cluster.

Region A Cloud Management Platform Implementation

3

The Cloud Management Platform (CMP) consists of integrated products that support the management of public, private and hybrid cloud environments. The VMware CMP consists of vRealize Automation, an embedded vRealize Orchestrator, and vRealize Business for Cloud.

vRealize Automation incorporates virtual machine provisioning and a self-service portal. vRealize Business enables billing and chargeback functions. vRealize Orchestrator provides workflow optimization. The following procedures describe the validated flow of installation and configuration for the first site in the enterprise.

Procedure

- 1 [Prerequisites for Cloud Management Platform Implementation in Region A](#) on page 156
Verify that the following configurations are established prior to beginning the Cloud Management Platform procedures.
- 2 [Configure Service Account Privileges in Region A](#) on page 164
For you to provision virtual machines and logical networks, configure privileges for vRealize Automation for the service account svc-vra@rainpole.local on both the Compute vCenter Server and the Compute Cluster NSX instance.
- 3 [vRealize Automation Installation in Region A](#) on page 166
A vRealize Automation installation includes installing and configuring single sign-on (SSO) capabilities, the user interface portal, and Infrastructure as a Service (IaaS) components.
- 4 [vRealize Automation Default Tenant Configuration in Region A](#) on page 196
In shared cloud environments, where multiple companies, divisions or independent groups are using a common infrastructure fabric, it is necessary to set up virtual private clouds where authentication, resources, policy are customized to the needs of each group. Tenants are useful for isolating the users, resources and services of one tenant from those of other tenants.
- 5 [vRealize Automation Tenant Creation in Region A](#) on page 199
You create additional vRealize Automation tenants so that users can access the applications and resources that they need to complete their work assignments.
- 6 [Embedded vRealize Orchestrator Configuration in Region A](#) on page 210
VMware Embedded vRealize Orchestrator is a platform that provides a library of extensible workflows to allow you to create and run automated, configurable processes to manage the VMware vSphere infrastructure as well as other VMware and third-party technologies.
- 7 [vRealize Business Installation in Region A](#) on page 218
vRealize Business is an IT financial management tool that provides transparency and control over the costs and quality of IT services, enabling alignment with the business and acceleration of IT transformation.

8 [Cloud Management Platform Post-Installation Tasks in Region A](#) on page 225

After you deploy vRealize Automation and vRealize Orchestrator, you create anti-affinity rules to enable HA protection for both services, enable health monitors to check the health status of individual servers, and remove the snapshots created during the vRealize Automation installation.

9 [Content Library Configuration in Region A](#) on page 230

Content libraries are container objects for VM templates, vApp templates, and other types of files. vSphere administrators can use the templates in the library to deploy virtual machines and vApps in the vSphere inventory. Sharing templates and files across multiple vCenter Server instances in same or different locations brings out consistency, compliance, efficiency, and automation in deploying workloads at scale.

10 [Tenant Content Creation in Region A](#) on page 232

In order to provision virtual machines in the Compute vCenter, the tenant must be configured to utilize compute resources within vCenter Server.

Prerequisites for Cloud Management Platform Implementation in Region A

Verify that the following configurations are established prior to beginning the Cloud Management Platform procedures.

DNS Entries and IP Address Mappings in Region A

Before you deploy vRealize Automation, verify that your environment satisfies the requirements for this deployment.

IP Addresses and Host Names

Verify that the static IP address and FQDNs that are listed in the table below are available for the vRealize Automation application virtual network for the first region of the SDDC deployment.

Table 3-1. IP Addresses and FQDNs for the vRealize Automation Instance in Region A

Role	IP Address	FQDN
vRealize Automation Server Appliances	192.168.11.51	vra01svr01a.rainpole.local
	192.168.11.52	vra01svr01b.rainpole.local
vRealize Automation Server VIP	192.168.11.53	vra01svr01.rainpole.local
vRealize Automation IWS	192.168.11.54	vra01iws01a.rainpole.local
	192.168.11.55	vra01iws01b.rainpole.local
vRealize Automation IWS VIP	192.168.11.56	vra01iws01.rainpole.local
vRealize Automation IMS	192.168.11.57	vra01ims01a.rainpole.local
	192.168.11.58	vra01ims01b.rainpole.local
vRealize Automation IMS VIP	192.168.11.59	vra01ims01.rainpole.local
vRealize DEM Workers	192.168.11.60	vra01dem01a.rainpole.local
	192.168.11.61	vra01dem01b.rainpole.local
MS SQL Server for vRealize Automation	192.168.11.62	vra01mssql01.rainpole.local
vRealize Business for Cloud Server Appliance	192.168.11.66	vrb01svr01.rainpole.local

Table 3-2. IP Addresses and Host Name for the Supporting Infrastructure in Region A

Role	IP Address	FQDN
vRealize Automation Proxy Agent	192.168.31.52	sfo01ias01a.sfo01.rainpole.local
	192.168.31.53	sfo01ias01b.sfo01.rainpole.local
vRealize Business for Cloud Data Collector	192.168.31.54	sfo01vrbc01.sfo01.rainpole.local
Default gateway	192.168.31.1	
DNS server	172.16.11.5	
Subnet mask	255.255.255.0	
ntp	172.16.11.251	ntp.sfo01.rainpole.local
	172.16.11.252	
	172.17.11.251	ntp.lax01.rainpole.local
	172.17.11.252	

vRealize Automation Deployment Prerequisites

Before you install and use vRealize Automation, your environment must meet the following prerequisites.

Prerequisite	Value
Storage	<ul style="list-style-type: none"> ■ Virtual disk provisioning. ■ Required storage per node.
Operating system	Windows 2012 R2 Standard
Database	Microsoft SQL Server 2012 Standard Edition
Installation package	Download the vRealize Automation virtual appliance .ova file. Download the vRealize Business for Cloud virtual appliance .ova file.
License	Verify that you have obtained a license that covers the use of vRealize Automation. Verify that you have obtained a license that covers the use of vRealize Business for vRealize Automation.
Active directory	Verify that you have a parent Active Directory instance with the SDDC user roles configured for the rainpole.local domain. Verify the existence of the svc-vra user in the rainpole.local domain. Verify the existence of the svc-vro user in the rainpole.local domain. The Microsoft SQL Server virtual machine should join the rainpole.local domain.
Certification authority	Configure the root Active Directory domain controller as a certificate authority for the environment.
Java	Install Java SE Development Kit (JDK), which is required to run the vRealize Orchestrator Client.

SQL Server Configuration for the Cloud Management Platform in Region A

The Cloud Management Platform uses a Microsoft SQL Server database to store data for use by vRealize Automation.

Microsoft SQL Server Recommendations in Region A

vRealize Automation and other VMware components use Microsoft SQL Server as a database to store information. While the specific configuration of SQL Server for use in your environment is not addressed in this implementation guide, high-level guidance is provided to ensure more reliable operation of your VMware components.

- Microsoft SQL Server should be configured with separate Operating System Level volumes (drive letters) for each of the following items. The separation of these items into separate logical volumes (drive letters) will help prevent database corruption should a single volume reach capacity.
 - Operating System
 - Database Application
 - SQL User Database Data Files
 - SQL User Database Log Files
 - SQL TempDB
 - SQL Backup Files
- To provide optimal performance for VMware vRealize databases, configure the SQL Server virtual machine (`vra01mssql01.rainpole.local`) with 8 vCPU and 16GB vRAM.
- Configure the SQL Server virtual machine's (`vra01mssql01.rainpole.local`) primary DNS to point to 172.16.11.4 (region A's primary DNS) and its secondary DNS to point to 172.17.11.4 (region B's primary DNS).

For further guidance on the deployment and operation of a production installation of Microsoft SQL Server, see the Microsoft SQL Server documentation, or consult with a qualified Microsoft SQL Server database administrator.

Assign the SQL Server System Role to vRealize Automation in Region A

Assign the SQL Server system role **sysadmin** to the vRealize Automation service account.

vRealize Automation uses the SQL Server system role privilege to create and execute scripts on the SQL Server database. By default, only users who are members of the **sysadmin** system role, or the **db_owner** and **db_ddladmin** database roles, can create objects in the database.

Procedure

- 1 Log in to the `VRA01MSSQL01.rainpole.local` by using a Remote Desktop Protocol (RDP) client.
 - a Open an RDP connection to the virtual machine `VRA01MSSQL01.rainpole.local`.
 - b Log in using the following credentials.

Setting	Value
User name	Windows administrator user
Password	<i>windows_administrator_password</i>

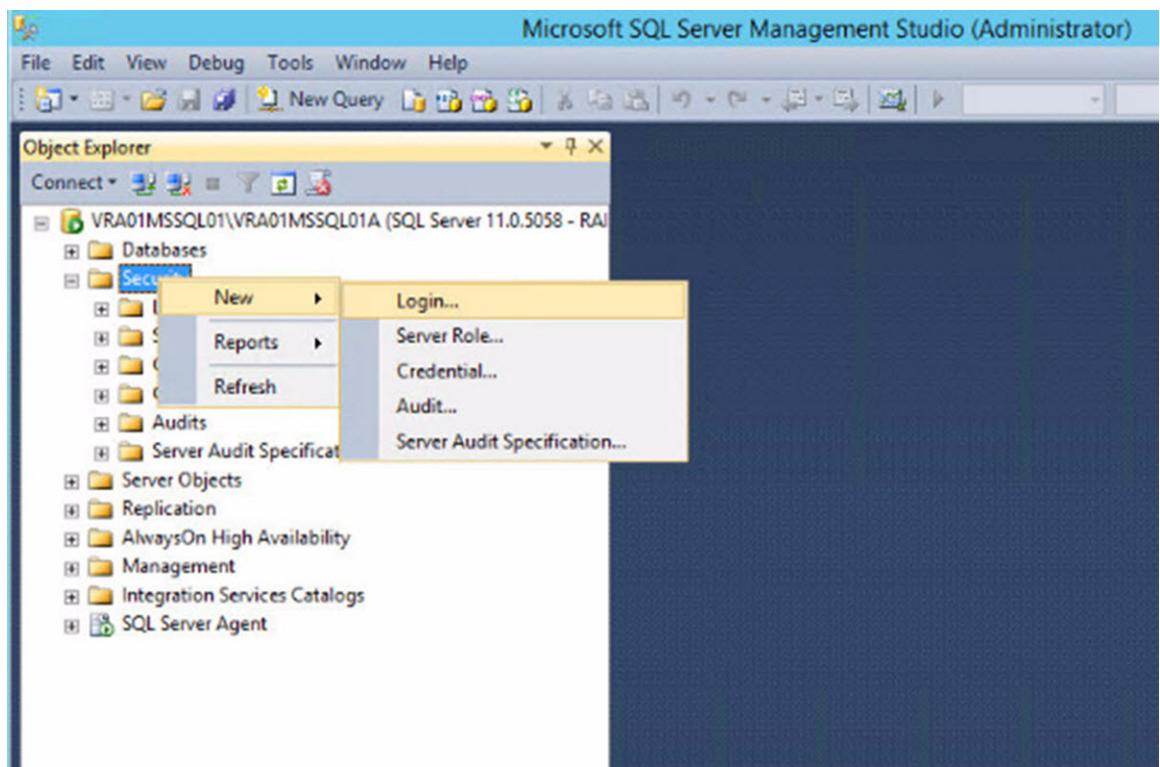

- 2 From the **Start** menu, click **All Programs**, click **Microsoft SQL Server**, and click **SQL Server Management Studio**.

NOTE If SQL Server Management Studio doesn't appear in your **All Programs** menu, you may not have successfully installed SQL Server Management Studio. Verify that you have successfully installed SQL Server Management Studio, and then continue with this procedure.

- 3 In the Connect to Server dialog box, leave the default value of the **Server Name** text box, select **Windows Authentication** from the **Authentication** drop-down menu, and click **Connect**.

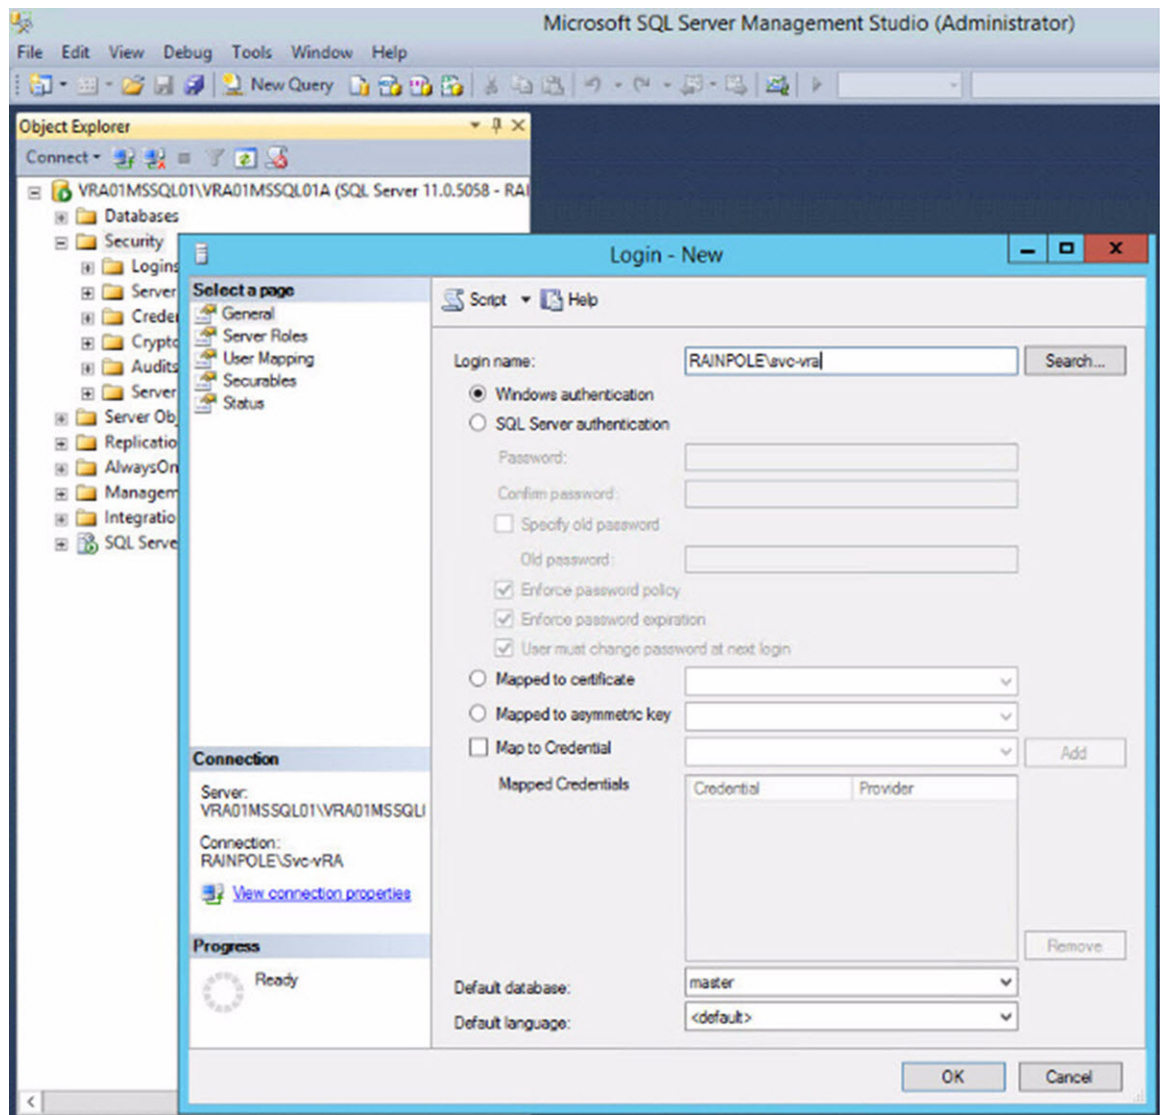

NOTE During the SQL Server installation, the Database Engine configuration wizard prompts you to provide the user name and password for the SQL Server administrator. If this user was not added during the SQL Server installation, select **SQL Authentication** from the **Authentication** drop-down menu, and enter the user name **sa** in the **User name** text box, and the password **sa_password** in the **Password** text box.

- 4 In Object Explorer, expand the server instance **VRA01MSSQL01**.
- 5 Right-click the **Security** folder, click **New**, and click **Login**.

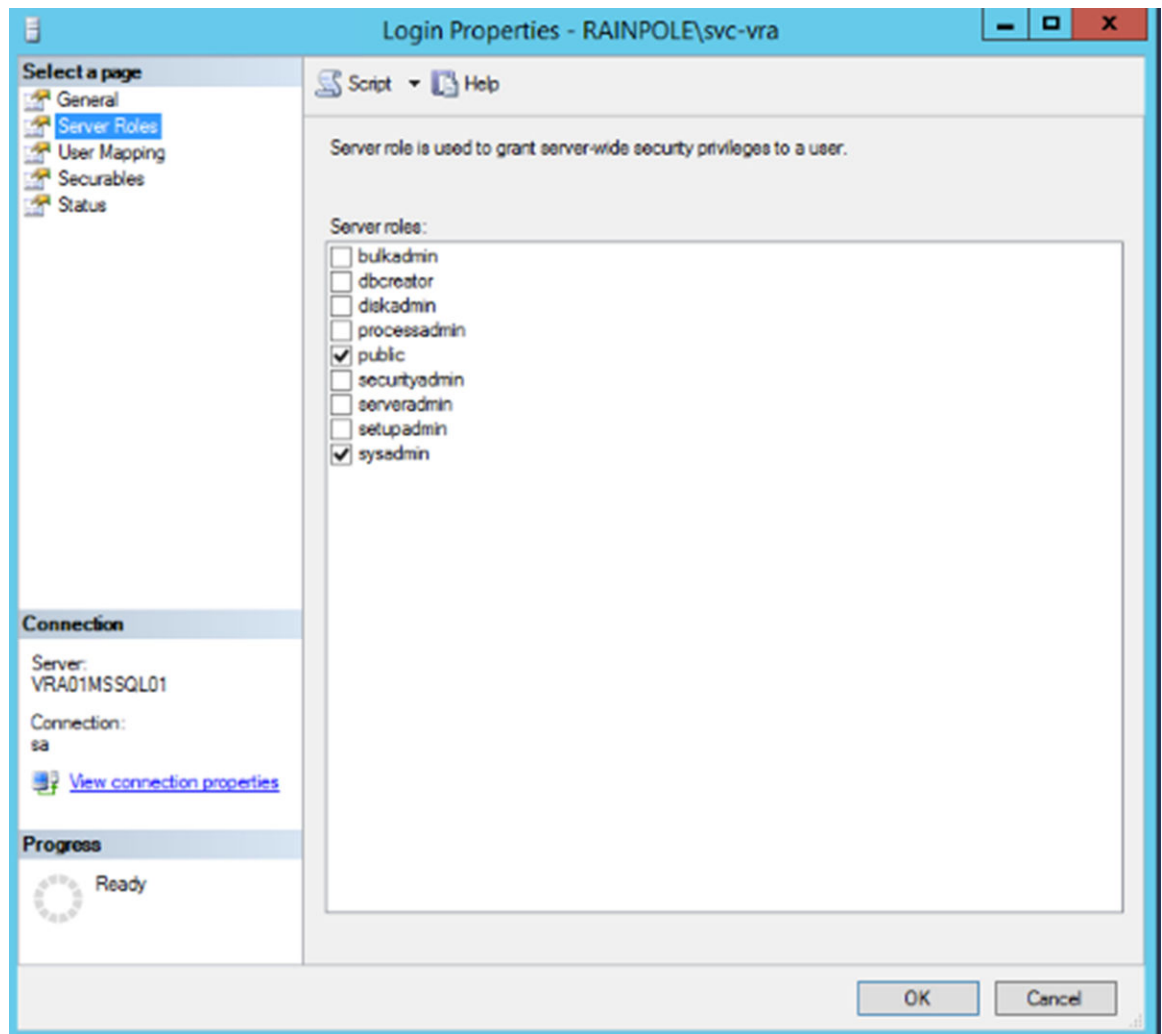

The Login Properties dialog box opens.

- 6 Select the General page of the Login Properties dialog box.
- 7 From the Object Explorer Details pane select the General page, and enter **Rainpole\Svc-vRA** in the **Login name** text box.

- 8 In the Object Explorer Details pane, select the Server Role page.
- 9 In the Server roles list item field select the **sysadmin** check box, and click **OK**.

Configure Network Access for Distributed Transaction Coordinator in Region A

You configure network access and security between vRealize Automation and your Microsoft SQL Server database using Microsoft Distributed Transaction Coordinator (MSDTC). MSDTC coordinates transactions that update two or more transaction-protected resources, such as databases, message queues, files systems, and so on. These transaction-protected resources may be on a single computer, or distributed across many networked computers.

Procedure

- 1 Log in to the VRA01MSSQL01.rainpole.local by using a Remote Desktop Protocol (RDP) client.
 - a Open an RDP connection to the virtual machine VRA01MSSQL01.rainpole.local.
 - b Log in using the following credentials.

Setting	Value
User name	Windows administrator user
Password	<i>windows_administrator_password</i>

- 2 From the **Start** menu, click **Run**, type **comexp.msc** in the **Open** text box, and click **OK**.

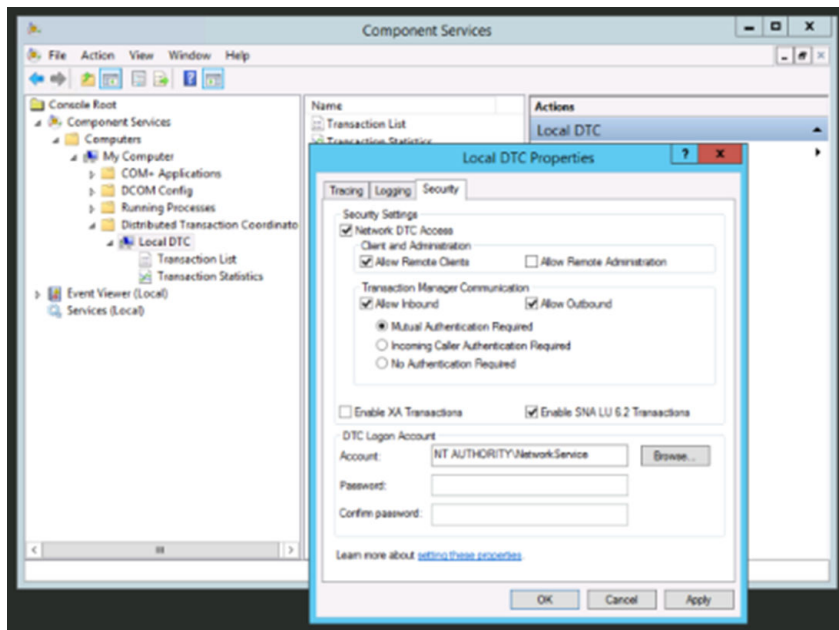

The Component Services manager displays. Component Services lets you manage Component Object Model (COM+) applications.

- 3 Using the navigation tree in the left-side pane, expand **Component Services > Computers > My Computer > Distributed Transaction List > Local DTC**.
- 4 Right-click **Local DTC** and click **Properties**.

The **Local DTC Properties** dialog box displays.

- 5 Click the **Security** tab in the Local DTC Properties dialog box.
- 6 On the **Security** tab, configure the following values, and click **OK**.

Setting	Value
Network DTC Access	Selected
Allow Remote Clients	Selected
Allow Remote Administration	Deselected
Allow Inbound	Selected
Allow Outbound	Selected
Mutual Authentication Required	Selected
Enable XA Transactions	Deselected
Enable SNA LU 6.2 Transactions	Selected
Account	Leave the default setting (NT AUTHORITY\NetworkService)
Password	Leave blank

- 7 Click **Yes** to restart the MSDTC Service.
- 8 Click **OK** to confirm that the MSDTC Service has successfully restarted.
- 9 Close the Component Services manager.

Allow MS SQL Server and MSDTC access through Windows Firewall for vRealize Automation in Region A

You can configure Windows Firewall to allow or block specific traffic. For vRealize Automation to function correctly, ensure that network access to Microsoft Distributed Transaction Coordinator (MSDTC) and SQL Server is configured to allow access.

Procedure

- 1 Log in to the `VRA01MSSQL01.rainpole.local` by using a Remote Desktop Protocol (RDP) client.
 - a Open an RDP connection to the virtual machine `VRA01MSSQL01.rainpole.local`.
 - b Log in using the following credentials.

Setting	Value
User name	Windows administrator user
Password	<i>windows_administrator_password</i>

- 2 From the **Start** menu, click **Run**, type `WF.msc` in the **Open** text box, and click **OK**.
The Windows Firewall with Advanced Security dialog box appears. You use Windows Firewall with Advanced Security to configure firewall properties for each network profile.
- 3 Allow Access for Microsoft SQL Server on TCP Port 1433.
 - a In the navigation pane, under **Windows Firewall with Advanced Security**, select and right-click **Inbound Rules**, and click **New Rule** in the action pane.
The New Inbound Rule Wizard appears.
 - b On the Rule Type page of the New Inbound Rule Wizard, select the **Port** radio button, and click **Next**.
 - c On the Protocol and Ports page, select **TCP** and enter the port number **1433** in the **Specific local ports** text box, and click **Next**.
 - d On the Action page, select **Allow the connection**, and click **Next**.
 - e On the Profile page, select the **Domain**, **Private**, and **Public** profiles, and click **Next**.
 - f On the Name page, enter a **Name** and **Description** for this rule, and click **Finish**.
- 4 Allow access for Microsoft Distributed Transaction Coordinator.
 - a In the navigation pane, under **Windows Firewall with Advanced Security**, select and right-click **Inbound Rules**, and click **New Rule** in the action pane.
 - b On the Rule Type page click **Predefined**, click **Distributed Transaction Coordinator**, and click **Next**.
 - c On the Predefined Rules page, select all rules for **Distributed Transaction Coordinator (RPC-EPMAP)**, **Distributed Transaction Coordinator (RPC)**, **Distributed Transaction Coordinator (TCP-In)**, and click **Next**.
 - d On the Action page, select **Allow the connection**, and click **Finish**.
- 5 Exit the Windows Firewall with Advanced Security wizard.

Configure Service Account Privileges in Region A

For you to provision virtual machines and logical networks, configure privileges for vRealize Automation for the service account `svc-vra@rainpole.local` on both the Compute vCenter Server and the Compute Cluster NSX instance.

Configure Service Account Privileges on the Compute vCenter Server in Region A

Configure Administrator privileges for the `svc-vra` and `svc-vro` users on the Compute vCenter Server in Region A.

If you add more Compute vCenter Server instances in the future, perform this procedure on those instances as well.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	<code>administrator@vsphere.local</code>
Password	<code>vsphere_admin_password</code>

- 2 In the Navigator pane, select **Global Inventory Lists > vCenter Servers**.
- 3 Right-click the **`sfo01w01vc01.sfo01.rainpole.local`** instance and select **Add Permission**.
- 4 In the Add Permission dialog box, click the **Add** button.
The Select Users/Groups dialog box appears.
- 5 Select **RAINPOLE** from the **Domain** drop-down menu, and in the **Show Users First** text box enter **svc** to filter user and group names.
- 6 Select **svc-vra** and **svc-vro** from the **User/Group** list, click the **Add** button and click **OK**.
- 7 In the Add Permission dialog box, select **Administrator** from the **Assigned Role** drop-down menu and click **OK**.

The `svc-vra` and `svc-vro` users now have **Administrator** privilege on the Compute vCenter Server in Region A.

Configure the Service Account Privilege on the Compute Cluster NSX Instance in Region A

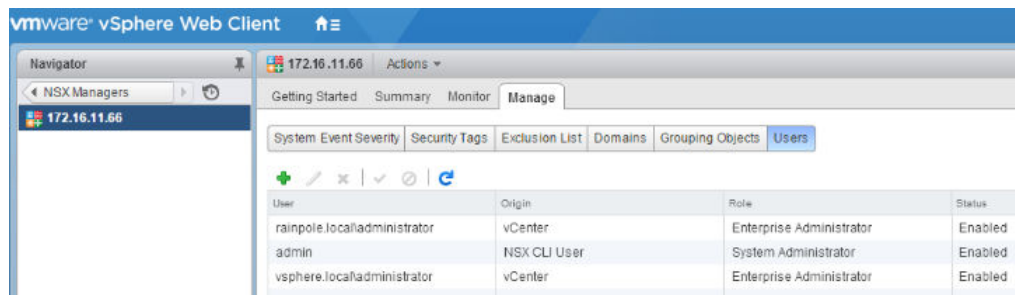

Configure Enterprise Administrator privileges for the svc-vra@rainpole.local service account.

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

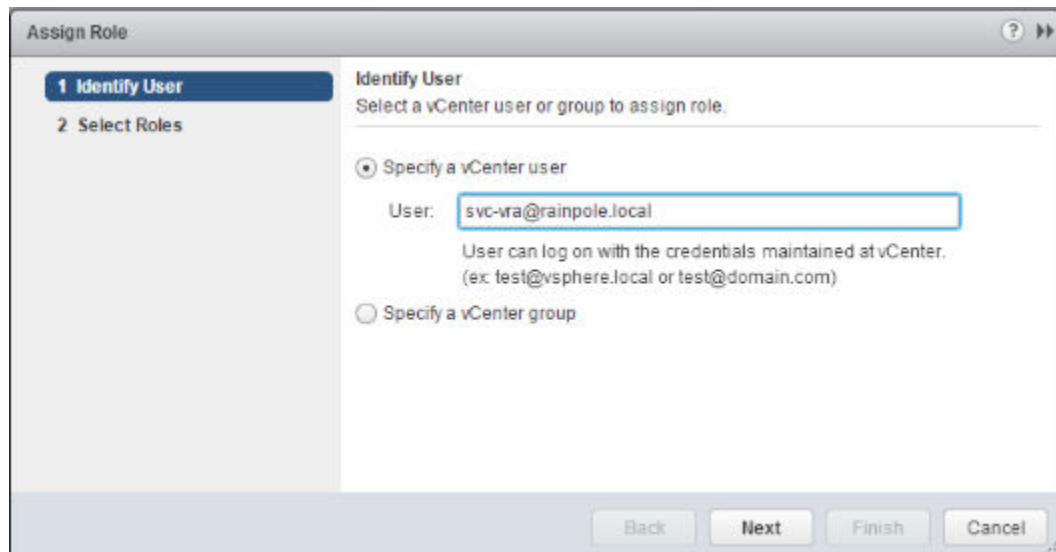

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator pane, select **Networking & Security > NSX Managers**.
- 3 Double-click the Compute NSX Manager **172.16.11.66**.
- 4 Click **Manage**, click **Users**, and click the **Add** icon.

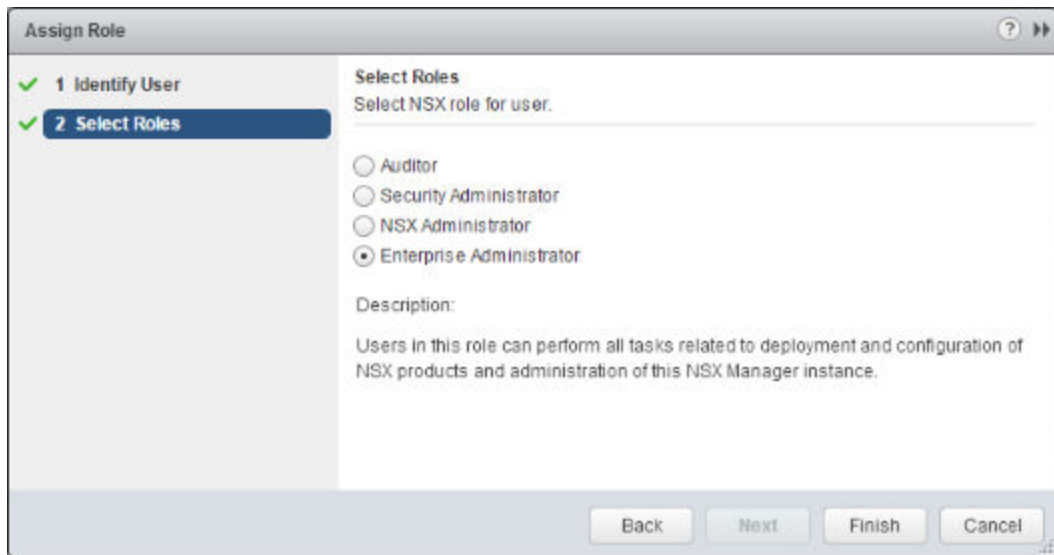

The Assign Role wizard appears.

- 5 On the Identify User page, select the **Specify a vCenter User** radio button, enter **svc-vra@rainpole.local** in the **User** text box, and click **Next**.

- 6 On the Select Roles page, select the **Enterprise Administrator** radio button, and click **Finish**.

The `rainpole\svc-vra` user is now configured as an Enterprise Administrator for the compute cluster NSX instance, and appears in the lists of users and roles.

vRealize Automation Installation in Region A

A vRealize Automation installation includes installing and configuring single sign-on (SSO) capabilities, the user interface portal, and Infrastructure as a Service (IaaS) components.

After installation you can customize the installation environment and configure one or more tenants, which sets up access to self-service provisioning and life-cycle management of cloud services. By using the secure portal Web interface, administrators, developers, or business users can request IT services and manage specific cloud and IT resources based on their roles and privileges. Users can request infrastructure, applications, desktops, and IT service through a common service catalog.

Load Balancing the Cloud Management Platform in Region A

You configure load balancing for all services and components related to vRealize Automation and vRealize Orchestrator by using an NSX Edge load balancer.

You must configure the load balancer before you deploy the vRealize Automation appliance. This is because you need the virtual IP (VIP) addresses to deploy the vRealize Automation appliance.

Add Virtual IP Addresses to the NSX Load Balancer in Region A

As the first step of configuring load balancing, you add virtual IP Addresses to the edge interfaces.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to `https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 From the **NSX Manager** drop-down menu, select **172.16.11.65** as the NSX Manager and double-click the **sfo01m01lb01** NSX Edge to edit its network settings.
- 5 Click the **Manage** tab, click **Settings**, and select **Interfaces**.
- 6 Select the **OneArmLB** interface and click the **Edit** icon.
- 7 In the Edit NSX Edge Interface dialog box, add the VIP addresses of the vRealize Automation nodes in the **Secondary IP Addresses** text box.

Setting	Value
Secondary IP Address	192.168.11.53,192.168.11.56,192.168.11.59

Edit NSX Edge Interface

VNIC#: 0

Name: OneArmLB

Type: Internal

Connected To: Mgmt-xRegion01-VLAN Change Remove

Connectivity Status: ☒ Connected ☐ Disconnected

Configure Subnets:

Primary IP Address	Secondary IP Address	Subnet Prefix Length
192.168.11.2	168.11.53,192.168.11.56,192.168.11.59,192.168.11.65	24

MAC Addresses:

MTU: 9000

Options: ☐ Enable Proxy ARP ☒ Send ICMP Redirect

Reverse Path Filter: Enabled

Fence Parameters:

Example: ethernet0.filter1.param1=1

OK Cancel

- 8 Click **OK** to save the configuration.

Create Application Profiles in Region A

Create an application profile to define the behavior of a particular type of network traffic. After configuring a profile, you associate the profile with a virtual server. The virtual server then processes traffic according to the values specified in the profile. Using profiles enhances your control over managing network traffic, and makes traffic-management tasks easier and more efficient.

You repeat this procedure twice to create two application profiles.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 From the **NSX Manager** drop-down menu, select **172.16.11.65** as the NSX Manager and double-click the **sfo01m01lb01** NSX Edge to manage its network settings.
- 5 Click the **Manage** tab, click **Load Balancer**, and select **Application Profiles**.
- 6 Click the **Add** icon and in the New Profile dialog box, enter the following values.

Setting	Value
Name	vRealize-https-persist

Create Service Monitoring in Region A

The service monitor defines health check parameters for the load balancer. You create a service monitor for each component.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 From the **NSX Manager** drop-down menu, select **172.16.11.65** as the NSX Manager and double-click the **sfo01m01lb01** NSX Edge to manage its network settings.
- 5 Click the **Manage** tab, click **Load Balancer**, and select **Service Monitoring**.
- 6 Click the **Add** icon and in the New Service Monitor dialog box, configure the values for the service monitor you are adding, and click **OK**.

Setting	vra-svr-443-monitor	vra-iws-443-monitor	vra-ims-443-monitor	vra-vro-8283-monitor
Name	vra-svr-443-monitor	vra-iws-443-monitor	vra-ims-443-monitor	vra-vro-8283-monitor
Interval	3	3	3	3
Timeout	10	10	10	10

Extension:

OK Cancel

- 7 Repeat [Step 6](#) to create a service monitor for each component.

Upon completion, verify that you have successfully entered the monitor names and their respective configuration values.

Create Server Pools in Region A

A server pool consists of back-end server members. After you create a server pool, you associate a service monitor with the pool to manage and share the back-end servers flexibly and efficiently.

The following considerations explain the design of the server pools configuration.

- The configuration uses NONE as health monitor for all server pools. Until vRealize Automation is fully installed and started, the health monitor marks pool members as offline. Health monitors indicate the status of pool members correctly, only after vRealize Automaton is fully installed and initialized.
- The configuration disables the second pool member of three vRealize Automation VIPs (vra-svr-443, vra-iaas-web-443, vra-iaas-mgr-443). During the installation or power cycle of vRealize Automation, the service inside the second node might not be installed or initialized yet. In this period of time, if the load balancer passes a request to the second node, the request fails. If the second pool member is not disabled, you can experience random failures during vRealize Automation installation, and service initialization or registration failure during a vRealize Automation power cycle.

Perform the procedure multiple times to configure five different server pools.

Table 3-3. Server Pools for the Cloud Management Platform in Region A

Pool Name	Monitors	Enable Member	Member Name	IP Address	Port	Monitor Port
vra-svr-443	NONE	Yes	vra01svr01a	192.168.11.51	443	443
		No	vra01svr01b	192.168.11.52	443	443
vra-iws-443	NONE	Yes	vra01iws01a	192.168.11.54	443	443
		No	vra01iws01b	192.168.11.55	443	443

		No	vra01ims01b	192.168.11.58	443	443
vra-svr-8444	NONE	Yes	vra01svr01a	192.168.11.51	8444	443
		Yes	vra01svr01b	192.168.11.52	8444	443
vra-vro-8283	NONE	Yes	vra01svr01a	192.168.11.51	8283	8283
		No	vra01svr01b	192.168.11.52	8283	8283

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

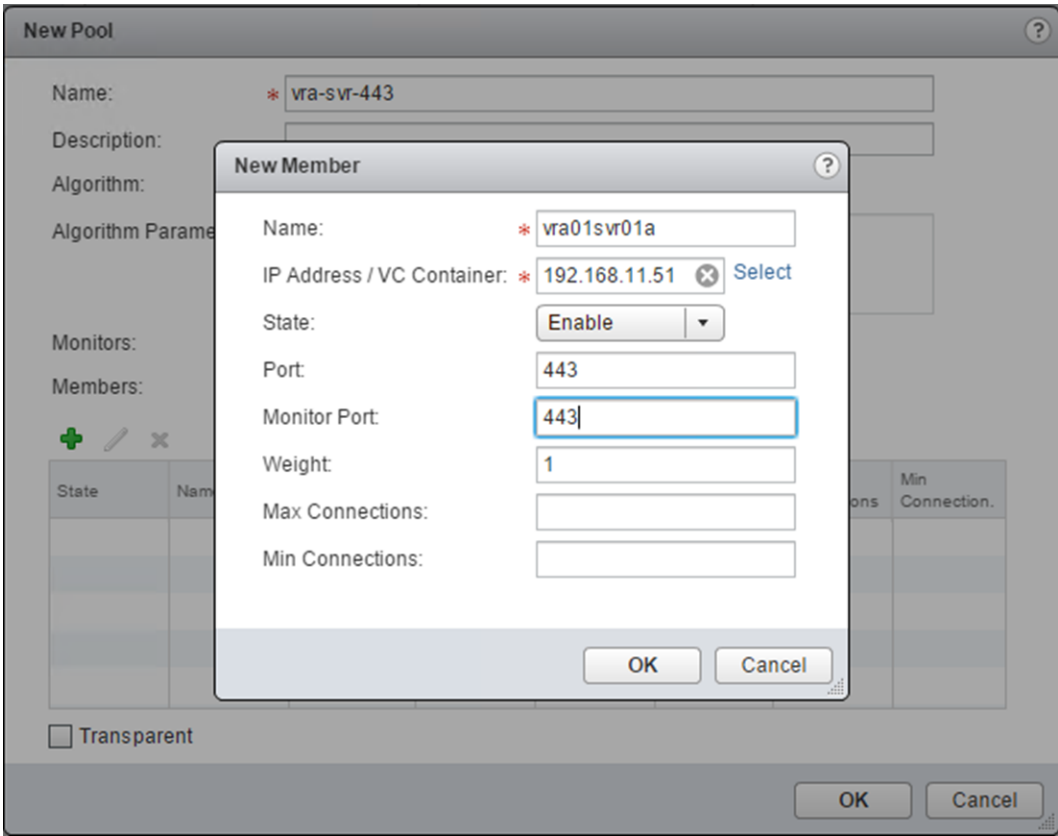

- 2 Click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 From the **NSX Manager** drop-down menu, select **172.16.11.65** as the NSX Manager and double-click the **sfo01m01lb01** NSX Edge to manage its network settings.
- 5 Click the **Manage** tab, click **Load Balancer**, and select **Pools**.
- 6 Click the **Add** icon and in the New Pool dialog box, enter the following values.

Setting	Value
Name	vra-svr-443
Algorithm	ROUND-ROBIN
Monitors	NONE

- 7 New Members dialog box, click the **Add** icon to add the first pool member.
- 8 In the **New Member** dialog box, enter the following values, and click **OK**.

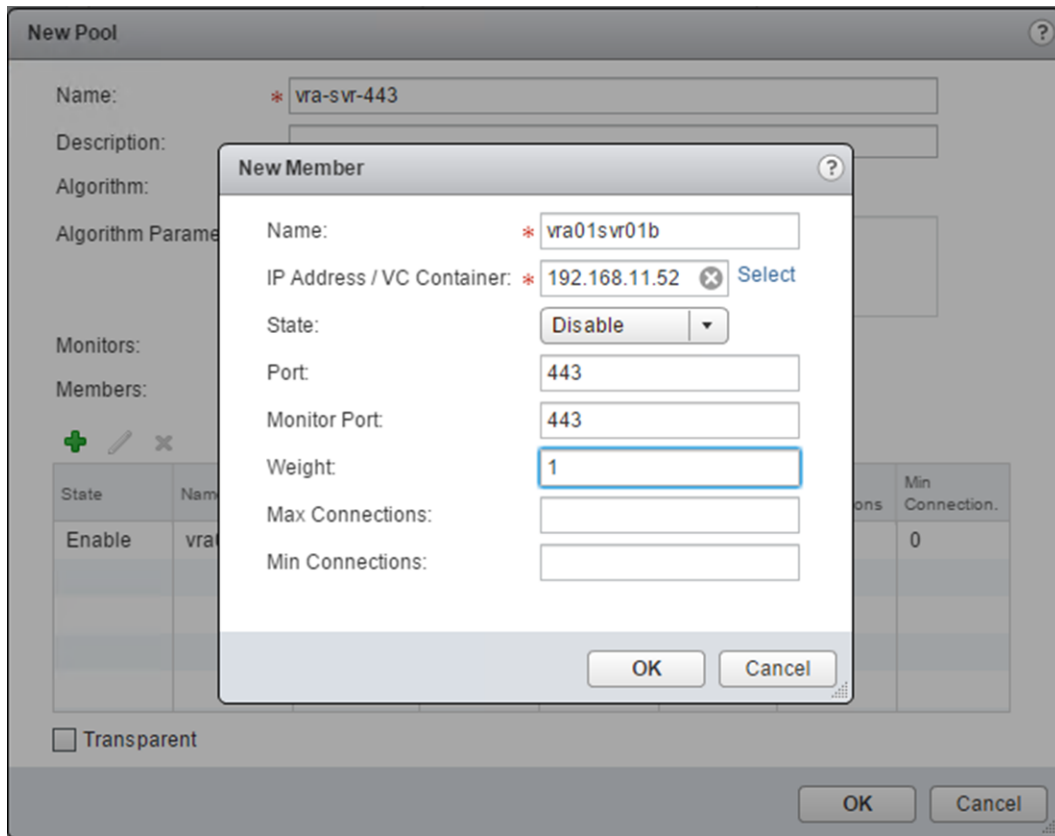

Setting	Value
Name	vra01svr01a
IP Address/VC Container	192.168.11.51
State	Enable
Port	443

Setting	Value
Monitor Port	443
Weight	1

- 9 Under **Members**, click the **Add** icon to add the second pool member.
- 10 In the New Member dialog box, enter the following values, click **OK** and click **OK** to save the vRealize Automation server pool.

Setting	Description
Name	vra01svr01b
IP Address/VC Container	192.168.11.52
State	Disable
Port	443
Monitor Port	443
Weight	1

- 11 Repeat the procedure to create the remaining server pools.

Create Virtual Servers in Region A

After load balancing is set up, the NSX load balancer distributes network traffic across multiple servers. When a virtual server receives a request, it chooses the appropriate pool to send traffic to. Each pool consists of one or more members. You create virtual servers for all of the configured server pools.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Click **Networking & Security**.
- 3 In the Navigator, click **NSX Edges**.
- 4 From the **NSX Manager** drop-down menu, select **172.16.11.65** as the NSX Manager and double-click the **sfo01m01lb01** NSX Edge to manage its network settings.
- 5 Click the **Manage** tab, click **Load Balancer**, and select **Virtual Servers**.

- 6 Click the **Add** icon, and in the New Virtual Server dialog box configure the values for the virtual server you are adding, and click **OK**.

Setting	vra-svr-443	vra-iws-443	vra-ims-443	vra-svr-8444	vra-vro-8283

- 7 Repeat [Step 6](#) to create a virtual server for each component. Upon completion, verify that you have successfully entered the virtual server names and their respective configuration values.

Deploy the vRealize Automation Appliance in Region A

The vRealize Automation appliance is a pre-configured virtual appliance that contains the vRealize Automation server.

The server includes the vRealize Automation appliance product console, which provides a single portal for self-service provisioning and management of cloud services, authoring, administration, and governance.

During deployment of the virtual appliances, a PostgreSQL appliance database is created automatically on the first vRealize Automation appliance. A replica database can be installed on a second vRealize Automation appliance to create a high-availability environment.

Perform this procedure twice to deploy two appliances by using the configuration values for host A for the first appliance, and the configuration values for host B for the second appliance.

Setting	Values for Host A	Values for Host B
Name	vra01svr01a.rainpole.local	vra01svr01b.rainpole.local
Select a folder or datacenter	sfo01-m01fd-vra	sfo01-m01fd-vra
Network	Mgmt-xRegion01-VXLAN (192.168.11.x)	Mgmt-xRegion01-VXLAN (192.168.11.x)
Cluster	sfo01-m01-mgmt01	sfo01-m01-mgmt01
Virtual Disk Format	Thin provision	Thin provision

Network 1 IP Address	192.168.11.51	192.168.11.52
Network 1 Netmask	255.255.255.0	255.255.255.0

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator pane, select **Global Inventory Lists > vCenter Servers**.
- 3 Right-click the **sfo01m01vc01.sfo01.rainpole.local** object and select **Deploy OVF Template**.
- 4 On the Select template page, select **Local file**, browse to the location of the vRealize Automation Virtual Machine Template file on your file system, and click **Next**.
- 5 On the Select name and folder page, enter the following information, and click **Next**.

Setting	Value
Name	vra01svr01a.rainpole.local
Select a folder or datacenter	sfo01-m01fd-vra

- 6 On the Select a Resource page, select cluster **sfo01-m01-mgmt01** and click **Next**.
- 7 On the Review details page, examine the virtual appliance details, such as product, version, download and disk size, and click **Next**.
- 8 On the Accept license agreements page, accept the end user license agreements and click **Next**.
- 9 On the Select storage page, select the datastore.
 - a Select **Thin Provision** from the **Select virtual disk format** drop-down menu.
 - b Select **vSAN Default Storage Policy** from the **VM storage policy** drop-down menu.
 - c From the datastore table, select the **sfo01-m01-vsan01** vSAN datastore and click **Next**.
- 10 On the Setup Networks page, select the distributed port group that ends with **Mgmt-xRegion01-VXLAN** from the **Destination Network** drop-down menu and click **Next**.
- 11 On the Customize template page, configure the following values and click **Next**.

Option	Description
Enable SSH service in the appliance	Selected
Hostname	vra01svr01a.rainpole.local
Initial Root Password	vra_appA_root_password

Domain Search Path	rainpole.local,sfo01.rainpole.local,lax01.rainpole.local
Network 1 IP Address	192.168.11.51
Network 1 Netmask	255.255.255.0

- 12 On the Ready to complete page, review the configuration settings you specified and click **Finish**.
- 13 Click vCenter server **sfo01m01vc01.sfo01.rainpole.local**. Select **VMs** tab. Type **vra01svr01** in the search text box.

- 14 Select virtual machine **vra01svr01a.rainpole.local** and click **Power On** icon.

Wait until the vRealize Automation appliance virtual machine is completely powered on. This may take several minutes.

- 15 From the Virtual Machine Console, verify that **vra01svr01a.rainpole.local** uses the configuration settings you specified.
- 16 Repeat the procedure to deploy the second vRealize Automation virtual machine **vra01svr01b.rainpole.local**.

Deploy Windows Virtual Machines for vRealize Automation in Region A

vRealize Automation requires several Windows virtual machines to act as IaaS components in a distributed configuration. These redundant components provide high availability for the vRealize Automation infrastructure features.

Create vSphere Image Customization Specifications in Region A

Create vSphere image customization specifications to use with your vRealize Automation IaaS Servers and Proxy Agent deployments. The customization specification you create customizes the guest operating systems of the virtual machines that host the vRealize Automation IaaS Web Server and IaaS Manager Services.

Customization specifications are XML files that contain guest operating system settings for virtual machines. You create customization specifications with the Guest Customization wizard, and manage specifications using the Customization Specification Manager. vCenter Server saves the customized configuration parameters in the vCenter Server database. When you clone a virtual machine or deploy a virtual machine from a template, you can customize the guest operating system of the virtual machine to change properties such as the computer name, network settings, and license settings. When you apply an image customization specification to the guest operating system during virtual machine cloning or deployment, you prevent conflicts that might result if you deploy virtual machines with identical settings, such as duplicate computer names.

Create a Customization Specification File for IaaS Servers in Region A

Create a vSphere Image Customization template to use with your vRealize Automation IaaS Servers deployment.

You can supply a custom sysprep answer file as an alternative to specifying many of the settings in the Guest Customization wizard. The vSphere Image Customization template sysprep answer file stores a number of customization settings such as computer name, licensing information, and workgroup or domain settings.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From Home page, under **Operations and Policies**, click **Customization Specification Manager**.
- 3 Select **sfo01m01vc01.sfo01.rainpole.local** from the **vCenter Server** drop-down menu.

- 4 Click the **Create a new specification** icon.

The Guest Customization wizard opens.

- 5 On the Specify Properties page, configure the following values, and click **Next**.

Setting	Value
Target VM Operating System	Windows
Use custom SysPrep answer file	Deselected
Customization Spec Name	vra7-template

- 6 On the Set Registration Information page, configure the following values, and click **Next**.

Setting	Value
Name	Rainpole
Organization	Rainpole IT

- 7 On the Set Computer Name page, select the **Enter a name in the Clone/Deploy wizard** radio button, and click **Next**.

- 8 On the Enter Windows License page, configure the following values, and click **Next**.

If you are using Microsoft License Server, or have multiple single license keys, leave the **Product Key** text box blank.

Setting	Value
Product Key	<i>volume_license_key</i>
Include Server License Information	Selected
Server License Mode	Per seat

- 9 On the Set Administrator Password page, configure the following values, and click **Next**.

Setting	Value
Password	<i>local_administrator_pwd</i>
Automatically logon as Administrator	Selected
Number of times to logon automatically	1

- 10 On the Time Zone page, select **(GMT) Coordinated Universal Time** from the **Time Zone** drop-down menu, and click **Next**.

- 11 On the Run Once page, type **net localgroup administrators rainpole\svc-vra /add** in the text box and click **Add**. This command will add service account rainpole\svc-vra into virtual machine's local administrators group. Click **Next**.

- 12 On the Configure Network page, select the **Manually select custom settings** radio button, select **NIC1** from the list of network interfaces in the virtual machine, and click **Edit**.

The **Edit Network** dialog box opens.

- 13 In the Edit Network dialog box, on the IPv4 page, configure the following values and click **DNS**.

Setting	Value
Prompt the user for an address when the specification is used	Selected
Subnet Mask	255.255.255.0
Default Gateway	192.168.11.1

- 14 On the DNS page, provide DNS servers and search suffixes.

- a Specify the following DNS server settings.

Setting	Value
Use the following DNS server address	Selected
Preferred DNS Server	172.16.11.4
Alternate DNS Server	172.17.11.4

- b Enter **rainpole.local** in the **For all connections with TCP/IP enabled** text box and click the **Add** button.
- c Enter **sfo01.rainpole.local** in the **For all connections with TCP/IP enabled** text box and click the **Add** button.
- d Enter **1ax01.rainpole.local** in the **For all connections with TCP/IP enabled** text box and click the **Add** button.
- e Click **OK** to save settings and close the Edit Network dialog box, and click **Next**.
- 15 On the Set Workgroup or Domain page, enter credentials that have administrative privileges in the domain, and click **Next**.

Setting	Value
Windows Server Domain	rainpole.local
Username	ad_admin_acct@rainpole.local
Password	ad_admin_password

- 16 On the Set Operating System Options page, select the **Generate New Security ID (SID)** check box, and click **Next**.
- 17 On the Ready to complete page, review the configuration settings that you entered, and click **Finish**.
- The customization specification you created is listed in the Customization Specification Manager, and can be used to customize virtual machine guest operating systems.

Create a Customization Specification File for IaaS Proxy Agent Servers in Region A

Create a vSphere Image Customization template to use with your vRealize Automation IaaS Proxy Agent deployment.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

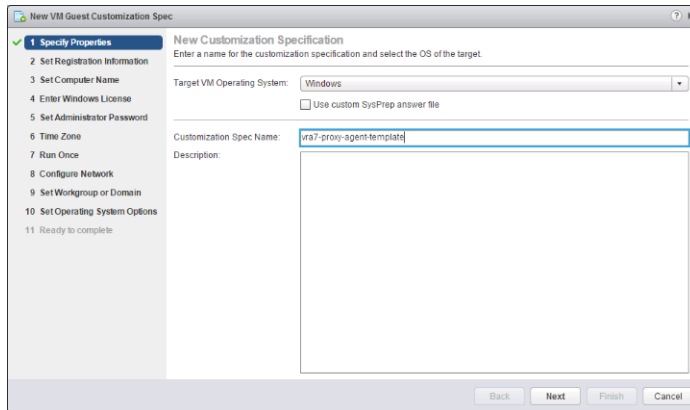

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the Home page, click **Customization Specification Manager**.
- 3 Select **sfo01m01vc01.sfo01.rainpole.local** from the **vCenter Server** drop-down menu.
- 4 Click the **Create a new specification** icon.

The New VMGuest CustomizationSpec wizard opens.

- 5 On the Specify Properties page, enter the following settings, and click **Next**.

Setting	Value
Target VM Operating System	Windows
Use custom SysPrep answer file	Deselected
Customization Spec Name	vra7-proxy-agent-template

- 6 On the Set Registration Information page, enter the following settings, and click **Next**.

Setting	Value
Name	Rainpole
Organization	Rainpole IT

- 7 On the Set Computer Name page, select the **Enter a name in the Clone/Deploy wizard** radio button, and click **Next**.
- 8 On the Enter Windows License page, enter the following settings, and click **Next**.

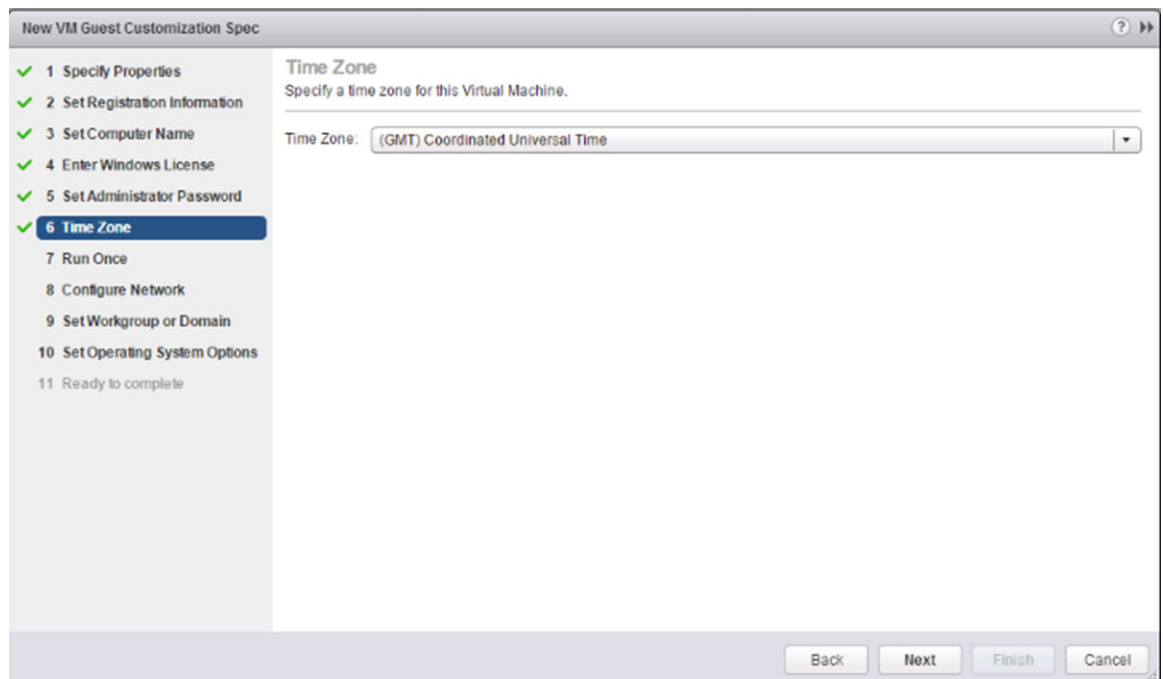

If you are using Microsoft License Server, or have multiple single license keys, leave the **Product Key** text box blank.

Setting	Value
Product Key	<i>volume_license_key</i>
Include Server License Information	Selected
Server License Mode	Per seat

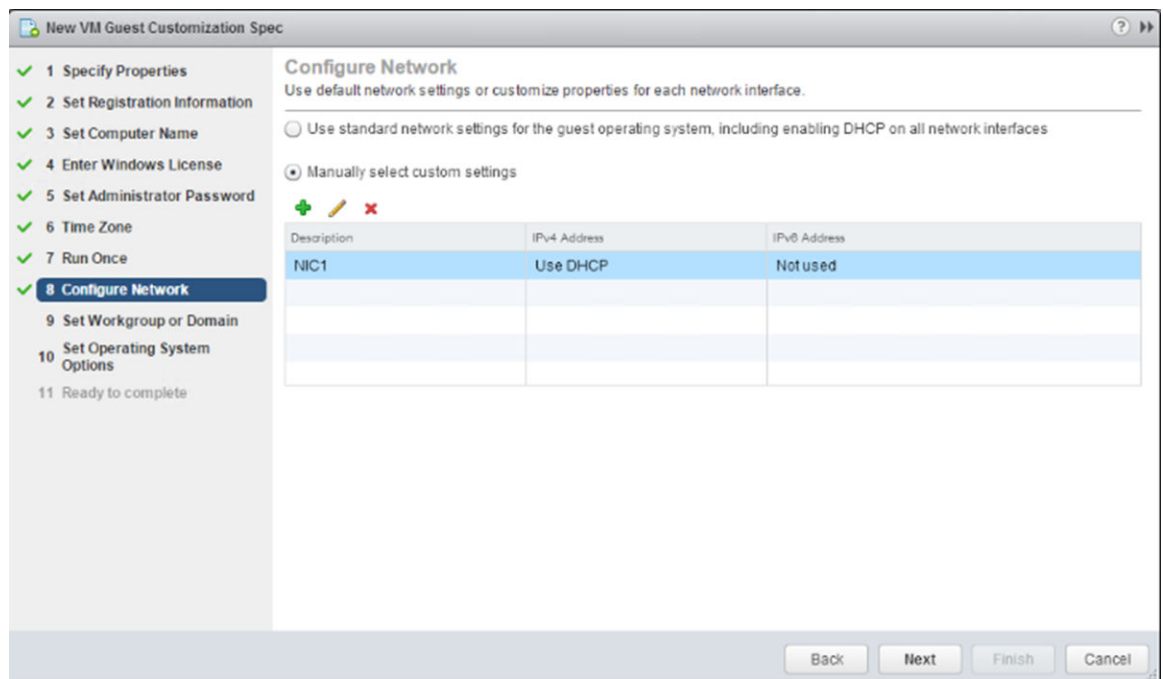

- 9 On the Set Administrator Password page, enter the following settings, and click **Next**.

Setting	Value
Password	<i>local_administrator_pwd</i>
Automatically logon as Administrator	Selected
Number of times to logon automatically	1

- 10 On the Time Zone page, select **(GMT) Coordinated Universal Time** from the **Time Zone** drop-down menu, and click **Next**.

- 11 On the Run Once page, type **net localgroup administrators rainpole\svc-vra /add** in the text box and click **Add**. This command will add service account rainpole\svc-vra into the virtual machine's local administrators group. Click **Next**.
- 12 On the Configure Network page, select the **Manually select custom settings** radio button, select **NIC1** from the list of network interfaces in the virtual machine, and click **Edit**.

The Network Properties dialog box displays.

- 13 In the Edit Network dialog box, on the IPv4 page, specify the following settings and click **DNS**.

Setting	Value
Prompt the user for an address when the specification is used	Selected
Subnet Mask	255.255.255.0
Default Gateway	192.168.31.1

The screenshot shows the 'NIC1 - Edit Network' dialog box with the 'IPv4' tab selected. The left sidebar has 'IPv4', 'IPv6', 'DNS', and 'WINS' options. The main area is titled 'Specify IPv4 settings for the virtual network adapter.' and contains three radio buttons: 'Use DHCP to obtain an IP address automatically', 'Prompt the user for an address when the specification is used' (which is selected), and 'Use an application configured on the vCenter Server to generate an IP address'. Below the radio buttons is an 'Argument' text box. Under the 'Use the following IP settings' section, there are four text boxes: 'IP Address', 'Subnet Mask' (containing '255.255.255.0'), 'Default Gateway' (containing '192.168.31.1'), and 'Alternate Gateway'. At the bottom right are 'OK' and 'Cancel' buttons.

- 14 On the DNS page, provide DNS servers and search suffixes.
- a Specify the following DNS server settings.

Setting	Value
Use the following DNS server address	Selected
Preferred DNS Server	172.16.11.4
Alternate DNS Server	172.16.11.5

- b Enter **sfo01.rainpole.local** in the **For all connections with TCP/IP enabled** text box and click the **Add** button.
- c Enter **rainpole.local** in the **For all connections with TCP/IP enabled** text box and click the **Add** button.
- d Enter **1ax01.rainpole.local** in the **For all connections with TCP/IP enabled** text box and click the **Add** button.
- e Click **OK** to save settings and close the Edit Network dialog box, and click **Next**.

- 15 On the Set Workgroup or Domain page, enter credentials that have administrative privileges in the domain, and click **Next**.

Setting	Value
Windows Server Domain	sfo01.rainpole.local
Username	ad_admin_acct@sfo01.rainpole.local
Password	ad_admin_password

- 16 On the Set Operating System options page, select the **Generate New Security ID (SID)** check box, and click **Next**.
- 17 On the Ready to Complete page, review the settings that you entered, and click **Finish**.

The customization specification you created is listed in the Customization Specification Manager, and can be used to customize virtual machine guest operating systems.

Create Windows Virtual Machines for vRealize Automation in Region A

vRealize Automation requires several Windows virtual machines to act as IaaS components in a distributed configuration. These redundant components provide high availability for the vRealize Automation infrastructure features.

To facilitate cloning, this design uses the vra7-template and the vra7-proxy-agent-template image customization specification templates and the windows-2012r2-64 VM template. A fully redundant vRealize Automation deployment requires eight virtual machines that run on Windows. Repeat this procedure eight times by using the information in the following table to create eight VMs.

Name for Virtual Machines	NetBIOS name	vCenter Folder	IP	vCPU number	Memory Size	Image Customization Specification Template	Network
vra01iws01a.rainpole.local	vra01iws01a	sfo01-m01fd-vra	192.168.11.54	2	4 GB	vra7-template	vxw-dvs-xxxx-Mgmt-xRegion01-VXLAN
vra01iws01b.rainpole.local	vra01iws01b	sfo01-m01fd-vra	192.168.11.55	2	4 GB	vra7-template	vxw-dvs-xxxx-Mgmt-xRegion01-VXLAN
vra01ims01a.rainpole.local	vra01ims01a	sfo01-m01fd-vra	192.168.11.57	2	4 GB	vra7-template	vxw-dvs-xxxx-Mgmt-xRegion01-VXLAN
vra01ims01b.rainpole.local	vra01ims01b	sfo01-m01fd-vra	192.168.11.58	2	4 GB	vra7-template	vxw-dvs-xxxx-Mgmt-xRegion01-VXLAN
vra01dem01a.rainpole.local	vra01dem01a	sfo01-m01fd-vra	192.168.11.60	2	6 GB	vra7-template	vxw-dvs-xxxx-Mgmt-xRegion01-VXLAN

Name for Virtual Machines	NetBIOS name	vCenter Folder	IP	vCPU number	Memory Size	Image Customization Specification Template	Network
vra01dem01b.rainpole.local	vra01dem01b	sfo01-m01fd-vra	192.168.11.61	2	6 GB	vra7-template	vxw-dvs-xxxx-Mgmt-xRegion01-VXLAN
sfo01ias01a.sfo01.rainpole.local	sfo01ias01a	sfo01-m01fd-vraias	192.168.31.52	2	4 GB	vra7-proxy-agent-template	vxw-dvs-xxxx-Mgmt-RegionA01-VXLAN
sfo01ias01b.sfo01.rainpole.local	sfo01ias01b	sfo01-m01fd-vraias	192.168.31.53	2	4 GB	vra7-proxy-agent-template	vxw-dvs-xxxx-Mgmt-RegionA01-VXLAN

Prerequisites

- Verify that you have created the Windows 2012 R2 VM template, windows2012r2-template.
- SHA512 is disabled in Windows for TLS 1.2 by default. If SHA512 certificates will be used for vRealize Automation, you need to install the windows update in Microsoft KB2973337.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator pane, select **Global Inventory Lists > vCenter Servers**. Click the **sfo01m01vc01.sfo01.rainpole.local** instance.
- 3 Click **VM Templates in Folders**, and from the VM Templates in Folders pane, right-click the IaaS windows template **windows2012r2-template** and select **New VM from this Template**.
- 4 On the Select a name and folder page of the Deploy From Template wizard, specify a name and location for the virtual machine.
 - a Enter **vra01iws01a.rainpole.local** in the **Enter a name for the virtual machine** text box.
 - b In the Select a location for the virtual machine pane, select the **sfo01-m01fd-vra** folder in the **sfo01-m01dc** datacenter under **sfo01m01vc01.sfo01.rainpole.local**, and click **Next**.
- 5 On the Select a compute resource page, select **sfo01-m01-mgmt01** and click **Next**.
- 6 On the Select storage page, select the datastore on which to create the virtual machine's disks.
 - a Select **vSAN Default Storage Policy** from the **VM Storage Policy** drop-down menu.
 - b Select the **sfo01-m01-vsan01** vSAN datastore from the datastore table and click **Next**.
- 7 On the Select Clone options page, select the **Customize the operating system** check box, and click **Next**.

- 8 On the Customize guest OS page, select the **vra7-template** from the table, and click **Next**.
- 9 On the User Settings page, enter the following values, and click **Next**.

Setting	Value
NetBIOS name	vra01iws01a
IPv4 address	192.168.11.54
IPv4 subnet mask	255.255.255.0

win2k12r2_template - Deploy From Template

1 Edit settings

- ✓ 1a Select a name and folder
- ✓ 1b Select a compute resource
- ✓ 1c Select storage
- ✓ 1d Select clone options
- ✓ 1e Customize guest OS
- 1f User Settings**

2 Ready to complete

User Settings
The customization specification requires the user to provide the following settings for the new virtual machine:

Computer Name

NetBIOS name:
The name cannot exceed 63 characters.

Network Adapter 1 Settings

IPv4 address:
IPv4 subnet mask:

Back Next Finish Cancel

- 10 On the Ready to Complete page, review your settings and click **Finish**.
When the deployment of the virtual machine completes, you can customize the virtual machine.
- 11 In the Navigator, select **VMs and Templates**.
- 12 Right-click the **vra01iws01a.rainpole.local** virtual machine and select **Edit Settings**.
- 13 Click **Virtual Hardware** and configure the settings for **CPU**, **Memory**, and the **Network adapter 1**.
 - a Select **2** from the **CPU** drop-down menu.
 - b Set the **Memory** settings to **4096 MB**.
 - c Expand **Network adapter 1** and select **vxw-dvs-xxxx-Mgmt-xRegion01-VXLAN** from the drop-down menu and click **OK**.
- 14 Right-click the virtual machine **vra01iws01a.rainpole.local**, and select **Power > Power on**.
- 15 From the Virtual Machine Console, verify that vra01iws01a.rainpole.local re-boots, and uses the configuration settings that you specified.

After the Windows customization process completes, a clean desktop appears.

- 16 Log in to the Windows operating system and perform final verification and customization.
 - a Verify that the IP address, computer name, and domain are correct.
 - b Verify vRealize Automation service account svc-vra@rainpole.local has been added to the Local Administrators Group.

NOTE You may notice that the virtual machine failed to execute all the steps in the customization specification. When this occurs:

- Delete the virtual machine and its customization specification.
- Retry creating the Windows virtual machines for the IaaS components by creating a new customization specification and provisioning a virtual machine using the newly recreated customization specification.

For information on creating a new customization specification, see [Create a Customization Specification File for IaaS Servers in Region A](#). For information on creating Windows virtual machines for the IaaS components, see the current topic, “[Create Windows Virtual Machines for vRealize Automation in Region A](#),” on page 184.

- 17 Repeat this procedure to deploy and configure the remaining virtual machines.

Install vRealize Automation Management Agent on Windows IaaS VMs in Region A

For each Windows virtual machine deployed as part of the vRealize Automation installation, a management agent must be deployed to facilitate the installation of the Windows dependencies and vRealize Automation components.

Perform this procedure multiple times to install the Management Agent on all Windows IaaS virtual machines listed below.

- vra01iws01a.rainpole.local
- vra01iws01b.rainpole.local
- vra01dem01a.rainpole.local
- vra01dem01b.rainpole.local
- vra01ims01a.rainpole.local
- vra01ims01b.rainpole.local
- sfo01ias01a.sfo01.rainpole.local
- sfo01ias01b.sfo01.rainpole.local

Procedure

- 1 Log in to the **vra01iws01.rainpole.local** virtual machine console using the vRealize Automation service account.

Setting	Value
Username	Rainpole\svc-vra
Password	svc-vra_password

- 2 Download the vRealize Management Agent.
 - a Open a Web browser and go to **https://vra01svr01a.rainpole.local:5480/installer**.
 - b Download the Management Agent Installer .msi package.

- 3 Install the vRealize Management Agent.
 - a Start the vCAC-IaaSManagementAgent-Setup.msi installer.
 - b On the Welcome page, click **Next** to start the install process.
 - c On the EULA page, select the **I accept the terms of this agreement** check box and click **Next**.
 - d On the Destination Folder page, click **Next** to install in the default path.
 - e On the Management Site Service page, enter the following settings and click **Load**.

Setting	Value
vRA Appliance Address	https://vra01svr01a.rainpole.local:5480
Root username	root
Password	vra_appA_root_password
 - f Select the **I confirm the fingerprint matches the Management Site Service SSL certificate** check box, and click **Next**.
- 4 On the Management Agent Account Configuration page, enter the following credentials and click **Next**.

Setting	Value
Username	rainpole\svc-vra
Password	svc-vra_password
- 5 On the Ready to Install page, click **Install**.
- 6 Repeat the procedure to install the Management Agent on the remaining Windows IaaS virtual machines.

Install the vRealize Automation Environment in Region A

You use the Installation wizard to deploy a distributed installation with load balancers for high availability and failover.

Once you start the wizard you must complete it. If you cancel the wizard, you must redeploy the appliance to run the wizard again.

Procedure

- 1 Log in to the first vRealize Automation appliance.
 - a Open a Web browser and go to **https://vra01svr01a.rainpole.local:5480/**.
 - b Log in using the following credentials.

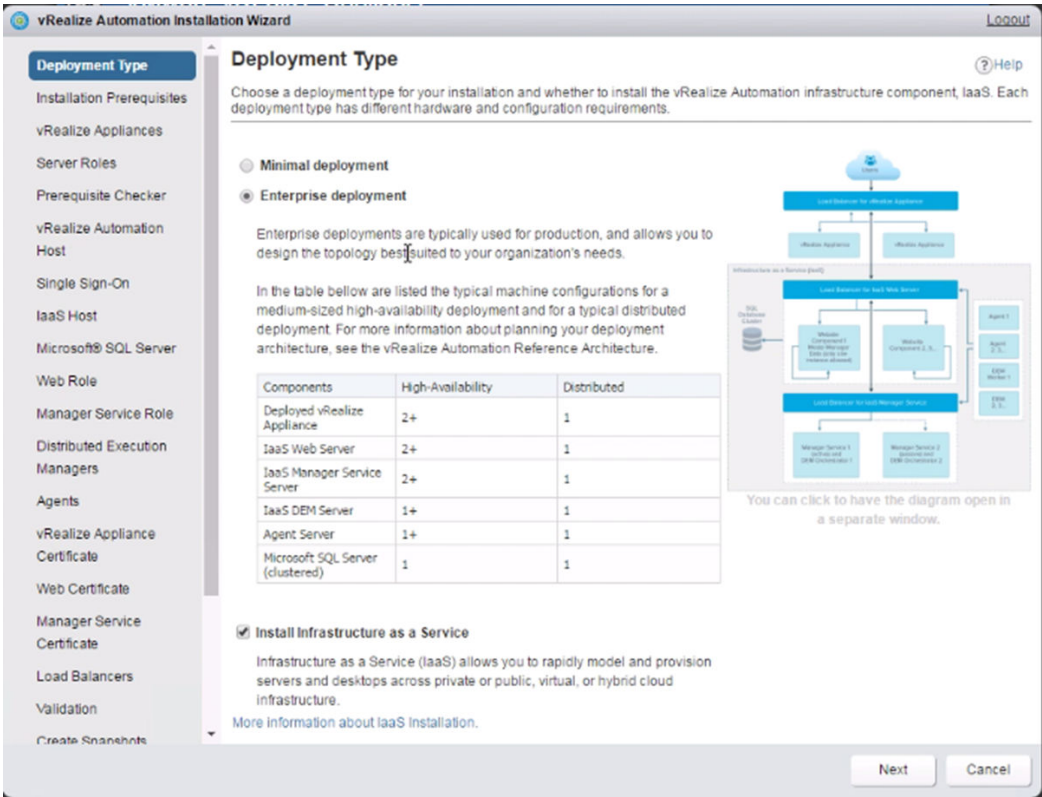

Setting	Value
User name	root
Password	vra_appA_root_password

The vRealize Automation Installation wizard appears.

- 2 On the Welcome to the vRealize Automation Installation Wizard page, click **Next**.
- 3 On the End User License Agreement page, accept the terms of the agreement and click **Next**.

- 4 On the Deployment Type page, specify the following settings and click **Next**.

Setting	Value
Enterprise deployment	Selected
Install Infrastructure as a Service	Selected

- 5 On the Installation Prerequisites page, specify the following time server settings, click **Change Time Settings**, and click **Next**.

Option	Value
Virtual Appliance Time Sync. Mode	Use Time Server
Time Server	ntp.sfo01.rainpole.local
Time Server	ntp.lax01.rainpole.local

- 6 On the Discovered Hosts page, verify that all Windows IaaS virtual machines are listed and that the time offset is within the -1 / 0 / 1 values and click **Next**.

NOTE The Time Offset column shows the time delta between the vRealize Automation appliance and the Windows IaaS VMs. Time synchronization is critical. If there are values outside of the acceptable values, remediate those before you proceed.

- 7 On the vRealize Appliances page, enter the following settings to add the second vRealize Appliance based on the table below, click **Next**.

Setting	Value
Host	vra01svr01b.rainpole.local
Admin User	root
Password	<i>vra_appB_root_password</i>

- 8 In the pop up certificate warning message box, click **OK** to proceed.
- 9 On the Server Roles page, select the respective check boxes for each server based on their role and click **Next**.

Hosts	Role
vra01iws01a.rainpole.local	Initial Web Server and Model Manager
vra01iws01b.rainpole.local	Other Webs
vra01ims01a.rainpole.local	Manager Service
vra01ims01b.rainpole.local	Manager Service
vra01dem01a.rainpole.local	DEM
vra01dem01b.rainpole.local	DEM
sfo01ias01a.sfo01.rainpole.local	Agent
sfo01ias01b.sfo01.rainpole.local	Agent

- 10 On the Prerequisite Checker page, verify that the Windows servers for IaaS components are correctly configured.
- Click **Run** and wait for the prerequisite checker to complete.
 - If warnings appear, click **Fix**.
 - Verify that the status of all IaaS components changes to **OK** and click **Next**.
- 11 On the vRealize Automation Host page, enter **vra01svr01.rainpole.local** in the **vRealize Address** text box and click **Next**.
- 12 On the Single Sign-On page, enter and confirm *vra_administrator_password* for the default tenant account administrator@vsphere.local, and click **Next**.
- 13 On the IaaS Host page, configure the following values and click **Next**.

Option	Value
IaaS Web Address	vra01iws01.rainpole.local
Manager Service Address	vra01ims01.rainpole.local
Security Passphrase	<i>sql_db_pass</i>
Confirm Passphrase	<i>sql_db_pass</i>

- 14 On the Microsoft SQL Server page, configure the following values, click **Validate**, wait for successful validation, and click **Next**.

Option	Value
Server Name	vra01mssql01.rainpole.local
Database Name	VRADB-01
Create new database	Selected

Option	Value
Default Settings	Selected
Use SSL for database connection	Deselected
Windows Authentication	Selected

- 15 On the Web Role page, configure the following values for the IaaS servers, click **Validate**, wait for successful validation, and click **Next**.

Setting	Value
Website Name	Default Web Site
Port	443
vra01iws01a.rainpole.local Username	rainpole.local\svc-vra
vra01iws01a.rainpole.local Password	svc-vra_password
vra01iws01b.rainpole.local Username	rainpole.local\svc-vra
vra01iws01b.rainpole.local Password	svc-vra_password

The screenshot shows the 'Web Role' configuration page in the vRealize Automation Installation Wizard. The left sidebar lists various components, with 'Web Role' selected. The main area contains the following sections:

- Web Role**: Specify the Website and provide login credentials. A green checkmark indicates 'All parameters are valid.'
- Advanced Configuration**: Specify the IIS (Internet Information Services) Website name and port for the IaaS web components.
 - Website Name**: Default Web Site
 - Port**: 443
- IaaS Web Servers**: Specify login credentials for the IIS application pools for the web components in your deployment.

IaaS Host Name	* Username	* Password	Installation Path (Optional)
vra01iws01b.rainpole.local	rainpole.local\svc-vra	*****	(Optional)
vra01iws01a.rainpole.local	rainpole.local\svc-vra	*****	(Optional)

At the bottom, there are buttons for 'Validate', 'Previous', 'Next', and 'Cancel'. The 'Validate' button is highlighted.

- 16 On the Manager Service Role page, configure the following values for the IaaS Web servers, click **Validate**, wait for successful validation, and click **Next**.

Active	IaaS Host Name	Username	Password
Selected	vra01ims01a.rainpole.local	rainpole.local\svc-vra	svc-vra_password
Deselected	vra01ims01b.rainpole.local	rainpole.local\svc-vra	svc-vra_password

vRealize Automation Installation Wizard Logout

Manager Service Role

Specify the Manager Service and provide login credentials.

✓ All parameters are valid.

vRealize Automation supports an active/passive configuration for the Manager Service. Select a host to be the active Manager Service.

Active	IaaS Host Name	* Username	* Password	Installation Path (Optional)
<input checked="" type="checkbox"/>	vra01ms01a.rainpole.local	rainpole.local\svc-vra	*****	(Optional)
<input type="checkbox"/>	vra01ms01b.rainpole.local	rainpole.local\svc-vra	*****	(Optional)

Validate Previous **Next** Cancel

- 17 On the Distributed Execution Managers page, click the **Add** icon as needed, specify the following settings, click **Validate**, wait for successful validation, and click **Next**.

IaaS Host Name	Instance Name	Username	Password
vra01dem01a	DEM-WORKER-01	rainpole.local\svc-vra	<i>svc-vra_password</i>
vra01dem01a	DEM-WORKER-02	rainpole.local\svc-vra	<i>svc-vra_password</i>
vra01dem01a	DEM-WORKER-03	rainpole.local\svc-vra	<i>svc-vra_password</i>
vra01dem01b	DEM-WORKER-04	rainpole.local\svc-vra	<i>svc-vra_password</i>
vra01dem01b	DEM-WORKER-05	rainpole.local\svc-vra	<i>svc-vra_password</i>
vra01dem01b	DEM-WORKER-06	rainpole.local\svc-vra	<i>svc-vra_password</i>

- 18 On the Agents page, configure the following values, click **Validate**, wait for successful validation, and click **Next**.

IaaS Host Name	Agent Name	Endpoint	Agent Type	Username	Password
sfo01ias01a.sfo01.rainpole.local	VSPHERE-AGENT-01	sfo01w01vc01.sfo01.rainpole.local	vSphere	rainpole.local\svc-vra	<i>svc-vra_password</i>
sfo01ias01b.sfo01.rainpole.local	VSPHERE-AGENT-01	sfo01w01vc01.sfo01.rainpole.local	vSphere	rainpole.local\svc-vra	<i>svc-vra_password</i>

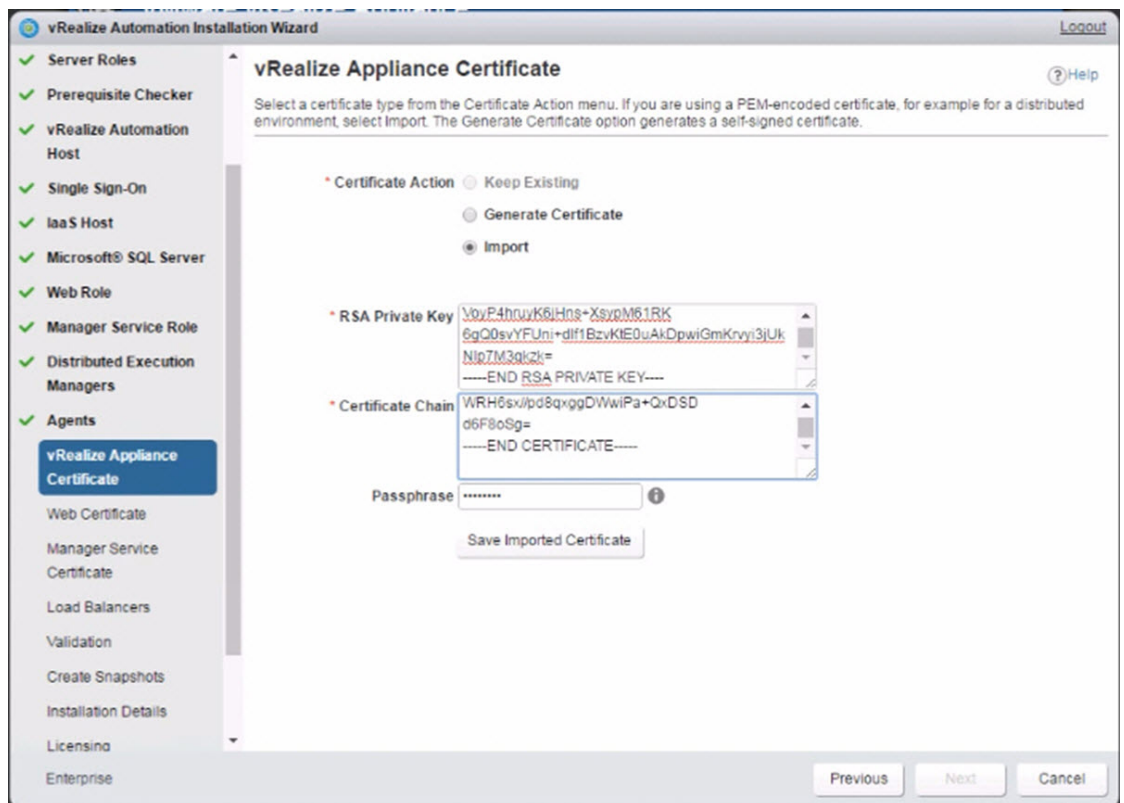

- 19 On the next three certificates configuration pages, configure the certificates for all vRealize Automation.

You complete three different certificate configuration pages for the different nodes using the same process and values from the `vra.key` file for the Private Key and the `vra.3.pem` file for all certificates stored in the `vra` folder. For more information on certificate configuration, see "Use the Certificate Generation Utility to Generate CA-Signed Certificates for the SDDC Management Components" in the *VMware Validated Design Planning and Preparation* document.

- a On the vRealize Appliance Certificate page, specify the following settings, click **Save Imported Certificate**, and click **Next**.

Setting	Value
Certificate Action	Import
RSA Private Key	-----END RSA PRIVATE KEY-----BEGIN RSA PRIVATE KEY----- <i>private_key_value</i>
Certificate Chain	-----BEGIN CERTIFICATE----- <i>Server_certificate_value</i> -----END CERTIFICATE-----BEGIN CERTIFICATE----- <i>Intermediate_CA_certificate_value</i> ----- END CERTIFICATE-----BEGIN CERTIFICATE----- <i>Root_CA_certificate_value</i> ----- END CERTIFICATE-----
Passphrase	<i>vra_cert_passphrase</i>

- b Repeat this step on the Web Certificate and the Manager Service Certificate pages of the vRealize Automation Installation Wizard.

- 20 On the Load Balancers page, click **Next**.

NOTE You configured load balancing in "Load Balancing the Cloud Management Platform in Region A," on page 166

- 21 On the Validation page, click **Validate**, wait for successful validation, and click **Next**.
- 22 On the Create Snapshots page, do not close the wizard. Snapshot each of the vRealize Automation virtual machines using the following instructions.

- a In a browser, go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client** to log in to vCenter Server.
- b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- c From the Home page, click **VMs and Templates**.
- d In the Navigator, expand the **sfo01m01vc01.sfo01.rainpole.local > sfo01-m01dc > sfo01-m01fd-vra** folder.
- e Right-click the **vra01dem01a.rainpole.local** VM and select **Snapshots > Take Snapshot**.
- f In the Take VM Snapshot dialog box, specify the following settings and click **OK**.

Setting	Value
Name	Prior to vRA IaaS component installation
Snapshot the virtual machine's memory	Deselected
Quiesce guest file system	Deselected

- g Repeat the step to create snapshots of the remaining vRealize Automation VMs.

Virtual Machine	vCenter Folder
vra01svr01a.rainpole.local	sfo01-m01fd-vra
vra01svr01b.rainpole.local	sfo01-m01fd-vra
vra01mssql01.rainpole.local	sfo01-m01fd-vra
vra01iws01a.rainpole.local	sfo01-m01fd-vra
vra01iws01b.rainpole.local	sfo01-m01fd-vra
vra01ims01a.rainpole.local	sfo01-m01fd-vra
vra01ims01b.rainpole.local	sfo01-m01fd-vra
vra01dem01a.rainpole.local	sfo01-m01fd-vra
vra01dem01b.rainpole.local	sfo01-m01fd-vra
sfo01ias01a.sfo01.rainpole.local	sfo01-m01fd-vraias
sfo01ias01b.sfo01.rainpole.local	sfo01-m01fd-vraias

After you create snapshots of all virtual machines, return to the vRealize Automation Installation wizard.

- 23 On the Create Snapshots page, click **Next**.
- 24 On the Installation Details page, click **Install**.
- 25 On the Installation Details page, verify that all items complete successfully and click **Next**.
- 26 On the Licensing page, enter your *vRealize_Automation_License_Key*, click **Submit Key**, and click **Next**.
- 27 On the Telemetry page, select **Join the VMware Customer Experience Improvement Program** and click **Next**.

- 28 On the Post-Installation Options page, select **Continue** to proceed without creating initial content and click **Next**.
- 29 Click **Finish** to exit the wizard.

Configure vRealize Automation for a Large Scale Deployment in Region A

Increase the value of the ProxyAgentBinding and maxStringContentLength attributes to configure vRealize Automation Management Service to contain a large amount of data objects. For example, 3000 or more virtual machines from vSphere Center Server.

Procedure

- 1 Log into the vra01ims01a.rainpole.local virtual machine console as the user rainpole\svr-vra.
 - 2 Click the **Start** button on the taskbar to display the menu, enter **Notepad** in the search box, and click **Notepad** in the search results.
-
- NOTE** Alternatively you can use any text editor installed on the Windows operating system in your environment that you prefer.
-
- 3 Right-click the **Notepad** application icon, or your preferred text editor, and select **Run As Administrator**.
 - 4 Open the file C:\Program Files (x86)\VMware\VCAC\Server\ManagerService.exe.config for editing in Notepad or your preferred text editor.
 - 5 Locate the following line in the ManagerService.exe.config file.

```
<binding name="ProxyAgentServiceBinding" maxReceivedMessageSize="13107200">
<readerQuotas maxStringContentLength="13107200" />
```

NOTE Do not confuse these two lines with the lines that are very similar, but with the attribute binding name = "ProvisionServiceBinding".

- 6 Replace the values of the following attributes by increasing them by a factor of 10 as shown in the table below.

Parameter	Values
maxReceivedMessageSize	131072000
maxStringContentLength	131072000

- 7 Save your changes to the ManagerService.exe.config file, close it, and exit the text editor.
- 8 Click **Start**, and then click **Restart** to restart the virtual machine.
- 9 Repeat this procedure for the vra01ims01b.rainpole.local virtual machine.

vRealize Automation Default Tenant Configuration in Region A

In shared cloud environments, where multiple companies, divisions or independent groups are using a common infrastructure fabric, it is necessary to set up virtual private clouds where authentication, resources, policy are customized to the needs of each group. Tenants are useful for isolating the users, resources and services of one tenant from those of other tenants.

Create a Local Tenant Administrator in Region A

Join the VMware Identity Manager connectors to the Active Directory domain to support Integrated Windows Authentication. Perform this operation in the default tenant **vsphere.local**.

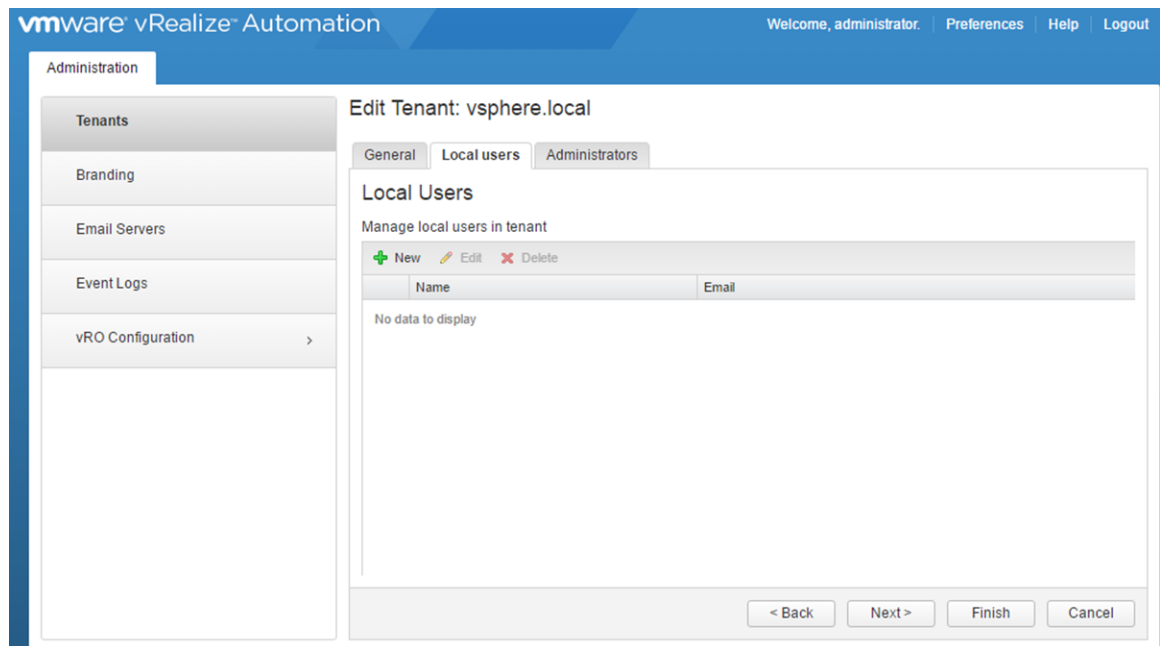

Create a local user for the default tenant in vRealize Automation and assign the Tenant Administrator role to the default tenant.

Procedure

- 1 Log in to the vRealize Automation portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator
Password	<i>vra_administrator_password</i>

- 2 On the Tenants page, click the default tenant **vsphere.local** to edit its settings.
- 3 Click the **Local users** tab and click **New** to add a local user to the default tenant.

- 4 In the User Details dialog box, specify the following settings, click **OK**, and click **Next**.

Setting	Value
First name	ITAC
Last name	LocalDefaultAdmin
Email	ITAC-LocalDefaultAdmin@vsphere.local
User name	ITAC-LocalDefaultAdmin
Password	<i>itac-localdefaultadmin_password</i>
Confirm password	<i>itac-localdefaultadmin_password</i>

User Details:

* First name:

ITAC

* Last name:

LocalDefaultAdmin

* Email:

ITAC-LocalDefaultAdmin@

* User name:

ITAC-LocalDefaultAdmin

* Password:

* Confirm password:

OK

Cancel

- 5 On the **Administrators** tab, specify tenant and infrastructure administrators.
 - a In the **Tenant administrators** search text box, enter **ITAC-LocalDefaultAdmin** and press Enter.
 - b In the **IaaS administrators** search text box, enter **ITAC-LocalDefaultAdmin** and press Enter.
 - c Click **Finish**.

The screenshot shows the 'Edit Tenant: vsphere.local' configuration page in VMware vRealize Automation. The left sidebar lists 'Administration' with sub-items: Tenants, Branding, Email Servers, Event Logs, and vRO Configuration. The main content area has tabs for 'General', 'Local users', and 'Administrators'. The 'Administrators' tab is selected, displaying two sections: 'Tenant administrators' and 'IaaS administrators'. Each section has a search box and a table with one entry: 'ITAC LocalDefaultAdmin (ITAC-LocalID...)'. At the bottom right, there are buttons for '< Back', 'Next >', 'Finish', and 'Cancel'.

- 6 Log out from the vRealize Automation portal.

Join Connectors to an Active Directory Domain in Region A

To use an Active Directory domain for tenant authentication, you must join a VMware Identity Manager connector to vRealize Automation.

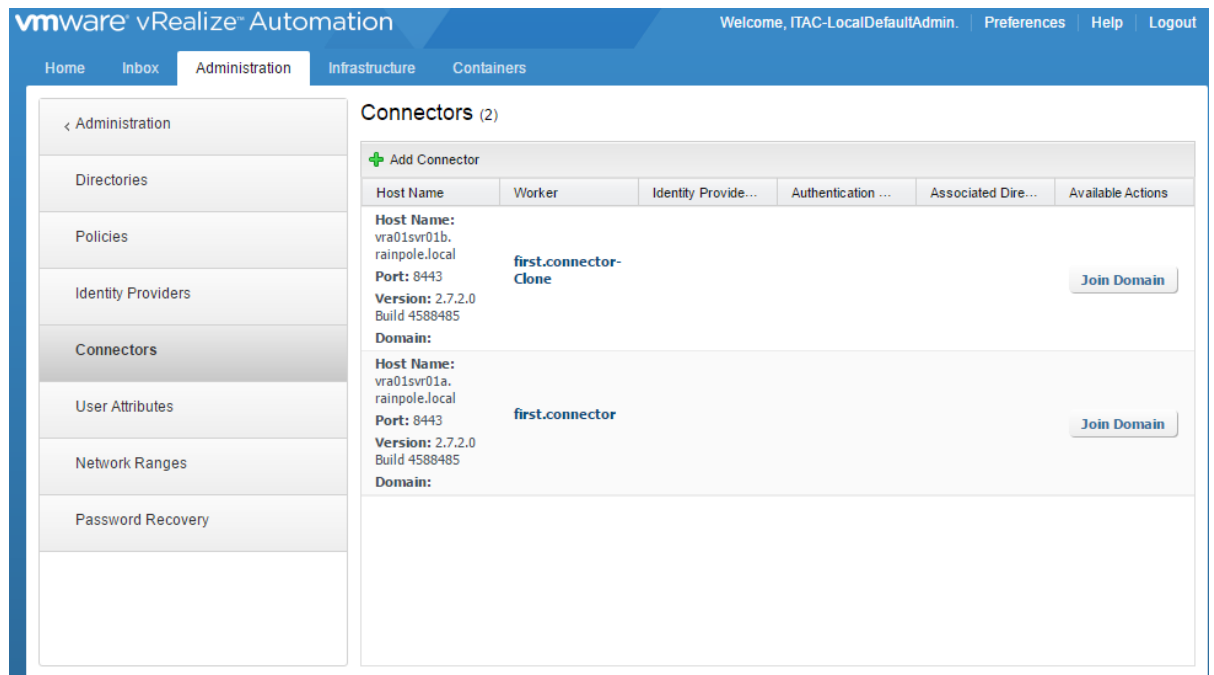

Each vRealize Automation appliance includes a connector that supports user authentication. By default, one connector is typically configured to perform directory synchronization. Perform the procedure by using the ITAC-LocalDefaultAdmin that you configured in the previous procedure.

Procedure

- 1 Log in to the vRealize Automation portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/vsphere.local**.
 - b Log in using the following credentials.

Setting	Value
User name	ITAC-LocalDefaultAdmin
Password	<i>itac-localdefaultadmin_password</i>

- 2 Navigate to **Administration > Directories Management > Connectors**.

- 3 For the **first.connector**, click **Join Domain**, specify the following settings and click **Join Domain**.

Setting	Value
Domain	Custom Domain
	rainpole.local
Domain User	administrator
Domain Password	domain_admin_password

- 4 For the **first-connector-Clone**, click **Join Domain**, specify the following settings and click **Join Domain**.

Setting	Value
Domain	Custom Domain
	rainpole.local
Domain User	administrator
Domain Password	domain_admin_password

- 5 Log out from the vRealize Automation portal.

vRealize Automation Tenant Creation in Region A

You create additional vRealize Automation tenants so that users can access the applications and resources that they need to complete their work assignments.

A tenant is a group of users with specific privileges who work within a software instance. Administrators can create additional tenants so that users can log in and complete their work assignments. Administrators can create as many tenants as needed for system operation. Administrators must specify basic configuration such as name, login URL, local users, and administrators. The tenant administrator must also log in and set up an appropriate Active Directory connection and apply custom branding to tenants.

Create the Rainpole Tenant in Region A

The vRealize Automation Identity Manager provides Single-Sign On (SSO) capability for vRealize Automation users.

vRealize Automation Identity Manager is an authentication broker and security token exchange that interacts with the Active Directory to authenticate users. As the system administrator, you configure Identity Manager to provide access to vRealize Automation by the Rainpole tenant. The Rainpole tenant is the tenant through which you manage system-wide configuration, that includes global system defaults for branding, notifications, and monitor system logs.

Procedure

- 1 Log in to the vRealize Automation portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator
Password	<i>vra_administrator_password</i>

- 2 On the Tenants page, click **New** to configure a new tenant.
- 3 On the **General** tab, enter the following settings for the Rainpole tenant, and click **Submit and Next**.

Setting	Value
Name	Rainpole
URL Name	rainpole
Contact email	administrator@rainpole.local

The screenshot shows the VMware vRealize Automation web interface. The top navigation bar is blue with the VMware logo and 'vRealize Automation' text. On the right of the bar are links: 'Welcome, administrator', 'Preferences', 'Help', and 'Logout'. A left sidebar is titled 'Administration' and contains a list of menu items: 'Tenants' (highlighted), 'Branding', 'Email Servers', 'Event Logs', and 'vRO Configuration' with a right arrow. The main content area is titled 'New Tenant' and has three tabs: 'General' (selected), 'Local users', and 'Administrators'. The 'General' tab contains the following form fields:

- * Name:** A text box containing 'Rainpole'.
- Description:** A large empty text area.
- * URL name:** A text box containing 'rainpole'.
- Contact email:** A text box containing 'administrator@rainpole.local'.

 At the bottom of the form are four buttons: '< Back', 'Submit and Next', 'Finish', and 'Cancel'.

- 4 On the **Local Users** tab, click **New** to add a local user for the tenant.

- 5 In the **User Details** dialog box, specify the following settings, click **OK**, and click **Next**.

Setting	Value
First name	ITAC
Last name	LocalRainpoleAdmin
Email	ITAC-LocalRainpoleAdmin@rainpole.local
User name	ITAC-LocalRainpoleAdmin
Password	<i>itac-localrainpoleadmin_password</i>
Confirm password	<i>itac-localrainpoleadmin_password</i>

User Details:

* First name:

ITAC

* Last name:

LocalRainpoleAdmin

* Email:

ITAC-LocalRainpoleAdmin

* User name:

ITAC-LocalRainpoleAdmin

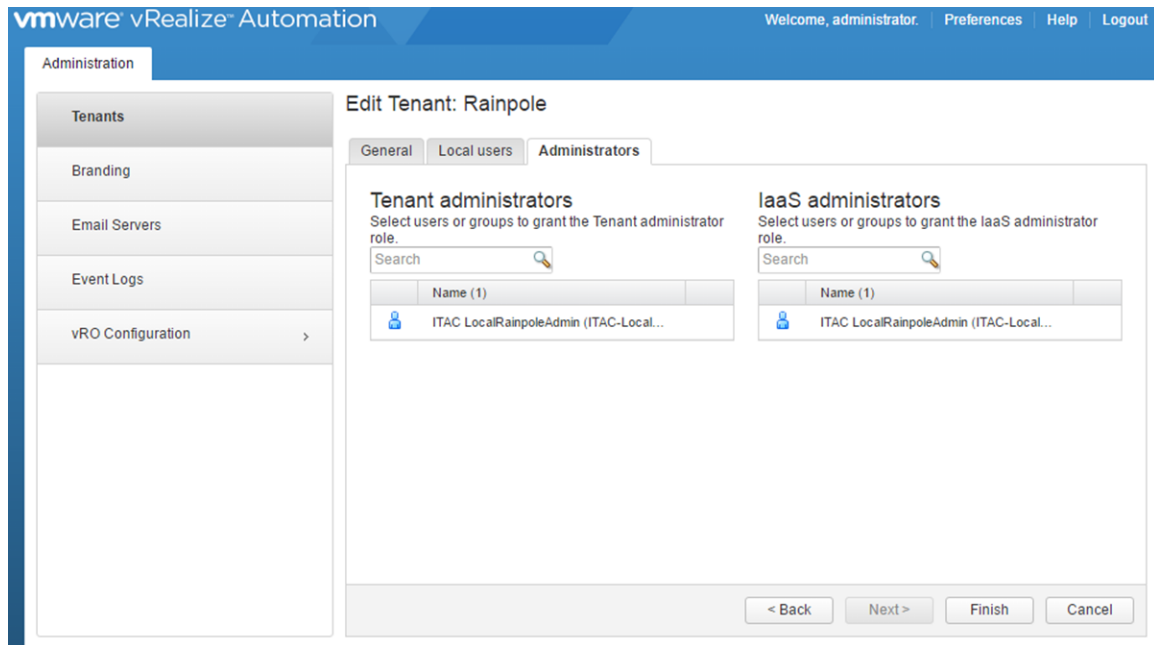

* Password:

* Confirm password:

OK

Cancel

- 6 On the **Administrators** tab, specify tenant and infrastructure administrators.
 - a Enter **ITAC-LocalRainpoleAdmin** in the **Tenant administrators** search text box and press **Enter**.
 - b Enter **ITAC-LocalRainpoleAdmin** in the **IaaS administrators** search text box and press **Enter**.
 - c Click **Finish**.

- 7 Log out of vRealize Automation portal.

Configure Identity Management for the vRealize Automation Tenant in Region A

vRealize Automation uses VMware Identity Manager to authenticate users.

Each tenant has to be associated with at least one directory as part of the tenant creation. You can add more directories if necessary. Perform the procedure by using the ITAC-LocalRainpoleAdmin that you configured.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	ITAC-LocalRainpoleAdmin
Password	<i>itac-localrainpoleadmin_password</i>

- 2 Navigate to **Administration > Directories Management > Directories**.
- 3 Click **Add Directory** and select **Add Active Directory over LDAP/IWA**, specify the following settings and click **Save & Next**.

Setting	Value
Directory Name	rainpole.local
Directory Type	Active Directory (Integrated Windows Authentication)

Setting	Value
Sync Connector	vra01svr01a.rainpole.local
Authentication	Yes
Directory Search Attribute	sAMAccountName
Certificates	Deselected
Domain Name	rainpole.local
Domain Admin Username	domain administrator
Domain Admin Password	<i>domain_admin_password</i>
Bind User UPN	svc-vra@rainpole.local
Bind DN Password	<i>svc-vra_password</i>

Add Directory

* Directory Name: rainpole.local

☐ Active Directory over LDAP
☒ Active Directory (Integrated Windows Authentication)

Directory Sync and Authentication

Select the connector that syncs users from Active Directory to the VMware Identity Manager directory.

Sync Connector: vra01svr01a.rainpole.local

Authentication: Do you want this Connector to also perform authentication?
☒ Yes
☐ No

* Directory Search Attribute: sAMAccountName

Enter the account attribute that contains the user name.

Certificates

If your Active Directory requires STARTTLS encryption, select the check box below and provide the Root CA certificate. If there is more than one Root CA certificate, add all the certificates one after another. Make sure each certificate is in the PEM format with the delimiter lines 'BEGIN CERTIFICATE' and 'END CERTIFICATE'.

☐ This Directory requires all connections to use STARTTLS

Join Domain Details

Enter the name of the Active Directory domain to join and the domain admin user name and password.

* Domain Name: rainpole.local

* Domain Admin Username: administrator

* Domain Admin Password: *****

Bind User Details

Enter the name of the user who can authenticate with the domain. Use the email address format, for example jdoe@mydomain.com.

* Bind User UPN: svc-vra@rainpole.local

* Bind DN Password: *****

Enter your Active Directory bind account password.

Cancel Save & Next

- 4 On the Select the Domains page, select **rainpole.local (RAINPOLE)** and click **Next**.

Select the Domains

If you are adding an Active Directory over LDAP, domains are automatically selected and listed below with a checkmark. If you are adding an Active Directory (Integrated Windows Authentication), select the domains that should be associated with this Active Directory connection.

Domain
<input checked="" type="checkbox"/> rainpole.local (RAINPOLE)
<input type="checkbox"/> lav01.rainpole.local (LAV01)
<input type="checkbox"/> sfo01.rainpole.local (SFO01)

- 5 On the Map User Attributes page, click **Next**.
- 6 On the Select the groups (users) you want to sync page, enter the group DN's to sync.
- Click the **Add** icon to add the distinguished name to the search criteria.
 - In the **Specify the group DN's** text box, enter **dc=rainpole,dc=local** and click **Find Groups**.

- c After the Groups to sync value updates, click **Select**.

Select the groups (users) you want to sync

Enter the Group DN's to sync, for example, CN=users,DC=example,DC=company,DC=com. Select the Active Directory groups that you want to sync to the directory. When you select a group, users of that group are also synced.

☒ Sync nested group members

Specify the group DN's	Select All	Groups to sync	
dc=rainpole,dc=local	<input type="checkbox"/>	0 of 62	Select

dc=rainpole,dc=local	CN=ug-vROAdmins,OU=SDDC-Platform,DC=rainpole,DC=local

- 7 On the **Select the Users you would like to sync** page, enter the user DNs to sync.
 - a Click the **Add** icon to add the distinguished name to the search criteria.
 - b In the **Specify the user DNs** text box, enter **cn=users,dc=rainpole,dc=local**, click the **Add** icon on the same row, and click **Save**.

- 8 On the **Review** page, click **Sync Directory**.

Configure Directories Management for High Availability in Region A

Each vRealize Automation appliance includes a connector that supports user authentication, although only one connector is typically configured to perform directory synchronization.

To support Directories Management high availability, you must configure a second connector that corresponds to your second vRealize Automation appliance. That second connector connects to the same Identity Provider and, through VMware Identity Manager, points to the same Active Directory instance. With this configuration, if one appliance fails, the other can take over management of user authentication.

In a high availability environment, all nodes must serve the same set of users, authentication methods, and other Active Directory constructs. The most direct method to accomplish this is to promote the Identity Provider to the cluster by setting the load balancer host as the Identity Provider host. With this configuration, all authentication requests are directed to the load balancer, which forwards the request to either connector as appropriate.

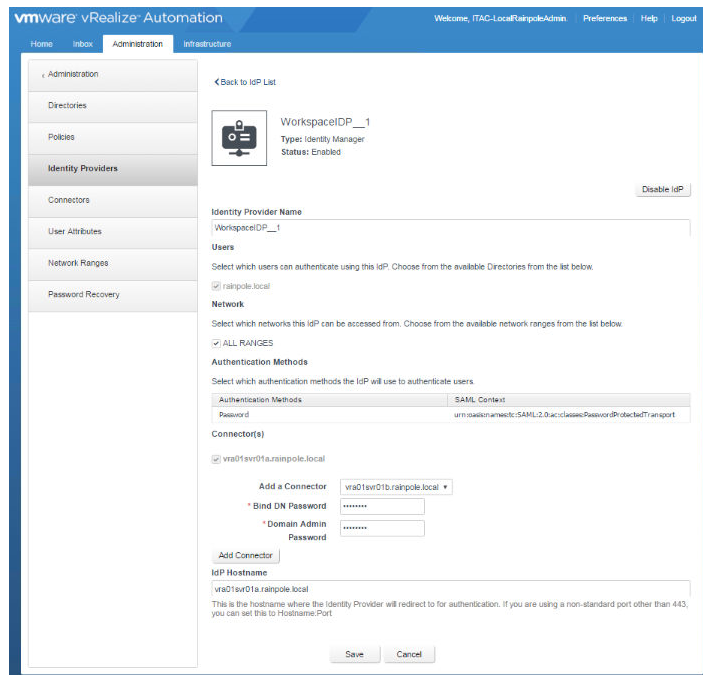

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	ITAC-LocalRainpoleAdmin
Password	<i>itac-localrainpoleadmin_password</i>

- 2 Navigate to **Administration > Directories Management > Identity Providers**.
- 3 Click **WorkspaceIDP_1** to edit its settings.
- 4 Under **Connector(s)**, specify the following settings and click **Add Connector**.

Setting	Value
Add a Connector	vra01svr01b.rainpole.local
Bind DN Password	<i>svc-vra_password</i>
Domain Admin Password	<i>domain_admin_password</i>

- 5 In the **Idp Hostname** text box, enter **vra01svr01.rainpole.local**, the host name of the load balancer, and click **Save**.

Assign Tenant Administrative Roles to Active Directory Users in Region A

After vRealize Automation Directories Management is associated with your Active Directory domain, domain users can administer the tenant. Assign domain user groups for tenant and infrastructure administrators.

Procedure

- 1 Log in to the vRealize Automation portal.
 - a Open a Web browser and go to **<https://vra01svr01.rainpole.local/vcac>**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator
Password	<i>vra_administrator_password</i>

- 2 On the Tenants page, click the Rainpole tenant to edit its settings.

- 3 Click the **Administrators** tab to assign domain user groups for tenant and infrastructure administrators.
 - a Enter **ug-ITAC-TenantAdmins** in the Tenant administrators search text box and press **Enter**.
 - b Enter **ug-ITAC-TenantAdmins** in the IaaS administrators search text box and press **Enter**.
 - c Click **Finish**.

Edit Tenant: Rainpole

Brand the Tenant Login Pages in Region A

You can apply custom branding on a per-customer basis to the vRealize Automation tenant login pages.

System administrators control the default branding for all tenants. As a tenant administrator, you change the branding of the portal. That includes the logo, the background color, and the information in the header and footer. If the branding for a tenant is changed, a tenant administrator can revert back to the system defaults.

Procedure

- 1 Log in to the vRealize Automation portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator
Password	<i>vra_administrator_password</i>

- 2 Navigate to **Administration > Branding** and deselect the **Use default** check box.
- 3 On the **Header** tab specify the following settings for the header branding.

Setting	Value
Company Name	Rainpole
Product Name	Infrastructure Service Portal
Background hex color	3989C7
Text hex color	FFFFFF

- 4 Click the **Footer** tab, specify the following settings for the footer branding and click **Finish**.

Setting	Value

Configure the Default Email Servers in Region A

System administrators configure inbound and outbound email servers to handle email notifications about events involving tenants' machines. System administrators can create only one inbound email server and one outbound email server. These servers are the defaults for all tenants.

If tenant administrators do not override the default email server settings before they enable notifications, vRealize Automation uses the globally configured email server.

Procedure

- 1 Log in to the vRealize Automation portal.
 - a Open a Web browser and go to **`https://vra01svr01.rainpole.local/vcac`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator
Password	<i>vra_administrator_password</i>

- 2 Navigate to **Administration > Email Servers** and click **New**.
- 3 In the **New Email Server** dialog box, select **Email - Inbound** and click **OK**.
- 4 On the **New Inbound Email** page, specify the following values, click **Test Connection** to verify that the settings are correct, and click **OK**.

Setting	Value
Name	Rainpole-Inbound
Security	Deselected
Protocol	IMAP
Server Name	email.rainpole.local

Embedded vRealize Orchestrator Configuration in Region A

VMware Embedded vRealize Orchestrator is a platform that provides a library of extensible workflows to allow you to create and run automated, configurable processes to manage the VMware vSphere infrastructure as well as other VMware and third-party technologies.

vRealize Orchestrator is composed of three distinct layers: an orchestration platform that provides the common features required for an orchestration tool, a plug-in architecture to integrate control of subsystems, and a library of workflows. vRealize Orchestrator is an open platform that can be extended with new plug-ins and libraries, and can be integrated into larger architectures through a REST API.

Configure the Embedded vRealize Orchestrator in Region A

Configure the vRealize Orchestrator services to provide the SDDC foundation orchestration engine.

Configure the Embedded vRealize Orchestrator in Region A

You need to configure two vRealize Automation virtual appliances to create a highly available Embedded vRealize Orchestrator cluster.

Perform this procedure twice to configure two appliances using the respective values in the following table for the different hosts.

vRealize Orchestrator Appliance	IP Address	FQDN
Host A	192.168.11.51	vra01svr01a.rainpole.local
Host B	192.168.11.52	vra01svr01b.rainpole.local

Procedure

- 1 Log in to the vRealize Automation Appliance vra01svr01a.rainpole.local to configure the embedded vRealize Orchestrator.
 - a SSH to vRealize Automation Appliance vra01svr01a.rainpole.local using the following credentials.

Setting	Value
User name	root
Password	hostA_root_password

- b Start vco-configurator service using the command `service vco-configurator start`.

```
vra01svr01a.rainpole.local - PuTTY
vra01svr01a:~ # service vco-configurator start
Starting tcServer
Using CATALINA_BASE:   /var/lib/vco/configuration
Using CATALINA_HOME:   /opt/pivotal/pivotal-tc-server-standard/tomcat-8.5.4.B.RELEASE
Using CATALINA_TMPDIR: /var/lib/vco/configuration/temp
Using JRE_HOME:        /usr/java/jre-vmware
Using CLASSPATH:       /opt/pivotal/pivotal-tc-server-standard/tomcat-8.5.4.B.RELEASE/bin/bootstrap.jar:/opt/pivotal/pivotal-tc-server-standard/tomcat-8.5.4.B.RELEASE/bin/tomcat-juli.jar
Using CATALINA_PID:    /var/lib/vco/configuration/logs/tcserver.pid
Tomcat started.
Status:                RUNNING as PID=3742
vra01svr01a:~ #
```

- c Verify the status of `vco-configurator` using the command `service vco-configurator status`.

```
vra01svr01a:~ # service vco-configurator status
Status-ing toServer
Instance name:      configuration
Runtime version:    8.5.4.B.RELEASE
tc Runtime Base:    /var/lib/vco/configuration
Status:             RUNNING as PID=3742
vra01svr01a:~ #
```

- d Run the command `chkconfig vco-configurator on` to enable automatic restart of `vco-configurator` service upon subsequent reboots of the vRealize Automation appliance.
- 2 Repeat the procedure to configure the vRealize Orchestrator for Host B `vra01svr01b.rainpole.local`.

Configure Authentication Provider for vRealize Orchestrator in Region A

Configure vRealize Orchestrator to utilize the vRealize Automation customer tenant (`rainpole`) for authentication.

Procedure

- 1 Log in to the vRealize Orchestrator Control Center.
 - a Open a Web browser and go to **`https://vra01svr01.rainpole.local:8283/vco-controlcenter`**.
 - b Log in using the following credentials.

Setting	Value
Domain	<code>vsphere.local</code>
User name	<code>administrator</code>
Password	<code>vsphere_admin_password</code>

- 2 Configure vRealize Automation as a vRealize Orchestrator authentication provider.
 - a On the Home page, under Manage, click **Configure Authentication Provider**.
 - b In the **Default Tenant** text box, click the **Change** button, enter **rainpole**, and click **Apply**.
 - c In the **Admin group** text box, enter **ug-vR0** and click **Search**.
 - d From the drop-down menu, select **rainpole.local\ug-vROAdmins** and click **Save Changes**.

- e At this point, you will be automatically logged out of the control center.

- 3 Verify that you can successfully log in as **svc-vra**.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local:8283/vco-controlcenter**.
 - b Log in using the following credentials.

Setting	Value
Domain	rainpole.local
User name	svc-vra
Password	<i>svc-vra_password</i>

- 4 Log out of control center.
- 5 SSH into both vRealize Automation appliances and run the following commands to restart the vRealize Orchestrator services.
 - a `service vco-server restart`
 - b `service vco-configurator restart`
- 6 Log back in to control center as **svc-vra**.

NOTE The log in process may be delayed due to the vRealize Orchestrator services restarting.

- a Open a Web browser and go to **https://vra01svr01.rainpole.local:8283/vco-controlcenter**.
- b Log in using the following credentials.

Setting	Value
Domain	rainpole.local
User name	svc-vra
Password	<i>svc-vra_password</i>

Validate the Configuration of vRealize Orchestrator in Region A

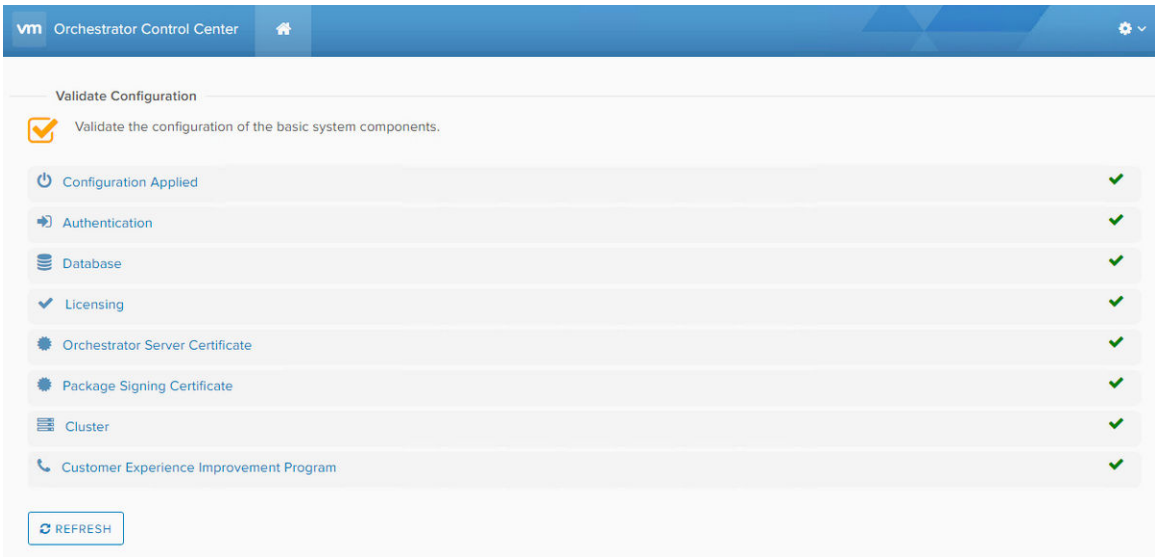

You can verify that Embedded vRealize Orchestrator is configured properly by opening the Validate Configuration page in the Control Center.

Procedure

- 1 Log in to the Embedded vRealize Orchestrator Control Center.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local:8283/vco-controlcenter**.
 - b Log in using the following credentials.

Setting	Value
Domain	rainpole.local
User name	svc-vra
Password	<i>svc-vra_password</i>

- 2 On the Home page, under Manage, click **Validate Configuration** and verify that all check marks are green.

Add Compute vCenter Server Instance to Embedded vRealize Orchestrator in Region A

Add each vCenter Server instance that contributes resources to vRealize Automation and uses vRealize Orchestrator workflows to allow communication.

Procedure

- 1 Download and Install the vRealize Orchestrator Client.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local**.
 - b Click **vRealize Orchestrator Client**.
 - c On the VMware vRealize Orchestrator Login page, log in to the Embedded vRealize Orchestrator by using the following hostname and credentials.

Setting	Value
Host name	vra01svr01.rainpole.local:443
User name	svc-vra
Password	svc-vra_password

- 2 In the left pane, click **Workflows**, and navigate to **Library > vCenter > Configuration**.

- 3 Right-click the **Add a vCenter Server instance** workflow and click **Start Workflow**.
 - a On the Set the vCenter Server Instance page, configure the following settings and click **Next**.

Setting	Value
IP or hostname of the vCenter Server instance to add	sfo01w01vc01.sfo01.rainpole.local
HTTPS port of the vCenter Server instance	443
Location of SDK that you use to connect	/sdk
Will you orchestrate this instance	Yes
Do you want to ignore certificate warnings	Yes

- b On the Set the connection properties page, configure the following settings, and click **Submit**.

Setting	Value
Use a session per user	No
vCenter Server user name	rainpole.local\svc-vro
vCenter Server user password	<i>svc-vro_password</i>

- 4 To verify that the workflow completed successfully, click the **Inventory** tab and expand the **vSphere vCenter Plugin** tree control.

The vCenter Server instance you added will be visible in the inventory.

Integrate vRealize Orchestrator with vRealize Automation in Region A

Configure vRealize Automation to work with the external vRealize Orchestrator instance.

Configure Embedded vRealize Orchestrator Server in Region A

To use vRealize Automation workflows to call vRealize Orchestrator workflows, you must configure vRealize Orchestrator to act as an endpoint.

Procedure

- 1 Log in to the vRealize Automation portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac**.
 - b Log in using the following credentials.

Setting	Value
Domain	vsphere.local
User name	administrator
Password	<i>vra_administrator_password</i>

- 2 Click **Administration > vRO Configuration > Server Configuration**.
- 3 Select the **Use the default Orchestrator server** radio button and click **Test Connection**.
- 4 Once the Successfully connected to the Orchestrator server message appears, click **OK** to complete the configuration.

Create a vRealize Orchestrator Endpoint in Region A

IaaS administrators are responsible for creating the endpoints that allow vRealize Automation to communicate with your infrastructure. You create a vRealize Orchestrator endpoint for use by Realize Automation to communicate workflows.

Procedure

- 1 Log in to the Rainpole Infrastructure Service Portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b From the **Select your domain** drop-down menu select **Rainpole.local** and click **Next**
 - c Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	itac-tenantadmin_password
Domain	rainpole.local

- 2 Create a new endpoint for vRealize Orchestrator.
 - a Select **Infrastructure > Endpoints > Endpoints**.
 - b Click **New > Orchestration > vRealize Orchestrator**, enter the following values, and click **OK** to complete the process.

Setting	Value
Name	vra01svr01.rainpole.local
Address	https://vra01svr01.rainpole.local/vco
User name	svc-vra@rainpole.local
Password	svc-vra_password
Priority	1

- 3 Start the data collection for the newly created endpoint.
 - a Select the vRealize Orchestrator endpoint in the Endpoints list and click **Actions > Data Collection**.
 - b Click **Start** to begin the vRealize Orchestrator data collection process. Wait several minutes for the data collection process to complete.
 - c Click **Refresh** to verify that the data collection successfully complete.

When a data collection succeeded status message appears, the configuration process is complete.

Add vRealize Automation Host in vRealize Orchestrator in Region A

To call vRealize Automation Plugin workflows, you configure the vRealize Automation host in vRealize Orchestrator.

Procedure

- 1 Log in to the vRealize Orchestrator Client.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vco**.
 - b Click **Start Orchestrator Client**.
 - c On the VMware vRealize Orchestrator login page, log in to vRealize Orchestrator using the following hostname and credentials.

Setting	Value
Host name	vra01svr01.rainpole.local:443
User name	svc-vra
Password	svc-vra_password

- 2 In the left pane, click **Workflows**, and navigate to **Library > vRealize Automation > Configuration**.
- 3 Right-click the **Add a vRA host using component registry** workflow and click **Start Workflow**.
 - a On the Common parameters page, configure the following settings, and click **Submit**.

Setting	Value
Name of the vCAC host	vra01svr01.rainpole.local
Connection timeout	30.0
Operation timeout	60.0
Maximum page size for objects retrieved from this host	100.0

- 4 To verify that the workflow completed successfully, click the **Inventory** tab and expand the **vRealize Automation** tree control.

The vRealize Automation Server instance that you just added is visible in the inventory.
- 5 In the left pane, click **Workflows**, and navigate to **Library > vRealize Automation > Configuration**.

- 6 Right-click the **Add the IaaS host of a vRA host** workflow and click **Start Workflow**.
 - a On the Common parameters page, click the search icon labelled **Not set**. Select **vra01svr01.rainpole.local** [<https://vra01svr01.rainpole.local>] [**rainpole**] for vCAC host and click **Next**.
 - b On the Add an IaaS host page, keep the default settings for Host Properties and click **Next**.

Start Workflow : Add the IaaS host of a vRA host

- ✓ 1 Common parameters
- 2 Add an IaaS host
 - 2a Host Properties
 - 2b Proxy settings
- 3 Host Authentication
 - 3a User Credentials
 - 3b Domain and Workstation

* Host Name
IaaS host for vra01svr01.rainpole.local

* Host URL
<https://vra01iws01.rainpole.local>

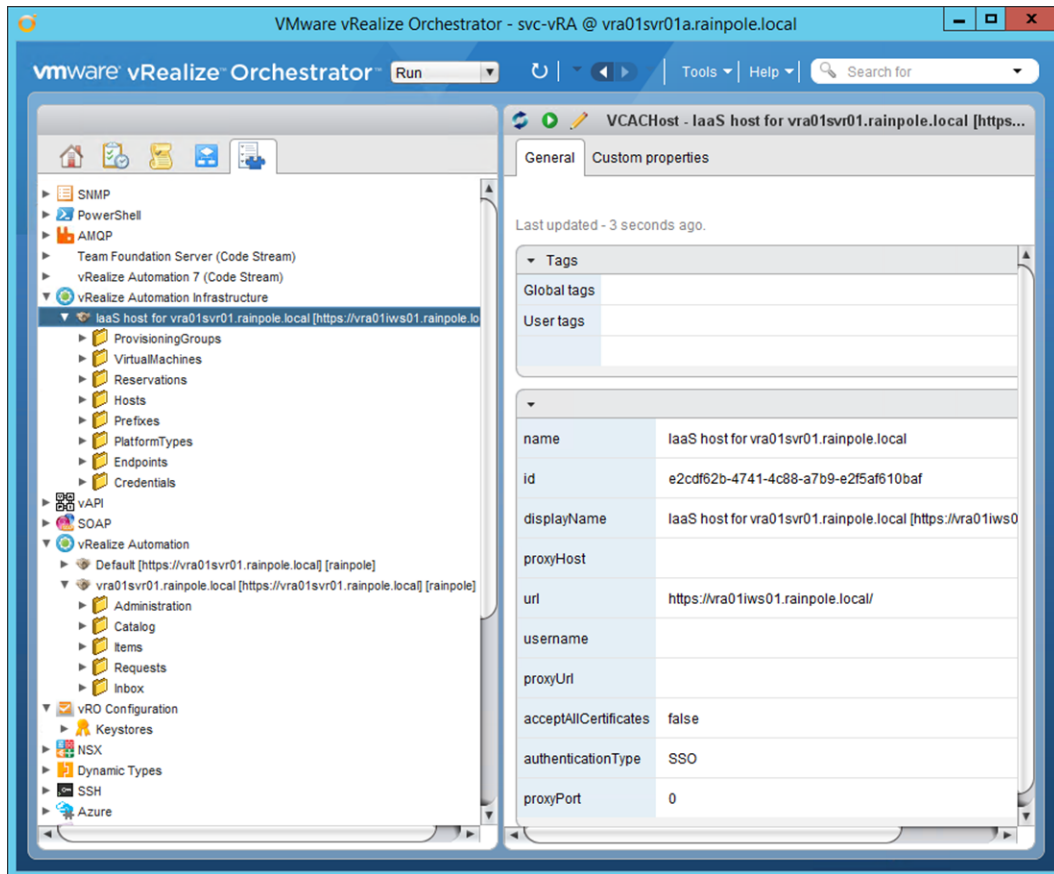

* Connection timeout
30

* Operation timeout
60

Cancel Back Next Submit

- c On the Add an IaaS host page, keep the default settings for the Proxy Settings and click **Next**.
 - d On the Host Authentication page, select **SSO** for Host's authentication type, and click **Submit**.
- 7 To verify that the workflow completed successfully, click the **Inventory** tab and expand the **vRealize Automation Infrastructure** tree control.

The vRealize Automation IaaS Server instance you added is visible in the inventory.

vRealize Business Installation in Region A

vRealize Business is an IT financial management tool that provides transparency and control over the costs and quality of IT services, enabling alignment with the business and acceleration of IT transformation.

Install vRealize Business and integrate it with vRealize Automation to continuously monitor the cost of each individual Virtual Machine and the cost of their data center.

Deploy the vRealize Business for Cloud Virtual Appliances in Region A

VMware vRealize Business provides capabilities that allow users to gain greater visibility into financial aspects of their cloud infrastructure and let them optimize and improve these operations.

You deploy two instances of vRealize Business, a Server and a Data Collector. Repeat this procedure twice to deploy the two appliances.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **<https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client>**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Click **Hosts and Clusters** and navigate to the **sfo01m01vc01.sfo01.rainpole.local** vCenter Server object.
- 3 Right-click the **sfo01m01vc01.sfo01.rainpole.local** object and select **Deploy OVF Template**.
- 4 On the Select template page, select **Local file**, browse to the location of the vRealize Business virtual appliance .ova file on your file system, and click **Next**.
- 5 On the Select name and location page, enter the following information for the respective appliance that you deploy and click **Next**.

Setting	Value for Server	Value for Data Collector
Name	vrbc01.sfo01.rainpole.local	sfo01vrbc01.sfo01.rainpole.local
Select a datacenter or folder	sfo01-m01fd-vra	sfo01-m01fd-vraias

- 6 On the Select a resource page, select the **sfo01-m01-mgmt01** cluster and click **Next**.
- 7 On the Review details page, examine the virtual appliance details, such as product, version, download and disk size, and click **Next**.
- 8 On the Accept license agreements page, accept the end user license agreements and click **Next**.
- 9 On the Select storage page, select the datastore.
 - a Select **Thin provision** from the **Select virtual disk format** drop-down menu.
 - b Select **vSAN Default Storage Policy** from the **VM storage policy** drop-down menu.
 - c From the datastore table, select the **sfo01-m01-vsan01** datastore and click **Next**.
- 10 On the Select networks page, select the appropriate network from the **Destination** drop-down menu, and click **Next**.

Setting	Value for Server	Value for Data Collector
Network 1	Ends with Mgmt-xRegion01-VXLAN	Ends with Mgmt-RegionA01-VXLAN

- 11 On the Customize template page, configure the following values and click **Next**.

Setting	Values for Server	Values for Data Collector
Currency	USD	USD
Enable SSH service	Selected	Selected
Enable Server	Selected	Deselected
Join the VMware Customer Experience Improvement Program	Selected	Selected
Root user password	<i>vrbc_server_root_password</i>	<i>vrbc_collector_root_password</i>
Default Gateway	192.168.11.1	192.168.31.1
Domain Name	vrbc01.sfo01.rainpole.local	sfo01vrbc01.sfo01.rainpole.local
Domain Name Servers	172.16.11.4,172.17.11.4	172.16.11.5,172.16.11.4
Domain Search Path	rainpole.local,sfo01.rainpole.local,lax01.rainpole.local	sfo01.rainpole.local
Network 1 IP Address	192.168.11.66	192.168.31.54
Network 1 Netmask	255.255.255.0	255.255.255.0

- 12 On the Ready to complete page, review the configuration settings you specified and click **Finish**.

- 13 Adjust the vRealize Business virtual appliance memory size.
 - a Right-click the virtual machine and select **Edit Settings**. Click **Virtual Hardware**, enter the following value for **Memory**, and click **OK**.

Setting	Value for Server	Value for Data Collector
vRealize Business virtual appliance	vr01svr01.rainpole.local	sf001vrbc01.sfo01.rainpole.local
Memory	8GB (Default)	2GB

- 14 Navigate to the new appliance and power on the VM.
- 15 Repeat this procedure to deploy the vRealize Business Data Collector sfo01vrbc01.sfo01.rainpole.local.

Configure SSL Certificate for vRealize Business Server in Region A

Import the previously generated certificates for vRealize Business from the vRealize Business appliance management console.

Prerequisites

- CA-signed certificate files generated by using VMware Validated Design Certificate Generation Utility (CertGenVVD). See the *VMware Validated Design Planning and Preparation* documentation.

Procedure

- 1 Log in to the vRealize Business Server appliance management console.
 - a Open a Web browser and go to **https://vr01svr01.rainpole.local:5480**.
 - b Log in using the following credentials.

Setting	Value
User name	root
Password	vr01_server_root_password

- 2 Click the **Administration** tab and click **SSL**.
- 3 On the Replace SSL Certificate page, upload the certificate files that you previously generated for vRealize Business and click **Replace Certificate**.

Use the `vr01.key` file as the **RSA Private Key (.key)** and the `vr01.3.pem` file for the **Certificate(s) (.pem)** entry. These files are in the `vr01` folder that you created during certificate generation.

Setting	Value
Choose mode	Import PEM encoded Certificate
RSA Private Key (.key)	-----BEGIN RSA PRIVATE KEY----- <i>private_key_value</i> -----END RSA PRIVATE KEY-----
Certificate(s) (.pem)	-----BEGIN CERTIFICATE----- <i>Server_certificate_value</i> -----END CERTIFICATE----- -----BEGIN CERTIFICATE----- <i>Intermediate_CA</i> -----END CERTIFICATE----- -----BEGIN CERTIFICATE----- <i>Root_CA_certificate_value</i> -----END CERTIFICATE-----
Private Key Passphrase	<i>vr01_cert_passphrase</i>

- 4 Verify that the certificate has changed successfully.
A message appears that informs you that the SSL certificate was successfully configured.
- 5 Click the **System** tab and click **Reboot** for the changes to take effect.

Configure NTP for vRealize Business in Region A

Configure the network time protocol (NTP) on both vRealize business appliances from the virtual appliance management interface (VAMI).

Perform the procedure on both vRealize Business Server and vRealize Business Data Collector virtual appliances.

Host	VAMI URL
Server	https://vrb01svr01.rainpole.local:5480
Data Collector	https://sfo01vrbc01.sfo01.rainpole.local:5480

Procedure

- 1 Log in to the vRealize Business Server appliance management console.
 - a Open a Web browser and go to **`https://vrb01svr01.rainpole.local:5480`**.
 - b Log in using the following credentials.

Setting	Value
User name	root
Password	<i>vrb_server_root_password</i>
- 2 Configure the appliance to use a time server.
 - a Click the **Administration** tab and click **Time Settings**.
 - b On the Time Settings page, enter the following settings and click **Save Settings**.

Setting	Value
Time Sync. Mode	Use Time Server
Time Server #1	ntp.sfo01.rainpole.local
Time Server #2	ntp.lax01.rainpole.local
- 3 Repeat the procedure on the vRealize Business Data Collector virtual appliance `sfo01vrbc01.sfo01.rainpole.local`.

Integrate vRealize Business with vRealize Automation in Region A

To prepare vRealize Business for use, you must register the vRealize Business Server to vRealize Automation by using the management interface.

Procedure

- 1 Log in to the vRealize Business Server appliance management console.
 - a Open a Web browser and go to **https://vrb01svr01.rainpole.local:5480**.
 - b Log in using the following credentials.

Setting	Value
User name	root
Password	<i>vrb_server_root_password</i>

- 2 On the **Registration > vRA** subtab, enter the following credentials to register with the vRealize Automation server.

Setting	Value
Hostname	vra01svr01.rainpole.local
SSO Default Tenant	vsphere.local
SSO Admin User	administrator
SSO Admin Password	<i>vra_administrator_password</i>
Accept "vRealize Automation" certificate	Selected

- 3 Click **Register** to connect to vRealize Automation and get its certificate.
A failure message may appear at the top of the page. Wait until the SSO Status changes to The certificate of "vRealize Automation" is not trusted. Please view and accept to register.
- 4 Click the **View "vRealize Automation" certificate** link to download the vRealize Automation certificate.
- 5 Select the **Accept "vRealize Automation" certificate** check box and click **Register**.
SSO Status changes to Connected to vRealize Automation.

Register the vRealize Business Data Collector with the Server in Region A

After you integrate vRealize Business with vRealize Automation, you connect the two vRealize Business appliances.

Because the tenant is configured in vRealize Automation, you register the vRealize Business Data Collector appliance with the vRealize Business Server using the following procedure.

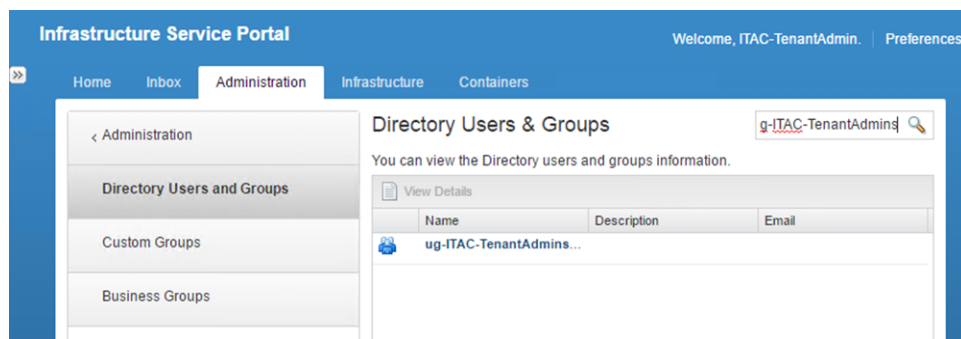

- Grant an added role to the tenant admin, enter product license key, and generate a one-time key from vRealize Automation.
- Register the Data Collector to the vRealize Business Server.

Procedure

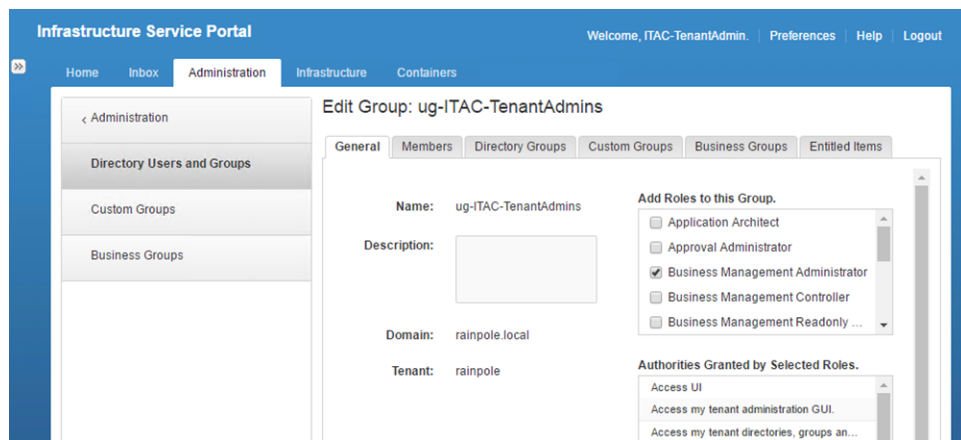

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	Rainpole.local

- 2 Navigate to **Administration > Users & Groups > Directory Users and Groups**.
- 3 In the search text box, enter **ug-ITAC-TenantAdmins**.

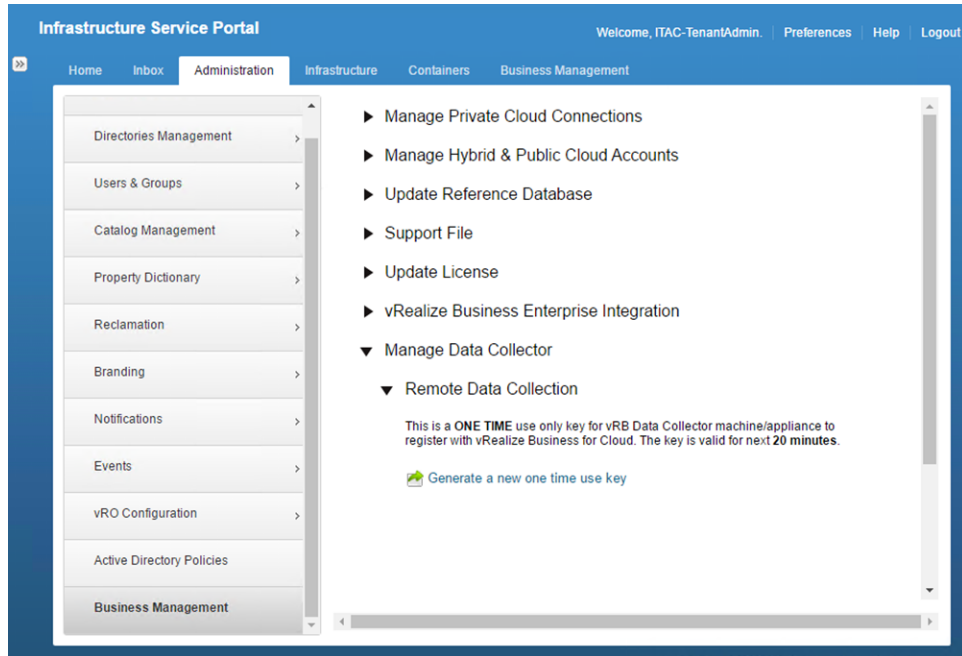

- 4 Click the **ug-ITAC-TenantAdmins** group to edit its settings.
- 5 On the Edit Group page, in the Add Roles to this Group list, select the **Business Management Administrator** role to add the role and click **Finish**.

- 6 Close your browser, and log in again by using the same credentials.
- 7 Assign a license to the vRealize Business solution.
 - a Click the **Business Management** tab.
 - b Under License, enter your serial number for vRealize Business and click **Save**.

- 8 Generate a one-time use key for connecting the two vRealize Business appliances.
 - a Navigate to **Administration > Business Management**.
 - b Expand the **Manage Data Collector > Remote Data Collection** section.
 - c Click **Generate a new one time use key**.
 - d Save the one time use key as you need it at a later stage in the implementation sequence.

- 9 Log in to the vRealize Business Data Collector console.
 - a Open a Web browser and go to **https://sfo01vrbc01.sfo01.rainpole.local:9443/dc-ui**.
 - b Log in using the following credentials.

Setting	Value
User name	root
Password	<i>vrbc_collector_root_password</i>

- 10 Register the Data Collector with the vRealize Business Server.
 - a Expand the **Registration with the vRealize Business Server** section.
 - b Enter the following values and click **Register**.

Setting	Value
Enter the vRB Server Url	https://vrbc01svr01.rainpole.local
Enter the One Time Key	<i>one_time_use_key</i>

After you click **Register**, a warning message informs you that the certificate is not trusted.

- c Click **Install** and click **OK**.
The vRealize Business appliances are now connected.

Connect vRealize Business with the Compute vCenter Server in Region A

vRealize Business requires communication with the Compute vCenter Server to collect data from the entire cluster. You perform this operation by using the vRealize Business Data Collector console.

Procedure

- 1 Log in to the vRealize Business Data Collector console.
 - a Open a Web browser and go to **https://sfo01vrbc01.sfo01.rainpole.local:9443/dc-ui**.
 - b Log in using the following credentials.

Setting	Value
User name	root
Password	<i>vrbc_collector_root_password</i>

- 2 Click **Manage Private Cloud Connections**, select **vCenter Server**, and click the **Add** icon.
- 3 In the Add vCenter Server Connection dialog box, enter the following settings and click **Save**.

Setting	Value
Name	sfo01w01vc01.sfo01.rainpole.local
vCenter Server	sfo01w01vc01.sfo01.rainpole.local
Username	svc-vra@rainpole.local
Password	<i>svc_vra_password</i>

- 4 In the SSL Certificate warning dialog box, click **Install**.
- 5 In the Success dialog box, click **OK**.

Cloud Management Platform Post-Installation Tasks in Region A

After you deploy vRealize Automation and vRealize Orchestrator, you create anti-affinity rules to enable HA protection for both services, enable health monitors to check the health status of individual servers, and remove the snapshots created during the vRealize Automation installation.

Create Anti-Affinity Rules for vRealize Automation and vRealize Orchestrator Virtual Machines in Region A

A VM-Host anti-affinity (or affinity) rule specifies a relationship between a group of virtual machines and a group of hosts. Anti-affinity rules force specified virtual machines to remain apart during failover actions, and are a requirement for high availability.

Table 3-4. Anti-affinity Rules for the Cloud Management Platform

Name	Type	Members
anti-affinity-rule-vra-svr	Separate Virtual Machines	vra01svr01a.rainpole.local, vra01svr01b.rainpole.local
anti-affinity-rule-vra-iws	Separate Virtual Machines	vra01iws01a.rainpole.local, vra01iws01b.rainpole.local
anti-affinity-rule-vra-ims	Separate Virtual Machines	vra01ims01a.rainpole.local, vra01ims01b.rainpole.local
anti-affinity-rule-vra-dem	Separate Virtual Machines	vra01dem01a.rainpole.local, vra01dem01b.rainpole.local
anti-affinity-rule-vra-ias	Separate Virtual Machines	sfo01ias01a.sfo01.rainpole.local, sfo01ias01b.sfo01.rainpole.local

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the Home page, click **Hosts and Clusters**.
- 3 Under **sfo01m01vc01.sfo01.rainpole.local**, click **sfo01-m01dc**, and click **sfo01-m01-mgmt01**.
- 4 Click the **Configure** tab, and under Configuration, select **VM/Host Rules**.
- 5 Under **VM/Host Rules**, click **Add** to create a virtual machine anti-affinity rule.
- 6 In the **Create VM/Host Rule** dialog box, specify the first rule for the vRealize Automation virtual appliances.
 - a In the **Name** text box, enter **anti-affinity-rule-vra-svr**.
 - b Select the **Enable rule** check box.
 - c Select **Separate Virtual Machines** from the **Type** drop-down menu.
 - d Click **Add**, select the **vra01svr01a.rainpole.local** and **vra01svr01b.rainpole.local** virtual machines, click **OK**, and click **OK**.
- 7 Repeat the procedure to configure the remaining anti-affinity rules.

Create VM Groups to Define the Startup Order of the Cloud Management Platform in Region A

VM Groups allow you to define the startup order of virtual machines. The startup order you define ensures that vSphere HA powers on virtual machines in the correct order.

Procedure

- 1 Log in to the Management vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, select **Host and Clusters** and expand the **sfo01m01vc01.sfo01.rainpole.local** tree.
- 3 Create a VM Group for the vRealize Automation IaaS Database.
 - a Select the **sfo01-m01-mgmt01** cluster and click the **Configure** tab.
 - b On the Configure page, click **VM/Host Groups**.
 - c On the VM/Host Groups page, click the **Add** button.
 - d In the Create VM/Host Group dialog, enter **vRealize Automation IaaS Database** in the **Name** field, select **VM Group** from the **Type** drop down, and click the **Add** button.

- e In the Add VM/Host Group Member dialog, select **vra01mssql01.rainpole.local** and click **OK**.
- f Click **OK** to save the VM/Host Group.
- 4 Repeat step 3 to create the following VM/Host Groups.
- | VM/Host Group Name | VM/Host Group Member |
|--|--|
| vRealize Automation Virtual Appliances | vra01svr01a.rainpole.local
vra01svr01b.rainpole.local |
| vRealize Automation IaaS Web Servers | vra01iws01a.rainpole.local
vra01iws01b.rainpole.local |
| vRealize Automation IaaS Managers | vra01ims01a.rainpole.local
vra01ims01b.rainpole.local |
| vRealize Automation IaaS DEM Workers | vra01dem01a.rainpole.local
vra01dem01b.rainpole.local |
| vRealize Automation IaaS Proxy Agents | sfo01ias01a.sfo01.rainpole.local
sfo01ias01b.sfo01.rainpole.local |
| vRealize Business Servers | vr01svr01.rainpole.local |
| vRealize Business Remote Collectors | sfo01vrbc01.sfo01.rainpole.local |
- 5 Create a rule to power on the vRealize Automation Database before the vRealize Automation Virtual Appliances.
- a Select the **sfo01-m01-mgmt01** cluster and click the **Configure** tab.
- b On the Configure page, click **VM/Host Rules**.
- c On the VM/Host Rules page, click the **Add** button.
- d In the Create VM/Host Rule dialog, enter **SDDC Cloud Management Platform 01** in the **Name** field, ensure that the **Enable Rule** check box is selected, select **Virtual Machines to Virtual Machines** from the **Type** drop down.
- e Select **vRealize Automation IaaS Database** for the **First restart VMs in VM group** drop down list.
- f Select **vRealize Automation Virtual Appliances** for the **Then restart VMs in VM group** drop down list
- g Click **OK** to save the rule.
- 6 Repeat step 5 to create the following VM/Host Rules to ensure the correct restart order for your Cloud Management Platform.

VM/Host Rule Name	First restart VMs in VM group	Then restart VMs in VM group
SDDC Cloud Management Platform 02	vRealize Automation Virtual Appliances	vRealize Automation IaaS Web Servers
SDDC Cloud Management Platform 03	vRealize Automation IaaS Web Servers	vRealize Automation IaaS Managers
SDDC Cloud Management Platform 04	vRealize Automation IaaS Managers	vRealize Automation IaaS DEM Workers
SDDC Cloud Management Platform 05	vRealize Automation IaaS Managers	vRealize Automation IaaS Proxy Agents
SDDC Cloud Management Platform 06	vRealize Automation IaaS Managers	vRealize Business Servers
SDDC Cloud Management Platform 07	vRealize Business Servers	vRealize Business Remote Collectors

Enable Load Balancer Health Monitoring in Region A

Previously you disabled health monitoring for the sfo01m01lb01 load balancer to complete configuration of vRealize Automation. You may now re-enable health monitoring for the sfo01m01lb01 load balancer.

Perform this procedure multiple times to configure the health monitor and to enable the second member for the server pools as described in the following table.

Pool Name	Monitor	Enable Pool Member
vra-svr-443	vra-svr-443-monitor	vra01svr01b
vra-iws-443	vra-iws-443-monitor	vra01iws01b
vra-ims-443	vra-ims-443-monitor	vra01ims01b
vra-svr-8444	vra-svr-443-monitor	-
vra-vro-8283	vra-vro-8283-monitor	vra01svr01b

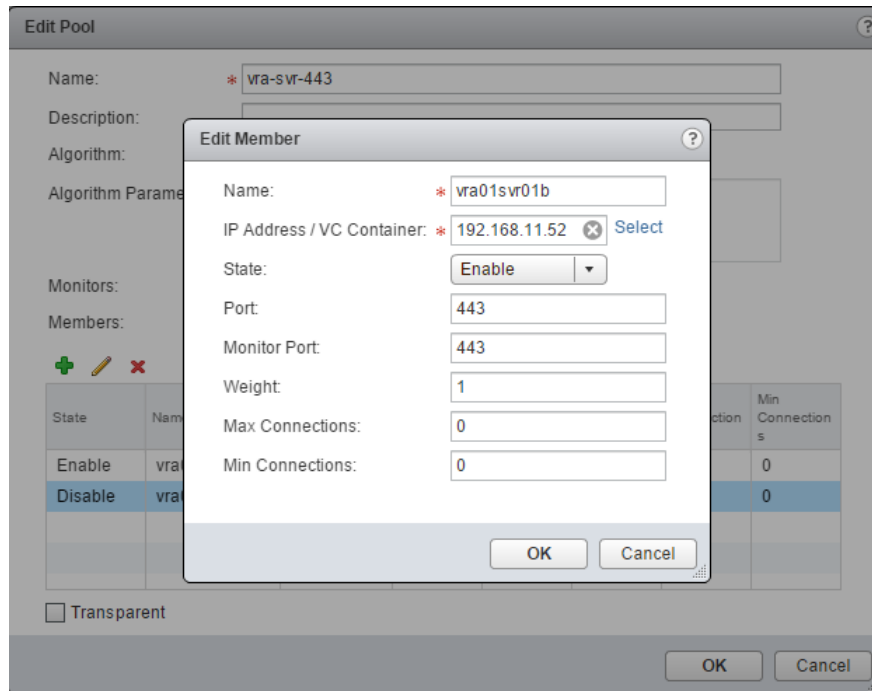

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 In the Navigator, click **Networking & Security**, and select **NSX Edges**.
- 3 Select **172.16.11.65** from the **NSX Manager** drop-down menu, and double-click **sfo01m01lb01** to edit its settings.
- 4 Click the **Manage** tab, click **Load Balancer**, and select **Pools**.
- 5 From the pools table, select the **vra-svr-443** server pool, and click **Edit** icon.
- 6 In the Edit Pool dialog box, configure the monitor, and enable the member that is not enabled.
 - a From the **Monitors** drop-down menu, select **vra-svr-443-monitor**.
 - b From the **Members** table, select **vra01svr01b** and click **Edit** icon.

- c In the Edit Member dialog box, from the **State**: drop-down menu, select **Enable** and click **OK**.
- d Click **OK** to close the Edit Pool dialog box.

- 7 Repeat the procedure to configure the health monitor and enable the second member for the remaining server pools.
- 8 Click **Show Pool Statistics** and make sure all the server pools **Status** show as **UP**.

Clean Up the vRealize Automation VM Snapshots in Region A

You made snapshots of each vRealize virtual machine during the vRealize Automation installation process. After you successfully complete the installation, you can delete these snapshots.

Repeat this procedure to remove all of the vRealize Automation virtual machine snapshots you created during the implementation. The virtual machine names and their respective folders are listed in the following table.

Virtual Machines	vCenter Folder
vra01svr01a.rainpole.local	sfo01-m01fd-vra
vra01svr01b.rainpole.local	sfo01-m01fd-vra
vra01mssql01.rainpole.local	sfo01-m01fd-vra
vra01iws01a.rainpole.local	sfo01-m01fd-vra
vra01iws01b.rainpole.local	sfo01-m01fd-vra
vra01ims01a.rainpole.local	sfo01-m01fd-vra
vra01ims01b.rainpole.local	sfo01-m01fd-vra
vra01dem01a.rainpole.local	sfo01-m01fd-vra
vra01dem01b.rainpole.local	sfo01-m01fd-vra
sfo01ias01a.sfo01.rainpole.local	sfo01-m01fd-vraias
sfo01ias01b.sfo01.rainpole.local	sfo01-m01fd-vraias

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the Home page, click **VMs and Templates**.
- 3 In the Navigator, expand the **sfo01m01vc01.sfo01.rainpole.local > sfo01-m01dc > sfo01-m01fd-vra** folder.
- 4 Right-click the **vra01dem01a.rainpole.local** VM and select **Snapshots > Manage Snapshots**.
- 5 Select the **Prior to vRA IaaS Component Installation** snapshot and click **Delete** icon.
- 6 Repeat this procedure to remove all of the remaining vRealize Automation virtual machine snapshots.

Content Library Configuration in Region A

Content libraries are container objects for VM templates, vApp templates, and other types of files. vSphere administrators can use the templates in the library to deploy virtual machines and vApps in the vSphere inventory. Sharing templates and files across multiple vCenter Server instances in same or different locations brings out consistency, compliance, efficiency, and automation in deploying workloads at scale.

You create and manage a content library from a single vCenter Server instance, but you can share the library items with other vCenter Server instances if HTTP(S) traffic is allowed between them.

Configure a Content Library in the First Compute vCenter Server Instance in Region A

Create a content library and populate it with templates that you can use to deploy virtual machines in your environment. Content libraries let you synchronize templates among different vCenter Server instances so that all of the templates in your environment are consistent.

There is only one Compute vCenter Server in this VMware Validated Design, but if you deploy more instances for use by the compute cluster they can also use this content library.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the Home page, click **Content Libraries** and click the **Create a new content library** icon.
The New Content Library wizard opens.

- 3 On the Name page, specify the following settings and click **Next**.

Setting	Value
Name	SFO01-ContentLib01
vCenter Server	sfo01w01vc01.sfo01.rainpole.local

- 4 On the Configure content library page, specify the following settings, and click **Next**.

Setting	Value
Local content library	Selected
Publish externally	Selected
Enable authentication	Selected
Password	SFO01-ContentLib01_password
Confirm password	SFO01-ContentLib01_password

- 5 On the Add storage page, click the **Select a datastore** radio button, select the **sfo01-w01-lib01** datastore to store the content library, and click **Next**.
- 6 On the Ready to complete page, click **Finish**.

Import the Virtual Machine Template OVF Files in Region A

You can import OVF packages that you previously prepared to use as a template for deploying virtual machines. The virtual machine templates that you add to the content library are used as vRealize Automation blueprints.

You repeat this procedure three times to import the virtual machine templates listed in [Table 3-5](#).

Table 3-5. VM Templates to Import

VM Template Name	Description
redhat6-enterprise-64	Red Hat Enterprise Server 6 (64-bit)
windows-2012r2-64	Windows Server 2012 R2 (64-bit)
windows-2012r2-64-sql2012	Windows Server 2012 R2 (64-bit)

Prerequisites

Verify that you have prepared the OVF templates, as specified in the *Virtual Machine Template Specifications* section.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the Home page, click **Content Libraries** and click the **Objects** tab.

- 3 Right-click the content library **SFO01-ContentLib01** and select **Import Item**.
- 4 In the Import Library Item dialog box, specify the settings for the first template and click **OK**.

Setting	Value
Source file	redhat6-enterprise-64.ovf
Item name	redhat6-enterprise-64
Notes	Red Hat Enterprise Server 6 (64-bit)

- 5 Repeat the procedure to import the remaining virtual machine templates.

Tenant Content Creation in Region A

In order to provision virtual machines in the Compute vCenter, the tenant must be configured to utilize compute resources within vCenter Server.

Prerequisites

- Verify that a vCenter Server compute cluster has been deployed and configured. See [“Deploy and Configure the Shared Edge and Compute Cluster Components in Region A,”](#) on page 90.
- Verify that an NSX instance has been configured for use by the vCenter Server compute cluster. See [“Deploy and Configure the Shared Edge and Compute Cluster NSX Instance in Region A,”](#) on page 108.
- Proxy agents have been deployed.

Create Logical Switches for Business Groups in Region A

For each vCenter Server compute instance, you create three logical switches for each business group which simulate networks for the web, database, and application tiers.

You repeat this procedure six times to create six logical switches. The "Logical Switch Names and Descriptions" table lists the logical switch names, and the business group and tier to which you assign each switch.

Table 3-6. Logical Switch Names and Descriptions

Logical Switch Name	Description
Production-Web-VXLAN	Logical switch for Web tier of Production Business Group
Production-DB-VXLAN	Logical switch for Database tier of Production Business Group
Production-App-VXLAN	Logical switch for Application tier of Production Business Group
Development-Web-VXLAN	Logical switch for Web tier of Development Business Group
Development-DB-VXLAN	Logical switch for Database tier of Development Business Group
Development-App-VXLAN	Logical switch for Application tier of Development Business Group

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Create a logical switch.
 - a Click **Networking & Security**.
 - b In the Navigator, select **Logical Switches**.
 - c From the **NSX Manager** drop-down menu, select **172.16.11.66** as the NSX Manager.
 - d Click the **New Logical Switch** icon.

The New Logical Switch dialog box appears.

 - e In the New Logical Switch dialog box, enter the following settings, and click **OK**.

Setting	Value
Name	Production-Web-VXLAN
Description	Logical switch for Web tier of Production Business Group
Transport Zone	Comp Universal Transport Zone
Replication Mode	Hybrid
Enable IP Discovery	Selected
Enable MAC Learning	Deselected

New Logical Switch

Name: * Production-Web-VXLAN

Description: Logical switch for Web tier of Production Business Group

Transport Zone: * Comp Universal Transport Zone [Change](#) [Remove](#)

Replication mode: ☐ Multicast
Multicast on Physical network used for VXLAN control plane.
☐ Unicast
VXLAN control plane handled by NSX Controller Cluster.
☒ Hybrid
Optimized Unicast mode. Offloads local traffic replication to physical network.

☒ Enable IP Discovery

☐ Enable MAC Learning

OK **Cancel**

- 3 Repeat this procedure to create the remaining logical switches.

Configure User Roles in vRealize Automation in Region A

Roles are sets of privileges that you associate with users to determine what tasks they can perform. Based on their responsibilities, individuals might have one or more roles associated with their user account. All user roles are assigned within the context of a specific tenant. However, some roles in the default tenant can manage system-wide configuration settings that apply to multiple tenants.

This procedure steps you through assigning roles to the `ug-ITAC-TenantAdmins` and `ug-ITAC-TenantArchitects` users and groups.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **`https://vra01svr01.rainpole.local/vcac/org/rainpole`**.
 - b Log in using the following credentials.

Setting	Value
User name	ITAC-LocalRainpoleAdmin
Password	<i>itac-localrainpoleadmin_password</i>
Domain	vsphere.local
- 2 Click the Administration tab.
- 3 Navigate to **Users & Groups > Directory Users and Groups**.
- 4 Enter **`ug-ITAC-TenantAdmins`** in the search box and press **Enter**.
 The **`ug-ITAC-TenantAdmins (ug-ITAC-TenantAdmins@rainpole.local)`** group name displays in the Name text box.
- 5 Click the user group name **`ug-ITAC-TenantAdmins (ug-ITAC-TenantAdmins@rainpole.local)`**.
- 6 In the Add Roles to this Group list, select the **Application Architect**, **Approval Administrator**, **Container Administrator**, **Container Architect**, **Infrastructure Architect**, **Software Architect**, **Tenant Administrator**, and **XaaS Architect** check boxes, and click **Finish**.
- 7 Enter **`ug-ITAC-TenantArchitects`** in the Tenant Administrators search box and press **Enter**.
 The **`ug-ITAC-TenantArchitects (ug-ITAC-TenantArchitects@rainpole.local)`** group name displays in the Name text box.
- 8 Click the user group name **`ug-ITAC-TenantArchitects (ug-ITAC-TenantArchitects@rainpole.local)`**.
- 9 In the Add Roles to this Group list, select the **Application Architect**, **Container Architect**, **Infrastructure Architect**, **Software Architect**, **XaaS Architect** check box, and click **Finish**.

Create Fabric Groups in Region A

IaaS administrators can organize virtualization compute resources and cloud endpoints into fabric groups by type and intent. One or more fabric administrators manage the resources in each fabric group.

Fabric administrators are responsible for creating reservations on the compute resources in their groups to allocate fabric resources to specific business groups. Fabric groups are created in a specific tenant, but their resources can be made available to users who belong to business groups in all tenants.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	rainpole.local

- 2 Select **Infrastructure > Endpoints > Fabric Groups**.
- 3 Click **New Fabric Group**, enter the following settings and click **OK**.

Setting	Value
Name	SFO Fabric Group
Fabric administrators	ug-ITAC-TenantAdmins@rainpole.local

NOTE You have not yet configured a vCenter Endpoint, so no compute resource is currently available for you to select. You will configure the vCenter Endpoint later.

- 4 Log out of the vRealize Automation portal and close your browser.

Create Machine Prefixes in Region A

As a fabric administrator, you create machine prefixes that are used to create names for machines provisioned through vRealize Automation. Tenant administrators and business group managers select these machine prefixes and assign them to provisioned machines through blueprints and business group defaults.

Machine prefixes are shared across all tenants. Every business group has a default machine prefix. Every blueprint must have a machine prefix or use the group default prefix. Fabric administrators are responsible for managing machine prefixes. A prefix consists of a base name to be followed by a counter of a specified number of digits. When the digits are all used, vRealize Automation rolls back to the first number.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	rainpole.local

- 2 Select **Infrastructure > Administration > Machine Prefixes**.

- 3 Click the **New** icon to create a default machine prefix for the Production group using the following settings, and click the **Save** icon.

Setting	Value
Name	Prod-
Number of Digits	5
Next Number	1

- 4 Click the **New** icon to create a default machine prefix for the Development group using the following settings, and click the **Save** icon.

Setting	Value
Name	Dev-
Number of Digits	5
Next Number	1

Create Business Groups in Region A

Tenant administrators create business groups to associate a set of services and resources to a set of users that often correspond to a line of business, department, or other organizational unit. Users must belong to a business group to request machines.

For this implementation create two business groups, the Production business group and the Development business group.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **`https://vra01svr01.rainpole.local/vcac/org/rainpole`**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	rainpole.local

- 2 Navigate to **Administration > Users and Groups > Business Groups**.
- 3 Click the **New** icon.
- 4 On the **General** tab, enter the following values and click **Next**.

Setting	Value
Name	Production
Send Manager emails to	ITAC-TenantAdmin@rainpole.local

- 5 On the **Members** tab, enter **`ug-ITAC-TenantAdmins@rainpole.local`** in the Group manager role text box, and click **Next**.
- 6 On the **Infrastructure** tab, select **Prod-** from the **Default machine prefix** drop-down menu and click **Finish**.
- 7 Click the **New** icon.

- 8 On the General tab, configure the following values, and click **Next**.

Setting	Value
Name	Development
Send Manager emails to	ITAC-TenantAdmin@rainpole.local

- 9 On the Members tab, enter **ug-ITAC-TenantAdmins@rainpole.local** in the Group manager role text box and click **Next**.
- 10 On the **Infrastructure** tab, select **Dev-** from the **Default machine prefix** drop-down menu, and click **Finish**.

Create Reservation Policies in Region A

You use reservation policies to group similar reservations together. Create the reservation policy tag first, then add the policy to reservations to allow a tenant administrator or business group manager to use the reservation policy in a blueprint.

When you request a machine, it can be provisioned on any reservation of the appropriate type that has sufficient capacity for the machine. You can apply a reservation policy to a blueprint to restrict the machines provisioned from that blueprint to a subset of available reservations. A reservation policy is often used to collect resources into groups for different service levels, or to make a specific type of resource easily available for a particular purpose. You can add multiple reservations to a reservation policy, but a reservation can belong to only one policy. You can assign a single reservation policy to more than one blueprint. A blueprint can have only one reservation policy. A reservation policy can include reservations of different types, but only reservations that match the blueprint type are considered when selecting a reservation for a particular request.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	itac-tenantadmin_password
Domain	rainpole.local

- 2 Navigate to **Infrastructure > Reservation > Reservation Policies**.
- 3 Click the **New** icon, configure the following settings, and click **OK**.

Setting	Value
Name	SFO-Production-Policy
Type	Reservation Policy
Description	Reservation policy for Production Business Group in SFO

- 4 Click the **New** icon, configure the following settings, and click **OK**.

Setting	Value
Name	SFO-Development-Policy
Type	Reservation Policy
Description	Reservation policy for Development Business Group in SFO

- 5 Click the **New** icon, configure the following settings, and click **OK**.

Setting	Value
Name	SFO-Edge-Policy
Type	Reservation Policy
Description	Reservation policy for Tenant Edge resources in SFO

Create a vSphere Endpoint in vRealize Automation in Region A

To allow vRealize Automation to manage the infrastructure, IaaS administrators create endpoints and configure user credentials for those endpoints. When you create a vSphere Endpoint, vRealize Automation can communicate with the vSphere environment and discover compute resources that are managed by vCenter Server, collect data, and provision machines.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **`https://vra01svr01.rainpole.local/vcac/org/rainpole`**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	rainpole.local

- 2 Navigate to **Infrastructure > Endpoints > Endpoints**, and click **New > Virtual > vSphere (vCenter)**.
- 3 On the New Endpoint - vSphere (vCenter) page, create a vSphere Endpoint with the following settings, and click **Test Connection**.

Setting	Value
Name	sfo01w01vc01.sfo01.rainpole.local
Address	<code>https://sfo01w01vc01.sfo01.rainpole.local/sdk</code>
User Name	rainpole\svc-vra
Password	<i>svc-vra_password</i>

NOTE The vSphere Endpoint name in the table above must be identical to the Endpoint name from Step 18 in [Install the vRealize Automation Environment in Region A](#).

- 4 If a Security Alert window appears, click **OK**.
- 5 Click **OK** to create the Endpoint.

Create an NSX Endpoint in vRealize Automation in Region A

When you create an endpoint for NSX, vRealize Automation can communicate with NSX Manager to discover networking resources.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	rainpole.local

- 2 Navigate to **Infrastructure > Endpoints > Endpoints** and click **New > Network and Security > NSX**.
- 3 On the General page, configure the vRealize Automation Endpoint with the following settings.

Setting	Value
Name	SFO-NSXEndpoint
Address	https://sfo01w01nsx01.sfo01.rainpole.local
User Name	rainpole\svc-vra
Password	<i>svc_vra_password</i>

- 4 Click **Test Connection**.
- 5 Click on the Associations tab, click **New**, choose **sfo01w01vc01.sfo01.rainpole.local** from the **Name** drop-down menu, and click **OK**.
- 6 If a Security Alert window appears, click **OK**.
- 7 Click **OK** to create the Endpoint.

Add Compute Resources to a Fabric Group in Region A

You allocate compute resources to fabric groups so that vRealize Automation can use the resources in that compute resource for that fabric group when provisioning virtual machines.

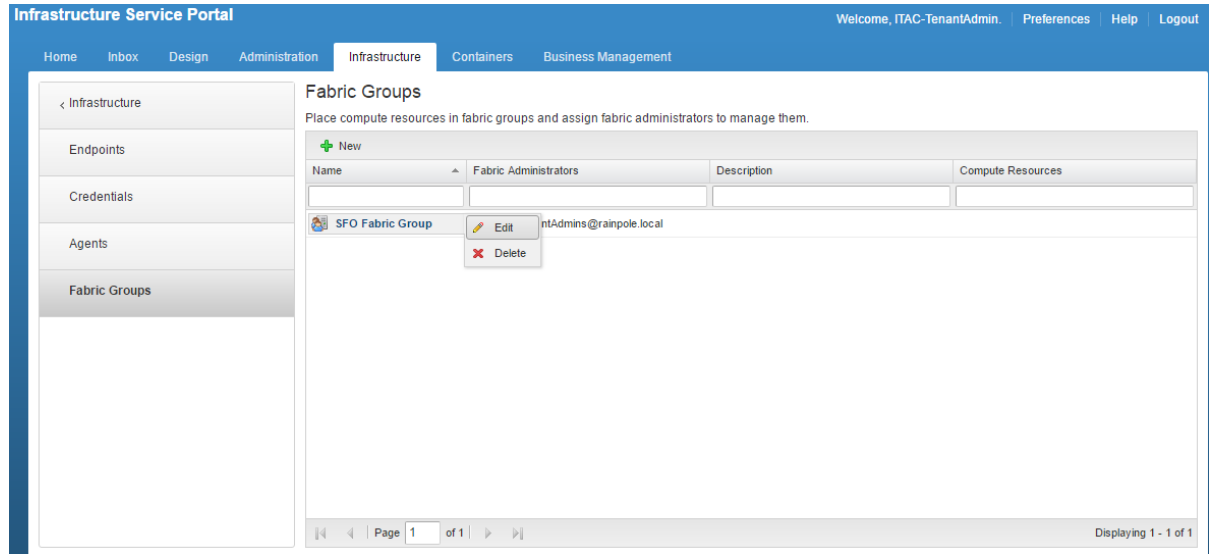

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	rainpole.local

- 2 Navigate to **Infrastructure > Endpoints > Fabric Groups**.

- 3 In the **Name** column, hover the mouse pointer over the fabric group name **SFO Fabric Group**, and click **Edit**.

- 4 On the Edit Fabric Group page, select **sfo01-w01-comp01** from the Compute resources table, and click **OK**.

NOTE It might take several minutes for vRealize Automation to connect to the Compute vCenter Server system and associated clusters. If you are still not able to see the compute cluster after sufficient time has passed, try to restart both proxy agent services in the virtual machines `sfo01ias01a.sfo01.rainpole.local` and `sfo01ias01b.sfo01.rainpole.local`.

- 5 Navigate to **Infrastructure > Compute Resources > Compute Resources**.
- 6 In the Compute Resource column, hover the mouse pointer over the compute cluster **sfo01-w01-comp01**, and click **Data Collection**.
- 7 Click on the **Request now** buttons in each field on the page.
Wait a few seconds for the data collection process to complete.
- 8 Click **Refresh**, and verify that Status for both Inventory and Network and Security Inventory shows **Succeeded**.

Create External Network Profiles in Region A

Before members of a business group can request virtual machines, fabric administrators must create network profiles to define the subnet and routing configuration for those virtual machines. Each network profile is configured for a specific network port group or virtual network to specify IP address and routing configuration for virtual machines provisioned to that network.

Repeat this procedure six times to create the following external network profiles.

- Ext-Net-Profile-Production-App
- Ext-Net-Profile-Production-DB
- Ext-Net-Profile-Production-Web
- Ext-Net-Profile-Development-App
- Ext-Net-Profile-Development-DB

■ Ext-Net-Profile-Development-Web

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	itac-tenantadmin_password
Domain	rainpole.local

- 2 Navigate to **Infrastructure > Reservations > Network Profiles**, and click **New > External**.
- 3 On the New Network Profile - External page, specify the network profiles on the **General** tab.
 - a Add the values for the Production Group External Network Profile.

Setting	Production Web Value	Production DB Value	Production App Value
Name	Ext-Net-Profile-Production-Web	Ext-Net-Profile-Production-DB	Ext-Net-Profile-Production-App
Description	External Network profile for Web Tier of Production Business Group	External Network profile for DB Tier of Production Business Group	External Network profile for App Tier of Production Business Group
Subnet mask	255.255.255.0	255.255.255.0	255.255.255.0
Gateway	172.11.10.1	172.11.11.1	172.11.12.1

- b Add the values for the Development Group External Network Profile.

Setting	Development Web Value	Development DB Value	Development App Value
Name	Ext-Net-Profile-Development-Web	Ext-Net-Profile-Development-DB	Ext-Net-Profile-Development-App
Description	External Network profile for Web Tier of Development Business Group	External Network profile for DB Tier of Development Business Group	External Network profile for App Tier of Development Business Group
Subnet mask	255.255.255.0	255.255.255.0	255.255.255.0
Gateway	172.12.10.1	172.12.11.1	172.12.12.1

- 4 Click the **DNS** tab. Enter the following values for the profile you are creating.

Setting	Value
Primary DNS	172.16.11.4
Secondary DNS	172.17.11.4
DNS suffix	sfo01.rainpole.local
DNS search suffix	sfo01.rainpole.local

- 5 Click the **Network Ranges** tab.

- 6 On the **Network Ranges** tab, click the **New** button and enter the following values for the profile you are creating.
 - a Enter the following values for Production Business Network Range.

Setting	Production Web Value	Production DB Value	Production App Value
Name	Production-Web	Production-DB	Production-App
Description	Static IP range for Web Tier of Production Group	Static IP range for DB Tier of Production Group	Static IP range for App Tier of Production Group
Start IP	172.11.10.20	172.11.11.20	172.11.12.20
End IP	172.11.10.250	172.11.11.250	172.11.12.250

- b Enter the following values for Development Business IP Range.

Setting	Development Web Value	Development DB Value	Development App Value
Name	Development-Web	Development-DB	Development-App
Description	Static IP range for Web Tier of Development Group	Static IP range for DB Tier of Development Group	Static IP range for App Tier of Development Group
Start IP	172.12.10.20	172.12.11.20	172.12.12.20
End IP	172.12.10.250	172.12.11.250	172.12.12.250

- c Click **OK** to save the network range.
- 7 Click **OK** to save the network profile.
- 8 Repeat this procedure to create additional external network profiles.

When all of the network profiles have been added, the Network Profiles page displays six profiles.

Create Reservations for the Compute Cluster in Region A

Before members of a business group can request machines, fabric administrators must allocate resources to them by creating a reservation. Each reservation is configured for a specific business group to grant them access to request machines on a specified compute resource. For the scenarios, you perform this procedure twice to create reservations for both the Production and Development business groups.

Group	Name
Production	SFO01-Comp01-Prod-Res01
Development	SFO01-Comp01-Dev-Res01

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **<https://vra01svr01.rainpole.local/vcac/org/rainpole>**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	rainpole.local

- 2 Navigate to **Infrastructure > Reservations > Reservations**, and click **New > vSphere (vCenter)**.

- 3 On the New Reservation - vSphere (vCenter) page, click the **General** tab and configure the following values.

Setting	Production Group Value	Development Group Value
Name	SFO01-Comp01-Prod-Res01	SFO01-Comp01-Dev-Res01
Tenant	rainpole	rainpole
Business Group	Production	Development
Reservation Policy	SFO-Production-Policy	SFO-Development-Policy
Priority	100	100
Enable This Reservation	Selected	Selected

- 4 On the New Reservation - vSphere (vCenter) page, click the **Resources** tab.
 - a Select **sfo01-w01-comp01(sfo01w01vc01.sfo01.rainpole.local)** from the **Compute resource** drop-down menu.
 - b In the This Reservation column of the Memory (GB) table, enter **200**.
 - c In the Storage (GB) table, select the check box for your primary datastore, for example, **sfo01-w01-vsan01**, enter **2000** in the **This Reservation Reserved** text box, enter **1** in the **Priority** text box, and click **OK**.
 - d Select **sfo01-w01rp-user-vm** from the **Resource pool** drop-down menu.
- 5 On the New Reservation - vSphere (vCenter) page, click the **Network** tab.
- 6 On the **Network** tab, select the network path check boxes listed in the table below from the Network Paths list, and select the corresponding network profile from the **Network Profile** drop-down menu for the business group whose reservation you are configuring.
 - a Configure the Production Business Group with the following values.

Production Network Path	Production Group Network Profile
<input type="checkbox"/> vxw-dvs-xxxxx-Production-Web-VXLAN	Ext-Net-Profile-Production-Web
<input type="checkbox"/> vxw-dvs-xxxxx-Production-DB-VXLAN	Ext-Net-Profile-Production-DB
<input type="checkbox"/> vxw-dvs-xxxxx-Production-App-VXLAN	Ext-Net-Profile-Production-App

- b Configure the Development Business Group with the following values.

Development Network Path	Development Group Network Profile
<input type="checkbox"/> vxw-dvs-xxxxx-Development-Web-VXLAN	Ext-Net-Profile-Development-Web
<input type="checkbox"/> vxw-dvs-xxxxx-Development-DB-VXLAN	Ext-Net-Profile-Development-DB
<input type="checkbox"/> vxw-dvs-xxxxx-Development-App-VXLAN	Ext-Net-Profile-Development-App

- 7 Click **OK** to save the reservation.
- 8 Repeat this procedure to create a reservation for the Development Business Group.

Create Reservations for the User Edge Resources in Region A

Before members of a business group can request virtual machines, fabric administrators must allocate resources to that business group by creating a reservation. Each reservation is configured for a specific business group to grant them access to request virtual machines on a specified compute resource.

Perform this procedure twice to create Edge reservations for both the Production and Development business groups.

Group	Name
Production	SFO01-Edge01-Prod-Res01
Development	SFO01-Edge01-Dev-Res01

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	itac-tenantadmin_password
Domain	rainpole.local

- 2 Navigate to **Infrastructure > Reservations > Reservations**, and click **New > vSphere (vCenter)**.
- 3 On the New Reservation - vSphere (vCenter) page, click the **General** tab, and configure the following values for your business group.

Setting	Production Group Value	Development Group Value
Name	SFO01-Edge01-Prod-Res01	SFO01-Edge01-Dev-Res01
Tenant	rainpole	rainpole
Business Group	Production	Development
Reservation Policy	SFO-Edge-Policy	SFO-Edge-Policy
Priority	100	100
Enable This Reservation	Selected	Selected

- 4 On the New Reservation - vSphere (vCenter) page, click the **Resources** tab.
 - a Select **sfo01-w01-comp01(sfo01w01vc01.sfo01.rainpole.local)** from the **Compute resource** drop-down menu.
 - b Enter **200** in the This Reservation column of the Memory (GB) table.
 - c In the Storage (GB) table, select the check box for your primary datastore, for example, **sfo01-w01-lib01**, enter **2000** in the **This Reservation Reserved** text box, enter **1** in the **Priority** text box, and click **OK**.
 - d Select **sfo01-w01rp-user-edge** from the **Resource pool** drop-down menu.
- 5 On the New Reservation - vSphere (vCenter) page, click the **Network** tab.
- 6 On the **Network** tab, select the network path check boxes listed in the table below from the Network Paths list, and select the corresponding network profile from the **Network Profile** drop-down menu for the business group whose reservation you are configuring.

Production Business Group

Production Port Group	Production Network Profile
vxxw-dvs-xxxxx-Production-Web-VXLAN	Ext-Net-Profile-Production-Web
vxxw-dvs-xxxxx-Production-DB-VXLAN	Ext-Net-Profile-Production-DB
vxxw-dvs-xxxxx-Production-App-VXLAN	Ext-Net-Profile-Production-App

Development Business Group

Development Port Group	Development Network Profile
vxw-dvs-xxxxx-Development-Web-VXLAN	Ext-Net-Profile-Development-Web
vxw-dvs-xxxxx-Development-DB-VXLAN	Ext-Net-Profile-Development-DB
vxw-dvs-xxxxx-Development-App-VXLAN	Ext-Net-Profile-Development-App

- 7 Click **OK** to save the reservation.
- 8 Repeat the procedure to create a Edge reservation for the Development Business Group.

Create Blueprint Customization Specifications in Compute vCenter Server in Region A

Create two customization specifications, one for Linux and one for Windows, for use by the virtual machines you deploy. Customization specifications are XML files that contain system configuration settings for the guest operating systems used by virtual machines. When you apply a specification to a guest operating system during virtual machine cloning or deployment, you prevent conflicts that might result if you deploy virtual machines with identical settings, such as duplicate computer names.

You will later use the customization specifications you create when you create blueprints for use with vRealize Automation.

Create a Customization Specification for Linux Blueprints in Region A

Create a Linux guest operating system specification that you can apply when you create blueprints for use with vRealize Automation. This customization specification can be used to customize virtual machine guest operating systems when provisioning new virtual machines from vRealize Automation.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Navigate to **Home > Operations and Policies > Customization Specification Manager**.
- 3 Select the vCenter Server **sfo01w01vc01.sfo01.rainpole.local** from the drop-down menu.
- 4 Click the **Create a new specification** icon.
The New VM Guest Customization Spec wizard appears.
- 5 On the Specify Properties page, select **Linux** from the **Target VM Operating System** drop-down menu, enter **itac-linux-custom-spec** for the **Customization Spec Name**, and click **Next**.
- 6 On the Set Computer Name page, select **Use the virtual machine name**, enter **sfo01.rainpole.local** in the **Domain Name** text box and click **Next**.

- 7 On the Time Zone page, specify the time zone as shown in the table below for the virtual machine, and click **Next**.

Setting	Value
Area	America
Location	Los Angeles
Hardware Clock Set To	Local Time

- 8 On the Configure Network page, click **Next**.
- 9 On the Enter DNS and domain settings page, leave the default settings, and click **Next**.
- 10 Click **Finish** to save your changes.

The customization specification that you created is listed in the **Customization Specification Manager**.

Create a Customization Specification for Windows Blueprints in Region A

Create a Windows guest operating system specification that you can apply when you create blueprints for use with vRealize Automation. This customization specification can be used to customize virtual machine guest operating systems when provisioning new virtual machines from vRealize Automation.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **<https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client>**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Navigate to **Home > Operations and Policies > Customization Specification Manager**.
- 3 Select the vCenter Server **sfo01w01vc01.sfo01.rainpole.local** from the drop-down menu.
- 4 Click the **Create a new specification** icon.
The New VM Guest Customization wizard appears.
- 5 On the Specify Properties page, select **Windows** from the **Target VM Operating System** drop-down menu, enter **itac-windows-joindomain-custom-spec** for the **Customization Spec Name**, and click **Next**.
- 6 On the Set Registration Information page, enter **Rainpole** for the virtual machine owner's **Name** and **Organization**, and click **Next**.
- 7 On the Set Computer Name page, select **Use the virtual machine name**, and click **Next**.
The operating system uses this name to identify itself on the network.
- 8 On the Enter Windows License page, provide licensing information for the Windows operating system, enter the **volume_license_key**, and click **Next**.
- 9 Specify the administrator password for use with the virtual machine, and click **Next**.
- 10 On the Time Zone page, select **(GMT-08:00) Pacific Time(US & Canada)**, and click **Next**.
- 11 On the Run Once page, click **Next**.
- 12 On the Configure Network page, click **Next**.

- 13 On the Set Workgroup or Domain page, select **Windows Server Domain**, configure the following settings, and click **Next**.

Setting	Value
Windows Server Domain	sfo01.rainpole.local
Username	ad_admin_acct@sfo01.rainpole.local
Password	ad_admin_pwd

- 14 On the Set Operating System Options page, select **Generate New Security ID (SID)**, and click **Next**.
- 15 Click **Finish** to save your changes.

The customization specification that you created is listed in the **Customization Specification Manager**.

Create Virtual Machines Using VM Templates in the Content Library in Region A

vRealize Automation cannot directly access virtual machine templates in the content library. You must create a virtual machine using the virtual machine templates in the content library, then convert the template in vCenter Server. Perform this procedure on all vCenter Server compute clusters that you add to vRealize Automation, including the first vCenter Server compute instance.

Repeat this procedure three times for each of the VM Templates in the content library. The table below lists the VM Templates and the guest OS each template uses to create a virtual machine.

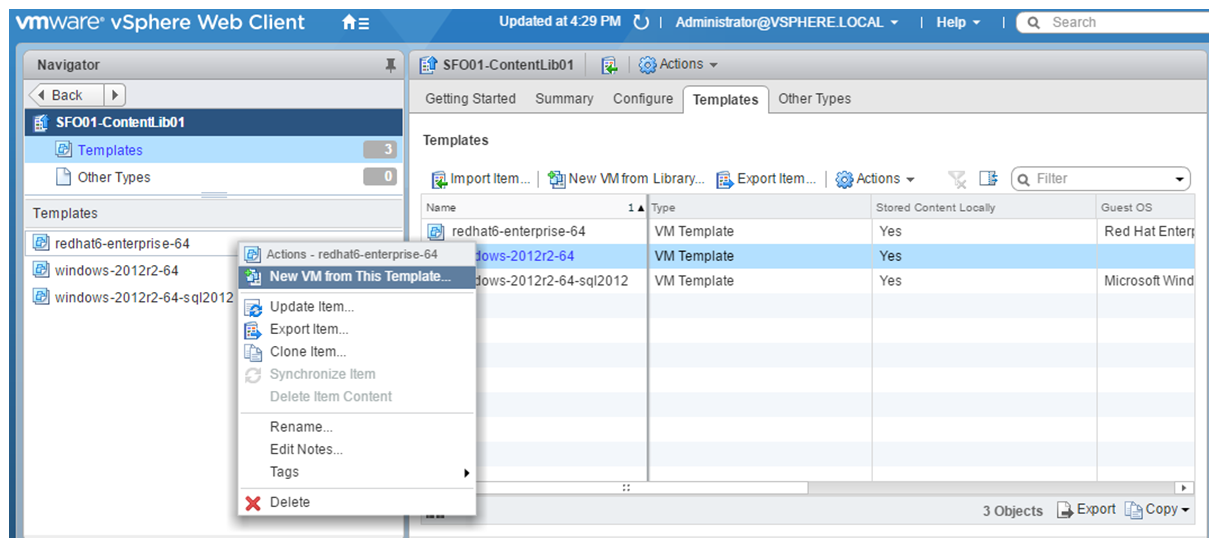

VM Template Name	Guest OS
redhat6-enterprise-64	Red Hat Enterprise Server 6 (64-bit)
windows-2012r2-64	Windows Server 2012 R2 (64-bit)
windows-2012r2-64-sql2012	Windows Server 2012 R2 (64-bit)

Procedure

- 1 Log in to the vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Navigate to **Home > VMs and Templates**.
- 3 Expand the **sfo01w01vc01.sfo01.rainpole.local** vCenter Server.
- 4 Right-click the **sfo01-w01dc** data center and select **New Folder > New VM and Template Folder**.
- 5 Create a new folder and label it **VM Templates**.
- 6 Navigate to **Home > Content Libraries**.
- 7 Click **SFO01-ContentLib01 > Templates**.
- 8 Right-click the VM Template **redhat6-enterprise-64** and click **New VM from This Template**.

The New Virtual Machine from Content Library wizard opens.

- 9 On the Select name and location page, use the same template name.

NOTE Use the same template name to create a common service catalog that works across different vCenter Server instances within your datacenter environment.

- 10 Select **VM Templates** as the folder for this virtual machine, and click **Next**.
- 11 On the Select a resource page, expand cluster **sfo01-w01-comp01** and select resource pool **sfo01-w01rp-user-vm**.
- 12 On the Review details page, verify the template details and click **Next**.
- 13 On the Select storage page, select the **sfo01-w01-lib01** datastore and select **Thin Provision** from the **Select virtual disk format** drop-down menu.
- 14 On the Select networks page, select **sfo01-w01-vds01-management** for the **Destination Network**, and click **Next**.

NOTE vRealize Automation will change the network according to the blueprint configuration.

- 15 On the Ready to complete page, review the configurations that you made for the virtual machine, and click **Finish**.

A new task for creating the virtual machine appears in the Recent Tasks pane. After the task is complete, the new virtual machine is created.

- 16 Repeat this procedure for all of the VM Templates in the content library.

Convert Virtual Machines to VM Templates in Region A

You need to convert the virtual machines directly to templates instead of making a copy by cloning.

Repeat this procedure for each of the VM Templates in the content library. The table below lists the VM Templates and the guest OS that each template uses to create a virtual machine.

VM Template Name	Guest OS
redhat6-enterprise-64	Red Hat Enterprise Server 6 (64-bit)
windows-2012r2-64	Windows Server 2012 R2 (64-bit)
windows-2012r2-64-sql2012	Windows Server 2012 R2 (64-bit)

Procedure

- 1 Log in to the Compute vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Navigate to **Home > VMs and Templates**.
- 3 In the Navigator pane, expand **sfo01w01vc01.sfo01.rainpole.local > sfo01-w01dc > VM Templates**.
- 4 Right-click the **redhat6-enterprise-64** virtual machine located in the VM Templates folder, and click **Template > Convert to Template**.
- 5 Click **Yes** to confirm the template conversion.
- 6 Repeat this procedure for all of the VM Templates in the content library, verifying that each VM Template appears in the VM Templates folder.

Configure Single Machine Blueprints in Region A

Virtual machine blueprints determine a machine's attributes, the manner in which it is provisioned, and its policy and management settings.

Create a Service Catalog in Region A

A service catalog provides a common interface for consumers of IT services to request services, track their requests, and manage their provisioned service items.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	itac-tenantadmin_password
Domain	rainpole.local

- 2 Navigate to the **Administration** tab, click **Catalog Management > Services**, and click **New**.
The New Service page appears.

- 3 In the New Service page, configure the following settings and click **OK**.

Setting	Value
Name	SFO Service Catalog
Description	Default setting (blank)
Status	Active
Icon	Default setting (blank)
Status	Default setting (blank)
Hours	Default setting (blank)
Owner	Default setting (blank)
Support Team	Default setting (blank)
Change Window	Default setting (blank)

Create a Single Machine Blueprint in Region A

Create a blueprint for cloning the windows-2012r2-64 virtual machine using the specified resources on the Compute vCenter Server. Tenants can later use this blueprint for automatic provisioning. A blueprint is the complete specification for a virtual, cloud, or physical machine. Blueprints determine a machine's attributes, the manner in which it is provisioned, and its policy and management settings.

Repeat this procedure to create the following six blueprints.

Blueprint Name	VM Template	Customization Specification	Reservation Policy
Windows Server 2012 R2 - SFO Prod	windows-2012r2-64 (sfo01w01vc01.sfo01.rainpole.local)	itac-windows-joindomain-custom-spec	SFO-Production-Policy
Windows Server 2012 R2 - SFO Dev	windows-2012r2-64 (sfo01w01vc01.sfo01.rainpole.local)	itac-windows-joindomain-custom-spec	SFO-Development-Policy
Windows Server 2012 R2 With SQL2012 - SFO Prod	windows-2012r2-64-sql2012(sfo01w01vc01.sfo01.rainpole.local)	itac-windows-joindomain-custom-spec	SFO-Production-Policy
Windows Server 2012 R2 With SQL2012 - SFO Dev	windows-2012r2-64-sql2012(sfo01w01vc01.sfo01.rainpole.local)	itac-windows-joindomain-custom-spec	SFO-Development-Policy
Redhat Enterprise Linux 6 - SFO Prod	redhat6-enterprise-64(sfo01w01vc01.sfo01.rainpole.local)	itac-linux-custom-spec	SFO-Production-Policy
Redhat Enterprise Linux 6 - SFO Dev	redhat6-enterprise-64(sfo01w01vc01.sfo01.rainpole.local)	itac-linux-custom-spec	SFO-Development-Policy

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

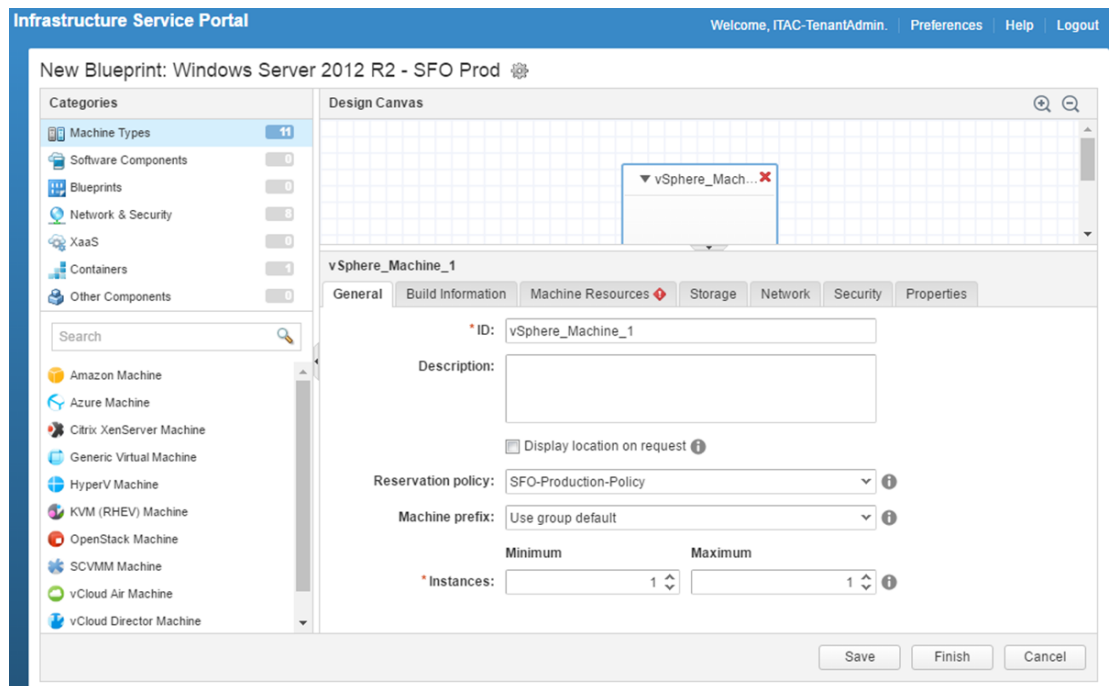

Setting	Value
User name	itac-tenantadmin
Password	itac-tenantadmin_password
Domain	rainpole.local

- 2 Navigate to **Design > Blueprints**.
- 3 Click **New**.
- 4 In the New Blueprint dialog box, configure the following settings on the **General** tab. Click **OK**.

Setting	Value
Name	Windows Server 2012 R2 - SFO Prod
Deployment limit	Default setting (blank)
Lease (days): Minimum	30
Lease (days): Maximum	270
Archive (days)	15

- 5 Select and drag the **vSphere (vCenter) Machine** icon to Design Canvas.
- 6 Click the **General** tab, configure the following settings, and click **Save**.

Setting	Default
ID	Default setting (vSphere_vCenter_Machine_1)
Description	Default setting (blank)
Display location on request	Deselected
Reservation policy	SFO-Production-Policy
Machine prefix	Use group default
Instances: Minimum	Default setting
Instances: Maximum	Default setting

- 7 Click the **Build Information** tab, configure the following settings, and click **Save**.

Setting	Value
Blueprint type	Server
Action	Clone
Provisioning workflow	CloneWorkflow
Clone from	windows-2012r2-64 template
Customization spec	itac-windows-joindomain-custom-spec

NOTE If the value of the **Clone from** setting does not list **windows-2012r2-64 template**, you must perform a data collection on the **sfo01-w01-comp01** Compute Resource.

- 8 Click the **Machine Resources** tab, configure the following settings, and click **Save**.

Setting	Minimum	Maximum
CPU	2	4
Memory (MB):	4096	16384
Storage	Default setting	Default setting

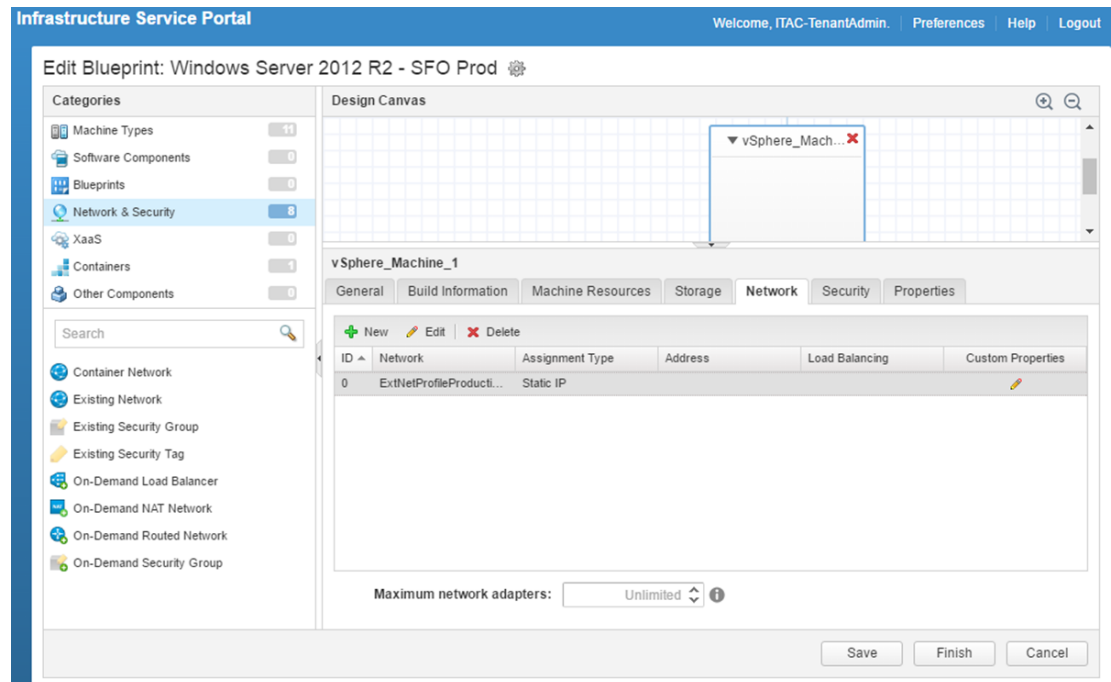

- 9 Click the **Network** tab.
- Select **Network & Security** in the Categories section to display the list of available network and security components.
 - Select the **Existing Network** component and drag it onto the design canvas.

- c Click in the **Existing network** text box and select the **Ext-Net-Profile-Production-Web** network profile.

Blueprint Name	Existing network
Windows Server 2012 R2 - SFO Prod	Ext-Net-Profile-Production-Web
Windows Server 2012 R2 - SFO Dev	Ext-Net-Profile-Development-Web
Windows Server 2012 R2 With SQL2012 - SFO Prod	Ext-Net-Profile-Production-DB
Windows Server 2012 R2 With SQL2012 - SFO Dev	Ext-Net-Profile-Development-DB
Redhat Enterprise Linux 6 - SFO Prod	Ext-Net-Profile-Production-App
Redhat Enterprise Linux 6 - SFO Dev	Ext-Net-Profile-Development-App

- d Click **Save**.
- e Select the **vSphere_vCenter_Machine** object from the design canvas.
- f Select the **Network** tab, click **New**, and configure the following settings. Click **OK**.

Network	Assignment Type	Address
ExtNetProfileProductionWeb	Static IP	Default setting (blank)
ExtNetProfileDevelopmentWeb	Static IP	Default setting (blank)
ExtNetProfileProductionDB	Static IP	Default setting (blank)
ExtNetProfileDevelopmentDB	Static IP	Default setting (blank)
ExtNetProfileProductionApp	Static IP	Default setting (blank)
ExtNetProfileDevelopmentApp	Static IP	Default setting (blank)

- g Click **Finish** to save the blueprint.
- 10 Select the blueprint **Windows Server 2012 R2 - SFO Prod** and click **Publish**.
- 11 Repeat this procedure to create additional blueprints.

Create Entitlements for Business Groups in Region A

You add a service, catalog item, or action to an entitlement, allowing the users and groups identified in the entitlement to request provisionable items in the service catalog. The entitlement allows members of a particular business group (for example, the Production business group) to use the blueprint. Without the entitlement, users cannot use the blueprint.

Perform this procedure twice to create entitlements for both the Production and Development business groups.

Entitlement Name	Status	Business Group	User & Groups
Prod-SingleVM-Entitlement	Active	Production	ug-ITAC-TenantAdmins
Dev-SingleVM-Entitlement	Active	Development	ug-ITAC-TenantAdmins

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **`https://vra01svr01.rainpole.local/vcac/org/rainpole`**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	rainpole.local

- 2 Click the **Administration** tab, and click **Catalog Management > Entitlements**.
- 3 Click **New**.
The New Entitlement page appears.
- 4 On the New Entitlement page, select the **Details** tab, configure the following values, and click **Next**.

Setting	Production Value	Development Value
Name	Prod-SingleVM-Entitlement	Dev-SingleVM-Entitlement
Description	Default setting (blank)	Default setting (blank)
Expiration Date	Default setting (blank)	Default setting (blank)
Status	Active	Active
Business Group	Production	Development
All Users and Groups	Unselected	Unselected
Users & Groups	ug-ITAC-TenantAdmins	ug-ITAC-TenantAdmins

- 5 Click the **Items & Approvals** tab.
 - a On the Entitlement Actions page, click the **Add Action** icon, add the following actions, and click **OK**.
 - Connect using RDP (Machine)
 - Power Cycle (Machine)
 - Power Off (Machine)
 - Power On (Machine)
 - Reboot (Machine)
 - Shutdown (Machine)
 - b Click **Finish**.

New Entitlement

Select the services, items, and actions to include in this entitlement. With the exception of actions and blueprint components, entitled items appear in the service catalog. Actions are available only after items are provisioned. To apply different levels of governance, you can configure individual services, items, and actions with different approval policies. You can change the approval policies associated with entitled items at any time.

- 6 Repeat this procedure to create an entitlement for the Development business group.
Use the same Entitled Actions as for the Production business group.

Configure Entitlements for Blueprints in Region A

You entitle users to the actions and items that belong to the service catalog by associating each blueprint with an entitlement.

Repeat this procedure to associate the blueprints with their entitlement.

Blueprint Name	Service Catalog	Add to Entitlement
Windows Server 2012 R2 - SFO Prod	SFO Service Catalog	Prod-SingleVM-Entitlement
Windows Server 2012 R2 - SFO Dev	SFO Service Catalog	Dev-SingleVM-Entitlement
Windows Server 2012 R2 With SQL2012 - SFO Prod	SFO Service Catalog	Prod-SingleVM-Entitlement
Windows Server 2012 R2 With SQL2012 - SFO Dev	SFO Service Catalog	Dev-SingleVM-Entitlement
Redhat Enterprise Linux 6 - SFO Prod	SFO Service Catalog	Prod-SingleVM-Entitlement
Redhat Enterprise Linux 6 - SFO Dev	SFO Service Catalog	Dev-SingleVM-Entitlement

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	rainpole.local

- 2 Select the **Administration** tab and navigate to **Catalog Management > Catalog Items**.
- 3 On the Catalog Items pane, select the **Windows Server 2012 R2 - SFO Prod** blueprint in the **Catalog Items** list and click **Configure**.
- 4 On the **General** tab of the **Configure Catalog Item** dialog box, select **SFO Service Catalog** from the **Service** drop-down menu, and click **OK**.

The screenshot shows the 'Configure Catalog Item' dialog box in the vRealize Automation Rainpole portal. The 'General' tab is selected, displaying the following configuration details:

- Name:** Windows Server 2012 Production
- Source:** Blueprint Service
- Resource type:** Deployment
- Description:** (Empty text area)
- Icon:** (Empty field with a 'Browse...' button; note: Recommended size: 100 x 100 pixels)
- Preview:** Three thumbnails are shown: 'List view', 'Catalog view', and 'Detail view'.
- Status:** Active (dropdown menu)
- Quota:** Unlimited (dropdown menu)
- Service:** SFO Service Catalog (dropdown menu)
- New and noteworthy:** (Unchecked checkbox)

The dialog box includes 'OK' and 'Cancel' buttons at the bottom right. The portal header shows 'Infrastructure Service Portal' and the user 'Welcome, ITAC-TenantAdmin'.

- 5 Associate the blueprint with the **Prod-SingleVM-Entitlement** entitlement.
 - a Click **Entitlements** and select **Prod-SingleVM-Entitlement**.
The Edit Entitlement pane appears.
 - b Select the **Items & Approvals** tab and add the **Windows Server 2012 R2 - SFO Prod** blueprint to the **Entitled Items** list. Click **OK**.
 - c Click **Finish**.

Edit Entitlement

General Items & Approvals

Select the services, items, and actions to include in this entitlement. With the exception of actions and blueprint components, entitled items appear in the service catalog. Actions are available only after items are provisioned. To apply different levels of governance, you can configure individual services, items, and actions with different approval policies. You can change the approval policies associated with entitled items at any time.

Test the Deployment of a Single Machine Blueprint in Region A

Test your environment and confirm the successful provisioning of virtual machines using the blueprints that have been created.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **`https://vra01svr01.rainpole.local/vcac/org/rainpole`**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	<i>itac-tenantadmin_password</i>
Domain	Rainpole.local

- 2 Select the **Catalog** tab, and click **SFO Service Catalog** from the catalog of available services.
- 3 Click the **Request** button for the **Windows Server 2012 R2 - SFO Prod** blueprint.
- 4 Click **Submit**.
- 5 Verify the request finishes successfully.
 - a Select the **Requests** tab.
 - b Select the request you submitted and wait several minutes for the request to complete.
Click the **Refresh** icon every few minutes until a Successful message appears under Status.
 - c Click **View Details**.
 - d Under Status Details, verify that the virtual machine successfully provisioned.
- 6 Verify the virtual machine provisions in the consolidated cluster.
 - a Open a Web browser and go to **`https://sfo01w01vc01.sfo01.rainpole.local`**.
 - b Log in as the vCenter Server administrator using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vcenter_admin_password</i>

- c Select **Home > VMs and Templates**.
 - d In the Navigator panel, expand the vCenter Server cluster **sfo01w01vc01.sfo01.rainpole.local > sfo01-w01-comp01 > sfo01-w01rp-user-vm**, and verify the existence of the virtual machine.

Region A Operations Implementation

Deploy vRealize Operations Manager and vRealize Log Insight in Region A to add monitoring capabilities to your SDDC.

Procedure

- 1 [Region A vRealize Operations Manager Implementation](#) on page 259
Deploy the vRealize Operations Manager analytics cluster to monitor the resources in your SDDC. Deploy also remote collectors to collect data from the vCenter Server instances in Region A.
- 2 [Region A vRealize Log Insight Implementation](#) on page 300
Deploy vRealize Log Insight in a cluster configuration of three nodes with an integrated load balancer: one master and two worker nodes.
- 3 [Region A vSphere Update Manager Download Service Implementation](#) on page 343
Install the vSphere Update Manager Download Service (UMDS) on a Linux virtual machine to download and store binaries and metadata in a shared repository in Region A. Connect UMDS to the vSphere Update Manager instance on the Management vCenter Server and on Compute vCenter Server.

Region A vRealize Operations Manager Implementation

Deploy the vRealize Operations Manager analytics cluster to monitor the resources in your SDDC. Deploy also remote collectors to collect data from the vCenter Server instances in Region A.

Procedure

- 1 [Deploy vRealize Operations Manager in Region A](#) on page 260
Start the deployment of vRealize Operations Manager in Region A by deploying the nodes of the analytics cluster and the remote collector nodes.
- 2 [Configure the Load Balancer for vRealize Operations Manager in Region A](#) on page 273
Configure load balancing for the analytics cluster on the dedicated sfo01m01lb01 NSX Edge services gateway for Region A. The remote collector group for Region A does not require load balancing.
- 3 [Add an Authentication Source for the Active Directory in Region A](#) on page 276
Connect vRealize Operations Manager to the Active Directory of the SDDC for central user management and access control.
- 4 [Configure User Access in vSphere for Integration with vRealize Operations Manager in Region A](#) on page 277
Configure operations service accounts with permissions that are required to enable vRealize Operations Manager access to monitoring data on the Management vCenter Server and Compute vCenter Server in Region A.

- 5 [Add vCenter Adapter Instances to vRealize Operations Manager for Region A](#) on page 279
After you deploy the analytics cluster and the remote collector nodes of vRealize Operations Manager in Region A and start vRealize Operations Manager, pair a vCenter Adapter instance with the Management vCenter Server and another adapter instance with the Compute vCenter Server in Region A.
- 6 [Connect vRealize Operations Manager to the NSX Managers in Region A](#) on page 281
Install and configure the vRealize Operations Management Pack for NSX for vSphere to monitor the NSX networking services deployed in each vSphere cluster and view the vSphere hosts in the NSX transport zones. You can also access end to end logical network topologies between any two virtual machines or NSX objects for better visibility into logical connectivity. Physical host and network device relationship in this view also helps in isolating problems in the logical or physical network.
- 7 [Connect vRealize Operations Manager to vRealize Automation in Region A](#) on page 287
Install and configure the vRealize Operations Manager Management Pack for vRealize Automation to monitor the health and capacity risk of your cloud infrastructure in the context of the tenant's business groups.
- 8 [Connect vRealize Operations Manager with vRealize Business in Region A](#) on page 292
Configure the vRealize Operations Manager Management Pack for vRealize Business to view your infrastructure performance, cost information, and also troubleshooting tips. You can connect vRealize Operations Manager to a single instance of vRealize Business for Cloud.
- 9 [Enable Storage Device Monitoring in vRealize Operations Manager in Region A](#) on page 295
Install and configure the vRealize Operations Management Pack for Storage Devices to view the storage topology, and to monitor the capacity and problems on storage components.
- 10 [Enable vSAN Monitoring in vRealize Operations Manager in Region A](#) on page 297
Configure the vRealize Operations Management Pack for vSAN to view the vSAN topology, and to monitor the capacity and problems.
- 11 [Configure E-Mail Alerts for vRealize Operations Manager in Region A](#) on page 300
You configure e-mail notifications in vRealize Operations Manager so that users and applications receive the administrative alerts from vRealize Operations Manager about certain situations in the data center.

Deploy vRealize Operations Manager in Region A

Start the deployment of vRealize Operations Manager in Region A by deploying the nodes of the analytics cluster and the remote collector nodes.

Procedure

- 1 [Prerequisites for Deploying vRealize Operations Manager in Region A](#) on page 261
Before you deploy vRealize Operations Manager, verify that your environment satisfies the requirements for this deployment.
- 2 [Deploy the Analytics Cluster Virtual Appliances in Region A](#) on page 263
Use the vSphere Web Client to deploy each vRealize Operations Manager analytics node as a virtual appliance on the management cluster in Region A.
- 3 [Configure the Master Node in the Analytics Cluster in Region A](#) on page 265
After you deploy the virtual appliance for the master node of the vRealize Operations Manager analytics cluster, enable its administration role in the cluster.

- 4 [Configure the Master Replica Node in the Analytics Cluster in Region A](#) on page 266
After you deploy a virtual appliance instance for the master replica node and configure a master node in the cluster, enable the cluster node functionality of the master replica node and join it to the analytics cluster.
- 5 [Configure the Data Node in the Analytics Cluster in Region A](#) on page 266
After you deploy the virtual appliance for a data node of the vRealize Operations Manager analytics cluster, enable its role in the cluster.
- 6 [Deploy the Remote Collector Virtual Appliances in Region A](#) on page 267
After you deploy and enable the roles of the analytics cluster nodes, use the vSphere Web Client to deploy each of the two virtual appliances for the remote collector group in Region A. In a multi-region environment, you deploy remote collectors to forward data from the vCenter Server instances in Region A to the analytics cluster also to support failover of the analytics cluster.
- 7 [Connect the Remote Collector Nodes to the Analytics Cluster in Region A](#) on page 269
After you deploy the virtual appliances for the remote collector nodes on the Management vCenter Server, configure the settings of the remote collectors and connect them to the analytics cluster.
- 8 [Configure DRS Anti-Affinity Rules for vRealize Operations Manager in Region A](#) on page 270
To protect the vRealize Operations Manager virtual machines from a host-level failure, configure vSphere DRS to run both the virtual machines of the analytics cluster and of the remote collectors on different hosts in the management cluster.
- 9 [Enable High Availability and Start vRealize Operations Manager in Region A](#) on page 271
After you deploy the virtual appliances for the analytics cluster nodes and remote collector nodes, enable high availability in the analytics cluster by assigning the replica role to the vrops01svr01b node, and start the analytics cluster.
- 10 [Assign a License to vRealize Operations Manager in Region A](#) on page 271
After you deploy and start vRealize Operations Manager in Region A, you assign a valid license.
- 11 [Group Remote Collector Nodes in Region A](#) on page 272
After you start vRealize Operations Manager and assign it a license, join the remote collectors in a group for adapter resiliency in the cases where the collector experiences network interruption or becomes unavailable.

Prerequisites for Deploying vRealize Operations Manager in Region A

Before you deploy vRealize Operations Manager, verify that your environment satisfies the requirements for this deployment.

IP Addresses and Host Names

Verify that static IP addresses and FQDNs for the application virtual network are available for the first region of the SDDC deployment.

For the analytics cluster application virtual network, allocate 3 static IP addresses and FQDNs for the nodes and one for the load balancer, and map host names to the IP addresses. For the remote collector group, allocate 2 static IP addresses and FQDNs.

Table 4-1. Application Virtual Network Names for vRealize Operations Manager

vRealize Operations Manager Component	Application Virtual Network
Analytics Cluster	Mgmt-xRegion01-VXLAN
Remote Collector Group	Mgmt-RegionA01-VXLAN

Table 4-2. IP Addresses and Host Names for the Analytics Cluster in Region A

Role	IP Address	FQDN
External load balancer VIP address	192.168.11.35	vrops01svr01.rainpole.local
Master node	192.168.11.31	vrops01svr01a.rainpole.local
Master replica node	192.168.11.32	vrops01svr01b.rainpole.local
Data node 1	192.168.11.33	vrops01svr01c.rainpole.local
Default gateway	192.168.11.1	-
DNS server	■ 172.16.11.4 ■ 172.17.11.4	-
Subnet mask	255.255.255.0	-
NTP servers	■ 172.16.11.251 ■ 172.17.11.251	■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local

Table 4-3. IP Addresses and Host Names for the Remote Collectors in Region A

Role	IP Address	FQDN
Remote collector node 1	192.168.31.31	sfo01vropsc01a.sfo01.rainpole.local
Remote collector node 2	192.168.31.32	sfo01vropsc01b.sfo01.rainpole.local
Default gateway	192.168.31.1	-
DNS server	172.16.11.5	-
Subnet mask	255.255.255.0	-

Deployment Prerequisites

Verify that your environment satisfies the following prerequisites for deployment of vRealize Operations Manager.

Prerequisite	Value
Storage	<ul style="list-style-type: none"> ■ Virtual disk provisioning. <ul style="list-style-type: none"> ■ Thin ■ Required storage per analytics cluster node. <ul style="list-style-type: none"> ■ Initial storage for the analytics cluster node: 274 GB ■ Additional storage for monitoring data per analytics cluster node: 750 GB ■ Required storage per remote collector group node. <ul style="list-style-type: none"> ■ Initial storage per node: 274 GB
Software Features	<ul style="list-style-type: none"> ■ Verify that vCenter Server is operational. ■ Verify that the vSphere cluster has vSphere DRS and HA enabled. ■ Verify that the NSX Manager is operational. ■ Verify that the application virtual networks are available. ■ Verify that the Load Balancer service is enabled on the NSX Edge services gateway. ■ Verify that vRealize Log Insight is operational. ■ Verify that vRealize Automation is operational. ■ Verify that vRealize Business for Cloud is operational. ■ Verify that Postman REST API App is installed in your Chrome browser.
Installation Package	<ul style="list-style-type: none"> ■ Download the .ova file of the vRealize Operations Manager virtual appliance on the machine where you use the vSphere Web Client. ■ Download the .pak file for the vRealize Operations Manager Management Pack for NSX for vSphere from VMware Solutions Exchange. ■ Download the .pak file for the vRealize Operations Manager Management Pack for Storage Devices from VMware Solutions Exchange.

Prerequisite	Value
License	■ Verify that you have obtained a license that covers the use of vRealize Operations Manager.
Active Directory	■ Verify that you have a parent active directory with the SDDC user roles configured for the rainpole.local domain.
Certification Authority	<ul style="list-style-type: none"> ■ Configure the root Active Directory domain controller as a certificate authority for the environment. ■ Download the CertGenVVD tool and generate the signed certificate for the analytics cluster. See the <i>VMware Validated Design Planning and Preparation</i> documentation.
External Services	<ul style="list-style-type: none"> ■ Verify that you have access to a SMTP server. ■ Verify that SNMP is enabled in your network environment, to monitor network devices. ■ Verify that Link Layer Discovery Protocol (LLDP) or Cisco Discovery Protocol (CDP) is enabled on each network device, for complete monitoring of your environment.

Deploy the Analytics Cluster Virtual Appliances in Region A

Use the vSphere Web Client to deploy each vRealize Operations Manager analytics node as a virtual appliance on the management cluster in Region A.

You repeat the deployment for each of the three analytics nodes: master, master replica, and data.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Navigate to the sfo01m01vc01.sfo01.rainpole.local vCenter Server object.
- 3 Right-click the **sfo01m01vc01.sfo01.rainpole.local** object and select **Deploy OVF Template**.
- 4 On the Select template page, select **Local file**, browse to the location of the vRealize Operations Manager OVA file on your file system, and click **Next**.
- 5 On the Select name and location page, enter a node name, select the inventory folder for the virtual appliance, and click **Next**.
 - a Enter a name for the node according to its role.

Name	Role
vrops01svr01a	Master node
vrops01svr01b	Master replica node
vrops01svr01c	Data node 1

- b Select the inventory folder for the virtual appliance.

Setting	Value
vCenter Server	sfo01m01vc01.sfo01.rainpole.local
Datacenter	sfo01-m01dc
Folder	sfo01-m01fd-vrops

- 6 On the Select a resource page, select the following values, and click **Next**.

Setting	Value
Datacenter	sfo01-m01dc
Cluster	sfo01-m01-mgmt01

- 7 On the Review details page, examine the virtual appliance details, such as product, version, download and disk size, and click **Next**.
- 8 On the Accept license agreements page, accept the end user license agreements and click **Next**.
- 9 On the Select configuration page, from the **Configuration** drop-down menu, select the **Medium** deployment configuration of the virtual appliance, and click **Next**.
- 10 On the Select storage page, select the following datastore and configure its settings, and click **Next**.

Setting	Value
Select virtual disk format	Thin provision
VM Storage Policy	vSAN Default Storage Policy
Datastore	sfo01-m01-vsan01

- 11 On the Select networks page, select the distributed port group on the **sfo01-m01-vds01** distributed switch that ends with **Mgmt-xRegion01-VXLAN**, and click **Next**.
- 12 On the Customize template page, set IPv4 settings and select the time zone for the virtual appliance, and click **Next**.
- a In the Networking Properties section, configure the following IPv4 settings.

Setting	Value
DNS server	172.16.11.4, 172.17.11.4
Default gateway	192.168.11.1
Static IPv4 address	<ul style="list-style-type: none"> ■ 192.168.11.31 for vrops01svr01a ■ 192.168.11.32 for vrops01svr01b ■ 192.168.11.33 for vrops01svr01c
Subnet mask	255.255.255.0
Timezone setting	Etc/UTC

- 13 On the Ready to complete page, verify that the settings for deployment are correct, and click **Finish**.
- 14 After the virtual appliance is deployed, expand the data disk of the virtual appliance to collect and store data from a large number of virtual machines.
- a In the vSphere Web Client, navigate to the virtual appliance object.
- b Right-click the virtual appliance and select **Edit Settings**.
- c In the Edit Settings dialog box, locate **Hard disk 2**, increase the size of the virtual appliance disk from 250 GB to 1 TB, and click **OK**.
- 15 After the virtual appliance configuration is updated, right-click the virtual appliance object and select **Power > Power On**.

During the power-on process, the virtual appliance expands the vRealize Operations Manager data partition as well.

- 16 Change the default empty password for the root user.
 - a In the vSphere Web Client, right-click the analytics virtual appliance and select **Open Console** to open the remote console to the appliance.

Name	Role
vrops01svr01a	Master node
vrops01svr01b	Master replica node
vrops01svr01c	Data node 1

 - b Press ALT+F1 to switch to the command prompt.
 - c At the command prompt, log in as the **root** user using empty password.
 - d At the command prompt, change the default empty password for the root user account with a new **vrops_root_password** password.
 - e Close the virtual appliance console.
- 17 Repeat this procedure to deploy the vRealize Operations Manager virtual appliance for the next node in the analytics cluster.

Configure the Master Node in the Analytics Cluster in Region A

After you deploy the virtual appliance for the master node of the vRealize Operations Manager analytics cluster, enable its administration role in the cluster.

Procedure

- 1 Open a Web browser and go to **https://vrops01svr01a.rainpole.local**.
- 2 On the Get Started page, click **New Installation**.
- 3 On the Getting Started page, review the steps for creating a cluster, and click **Next**.
- 4 On the Set Administrator Password page, type and confirm the password for the admin user account.
- 5 On the Choose Certificate page, click the **Install a certificate** button, click **Browse**, select the certificate chain .pem file that contains the own private key and the issuer and own certificate files, and click **Next**.

You generate a PEM file **vrops.2.chain.pem** by using the CertGenVVD tool.

After the setup imports and validates the certificate, notice that the certificate has a common name, **vrops01svr01.rainpole.local**, and a subject alternative name that contains **vrops01svr01a.rainpole.local** for the master node.

- 6 On the Deployment Settings page, configure the following settings, and click **Next**.

Setting	Value
Cluster Master Node Name	vrops01svr01a
NTP Server Address	ntp.sfo01.rainpole.local

- 7 On the Ready To Complete page, click **Finish**

When the configuration process completes, the vRealize Operations Manager Administration console opens.
- 8 Click **System Status** in the Administration panel to verify that you have a vRealize Operations Manager instance created.

The virtual appliance instance acting as the master node appears in the Nodes in the vRealize Operations Manager Cluster list.

Configure the Master Replica Node in the Analytics Cluster in Region A

After you deploy a virtual appliance instance for the master replica node and configure a master node in the cluster, enable the cluster node functionality of the master replica node and join it to the analytics cluster.

Procedure

- 1 Open a Web browser and go to **`https://vrops01svr01b.rainpole.local`**.
- 2 On the Get Started page, click **Expand an Existing Installation**.
- 3 On the Getting Started page, review the steps for creating a cluster, and click **Next**.
- 4 On the Node Settings and Cluster Info page, configure the settings of the node in the analytics cluster.
 - a Enter a node name, select a node type, and enter the master node address.

Setting	Value
Node name	vrops01svr01b
Node type	Data
Master node IP address or FQDN	vrops01svr01a.rainpole.local

- b Click **Validate** next to the **Master node IP address or FQDN**.
The certificate of the master node appears in the text box.
 - c Verify that the master certificate is correct, and click **Accept this certificate**.
 - d Click **Next**.
- 5 On the Username And Password page, select **Use cluster administrator user name and password**, enter the **`vrops_admin_password`** password for the admin user, and click **Next**.
- 6 On the Ready To Complete page, click **Finish**.
When the configuration process completes, the vRealize Operations Manager Administration console opens.
- 7 Click **System Status** in the Administration panel to verify that the node is added to the vRealize Operations Manager cluster.
The virtual appliance instance acting as the data node appears in the **Nodes in the vRealize Operations Manager Cluster** list.

Configure the Data Node in the Analytics Cluster in Region A

After you deploy the virtual appliance for a data node of the vRealize Operations Manager analytics cluster, enable its role in the cluster.

Procedure

- 1 Open a Web browser and go to **`https://vrops01svr01c.rainpole.local`**.
- 2 On the Get Started page, click **Expand an Existing Installation**.
- 3 On the Getting Started page, review the steps for creating a cluster, and click **Next**.

- 4 On the Node Settings and Cluster Info page, configure the settings of the node in the analytics cluster.
 - a Enter a node name, select a node type, and enter the master node address.

Setting	Value
Node name	vrops01svr01c
Node type	Data
Master node IP address or FQDN	vrops01svr01a.rainpole.local

- b Click **Validate** next to the **Master node IP address or FQDN**.
The certificate of the master node appears in the text box.
 - c Verify that the master certificate is correct, and click **Accept this certificate**.
 - d Click **Next**.
- 5 On the Username And Password page, select **Use cluster administrator user name and password**, enter the **vrops_admin_password** password for the admin user, and click **Next**.
- 6 On the Ready To Complete page, click **Finish**.

After the configuration process completes, the vRealize Operations Manager Administration console opens.

- 7 Click **System Status** in the Administration panel to verify that the node is added to the vRealize Operations Manager cluster.

The virtual appliance instance that is acting as the data node appears in the Nodes in the vRealize Operations Manager Cluster list.

Deploy the Remote Collector Virtual Appliances in Region A

After you deploy and enable the roles of the analytics cluster nodes, use the vSphere Web Client to deploy each of the two virtual appliances for the remote collector group in Region A. In a multi-region environment, you deploy remote collectors to forward data from the vCenter Server instances in Region A to the analytics cluster also to support failover of the analytics cluster.

Repeat this procedure two times to deploy two remote collector appliances.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Navigate to the sfo01m01vc01.sfo01.rainpole.local vCenter Server object.
- 3 Right-click the **sfo01m01vc01.sfo01.rainpole.local** object and select **Deploy OVF Template**.
- 4 On the Select template page, select **Local file**, browse to the location of the vRealize Operations Manager OVA file on your file system, and click **Next**.

- 5 On the Select name and location page, enter a node name, select the inventory folder for the virtual appliance, and click **Next**.

Setting	Value
Name of remote collector 1	sfo01vrops01a
Name of remote collector 2	sfo01vrops01b
vCenter Server	sfo01m01vc01.sfo01.rainpole.local
Data center	sfo01-m01dc
Folder	sfo01-m01fd-vropsrc

- 6 On the Select a resource page, select the following values, and click **Next**.

Setting	Value
Data center	sfo01-m01dc
Cluster	sfo01-m01-mgmt01

- 7 On the Review details page, examine the virtual appliance details, such as product, version, download and disk size, and click **Next**.
- 8 On the Accept license agreements page, accept the end user license agreements and click **Next**.
- 9 On the Select configuration page, from the **Configuration** drop-down menu, select the **Remote Collector (Standard)** deployment configuration of the virtual appliance, and click **Next**.
- 10 On the Select storage page, select the datastore indicated in the table below, and click **Next**.

Setting	Value
Select virtual disk format	Thin provision
VM Storage Policy	vSAN Default Storage Policy
Datastore table	sfo01-m01-vsan01

- 11 On the Select networks page, select the distributed port group on the sfo01-m01-vds01 distributed switch that ends with Mgmt-RegionA01-VXLAN and click **Next**.
- 12 On the Customize template page, set the IPv4 settings and select the time zone for the virtual appliance and click **Next**.
- a In the Networking Properties section, configure the following IPv4 settings.

Option	Description
DNS server	172.16.11.5
Default gateway	192.168.31.1
Static IPv4 address	<ul style="list-style-type: none"> ■ 192.168.31.31 for remote collector 1 ■ 192.168.31.32 for remote collector 2
Subnet mask	255.255.255.0
Timezone setting	Etc/UTC

- 13 On the Ready to complete page, verify that the settings for deployment are correct, and click **Finish**.
- 14 After the virtual appliance is deployed, right-click the virtual appliance object and select **Power > Power On**.

- 15 Change the default empty password for the root user.
 - a In the vSphere Web Client, right-click the remote collector virtual appliance and select **Open Console** to open the remote console to the appliance.

Name	Role
sfo01vropsc01a	Remote collector 1
sfo01vropsc01b	Remote collector 2

- b Press ALT+F1 to switch to the command prompt.
 - c At the command prompt, log in as the **root** user using empty password.
 - d At the command prompt, change the default empty password for the root user account with a new **vrops_root_password** password.
 - e Close the virtual appliance console.
- 16 Repeat the procedure to deploy the second remote collector appliance.

Connect the Remote Collector Nodes to the Analytics Cluster in Region A

After you deploy the virtual appliances for the remote collector nodes on the Management vCenter Server, configure the settings of the remote collectors and connect them to the analytics cluster.

Procedure

- 1 Open a Web browser, and go to the initial setup user interface of each remote collector virtual appliance.

Remote Collector Node	URL for Setup Interface
Remote collector 1	https://sfo01vropsc01a.sfo01.rainpole.local
Remote collector 2	https://sfo01vropsc01b.sfo01.rainpole.local

- 2 On the Get Started page, click **Expand an Existing Installation**.
- 3 On the Getting Started page, review the steps for creating a cluster, and click **Next**.
- 4 On the Node Settings And Cluster Info page, configure the settings of the remote collector node.
 - a Enter a node name, select a node type, and enter the master node address.

Setting	Value
Node name	<ul style="list-style-type: none"> ■ sfo01vropsc01a for remote collector 1 ■ sfo01vropsc01b for remote collector 2
Node type	Remote Collector
Master node IP address or FQDN	vrops01svr01a.rainpole.local

- b Click **Validate** next to the **Master node IP address or FQDN** text box.
The certificate of the master node appears in the text box.
 - c Validate that the master certificate is correct, click **Accept this certificate**, and click **Next**.
- 5 On the Username And Password page, select **Use cluster administrator user name and password**, enter the **vrops_admin_password** password for the admin user, and click **Next**.
- 6 On the Ready to Complete page, click **Finish**.

After the configuration process completes, the vRealize Operations Manager Administration console opens.

- 7 Click **System Status** in the Administration panel to verify that the node is added to the vRealize Operations Manager cluster.

The virtual appliance instance acting as the remote collector node appears in the Nodes in the vRealize Operations Manager Cluster list.

- 8 Repeat the procedure to configure the second remote collector node.

After the configuration of the second remote collector is complete, the cluster on the System Status page of the administration user interface consists of the following nodes: vrops01svr01a, vrops01svr01b, vrops01svr01b, and the remote collectors sfo01vropsc01a and sfo01vropsc01b.

Configure DRS Anti-Affinity Rules for vRealize Operations Manager in Region A

To protect the vRealize Operations Manager virtual machines from a host-level failure, configure vSphere DRS to run both the virtual machines of the analytics cluster and of the remote collectors on different hosts in the management cluster.

You use two anti-affinity rules for the analytics virtual machines: one for the analytics nodes and one for the remote collector nodes. This rule configuration also accommodates the case when you place a host from the management cluster in maintenance mode.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Navigate to the sfo01m01vc01.sfo01.rainpole.local vCenter Server object, and under the sfo01-m01dc data center object select the **sfo01-m01-mgmt01** cluster.
- 3 Click the **Configure** tab.
- 4 Under the Configuration group of settings, select **VM/Host Rules**.
- 5 Create the new anti-affinity rules for the vRealize Operations Manager analytics cluster and remote collectors using the following settings.

Setting	Value for the Analytics Nodes	Value for the Remote Collectors
Name	anti-affinity-rule-vropsm	anti-affinity-rule-vropsr
Enable rule	Selected	Selected
Type	Separate Virtual Machines	Separate Virtual Machines
Members	<ul style="list-style-type: none"> ■ vrops01svr01a ■ vrops01svr01b ■ vrops01svr01c 	<ul style="list-style-type: none"> ■ sfo01vropsc01a ■ sfo01vropsc01b

- a In the VM/Host Rules list, click **Add** above the rules list.
- b In the Create VM/Host Rule dialog box, add the new anti-affinity rule for the virtual machines of the vRealize Operations Manager analytics cluster, and click **OK**.
- c Repeat the step to add the anti-affinity rule for the remote collector virtual machines of the vRealize Operations Manager.

Enable High Availability and Start vRealize Operations Manager in Region A

After you deploy the virtual appliances for the analytics cluster nodes and remote collector nodes, enable high availability in the analytics cluster by assigning the replica role to the vrops01svr01b node, and start the analytics cluster.

Procedure

- 1 Log in to vRealize Operations Manager by using the administration interface.
 - a Open a Web browser and go to **https://vrops01svr01a.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vrops_admin_password

On the System Status page, the cluster status is **Not Started**, and the high availability of the cluster is **Disabled**.

- 2 On the System Status page, click **Enable** under High Availability.

A list of all nodes that have the data node role appears.

- 3 In the Enable High Availability dialog box, configure the following values, and click **OK**.

Setting	Value
vrops01svr01b	Selected
Enable High Availability for this cluster	Selected

High availability becomes enabled after several minutes. The vrops01svr01a is the master node, vrops01svr01b is the master replica node, and the remaining nodes are data and remote collectors nodes.

- 4 Click **Start vRealize Operations Manager**.
- 5 On the Confirm First Application Startup dialog, click **Yes** to confirm the startup of vRealize Operations Manager.

After several minutes, the nodes of the vRealize Operations Manager cluster start. The analytics cluster and remote collectors for Region A are online. You are logged out from the administrator interface of the master node.

Assign a License to vRealize Operations Manager in Region A

After you deploy and start vRealize Operations Manager in Region A, you assign a valid license.

Procedure

- 1 Log in to vRealize Operations Manager by using the administration interface.
 - a Open a Web browser and go to **https://vrops01svr01a.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vrops_admin_password

- 2 On the Welcome page of the vRealize Operations Manager Configuration wizard, examine the process overview, and click **Next**.
- 3 On the Accept EULA page, accept the end user license agreement, and click **Next**.
- 4 On the Enter Product License Key page, enter the vRealize Operations Manager product license key.
 - a Select **Product Key** and enter the license key.
 - b Click **Validate License Key**, and click **Next**.
- 5 (Optional) On the Customer Experience Improvement Program page, to send technical information for product improvement, select **Join the VMware Customer Experience Improvement Program** and click **Next**.
- 6 On the Ready to Complete page, click **Finish**.

The vRealize Operations Manager user interface opens.

Group Remote Collector Nodes in Region A

After you start vRealize Operations Manager and assign it a license, join the remote collectors in a group for adapter resiliency in the cases where the collector experiences network interruption or becomes unavailable.

Procedure

- 1 Log in to vRealize Operations Manager by using the administration interface.
 - a Open a Web browser and go to **https://vrops01svr01a.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrops_admin_password</i>

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Management** and click **Collector Groups**.
- 4 Click **Add**.
- 5 In the Add New Collector Group dialog box, configure the following settings, and click **Save**.

Setting	Value
Name	sfo01-remote-collectors
Description	Remote collector group for sfo01
sfo01vropsc01a	Selected
sfo01vropsc01b	Selected

The sfo01-remote-collectors group appears on the Collector Groups page under the Administration view of the user interface.

Configure the Load Balancer for vRealize Operations Manager in Region A

Configure load balancing for the analytics cluster on the dedicated sfo01m01lb01 NSX Edge services gateway for Region A. The remote collector group for Region A does not require load balancing.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the **Home** menu, select **Networking & Security**.
The vSphere Web Client displays the NSX Home page.
- 3 On the NSX Home page, click **NSX Edges** and select **172.16.11.65** from the **NSX Manager** drop-down menu at the top of the NSX Edges page.
- 4 On the NSX Edges page, double-click the **sfo01m01lb01** NSX edge.
- 5 Configure the load balancing VIP address for analytics cluster.
 - a On the **Manage** tab, click the **Settings** tab and click **Interfaces**.
 - b Select the **OneArmLB** interface and click the **Edit**.
 - c In the Edit NSX Edge Interface dialog box, click the **Edit** and in the **Secondary IP Addresses** text box enter the **192.168.11.35** VIP address.
 - d Click **OK** to save the configuration.
- 6 Create an application profile.
 - a On the **Manage** tab for the sfo01m01lb01 device, click the **Load Balancer** tab.
 - b Click **Application Profiles**, and click **Add**.
 - c In the New Profile dialog box, configure the profile using the following configuration settings, and click **OK**.

Setting	Value
Name	vrops-https
Type	HTTPS
Enable SSL Passthrough	Selected
Persistence	Source IP
Expires in (Seconds)	1800
Client Authentication	Ignore

7 Create a service monitoring entry.

- a On the **Load Balancer** tab for the of the sfo01m01lb01 device, click **Service Monitoring** and click **Add**.
- b In the New Service Monitor dialog box, configure the health check parameters using the following configuration settings, and click **OK**.

Setting	Value
Name	vrops-443-monitor
Interval	3
Timeout	5
Max Retries	2
Type	HTTPS
Method	GET
URL	/suite-api/api/deployment/node/status
Receive	ONLINE (must be upper case)

8 Add a server pool.

- a On the **Load Balancer** tab of the sfo01m01lb01 device, select **Pools**, and click **Add**
- b In the New Pool dialog box, configure the load balancing profile using the following configuration settings.

Setting	Value
Name	vrops-svr-443
Algorithm	LEASTCONN
Monitors	vrops-443-monitor

- c Under **Members**, click **Add** to add the pool members.
- d In the New Member dialog box, add one member for each node of the analytics cluster and click **OK**.

Setting	Value
Name	<ul style="list-style-type: none"> ■ vrops01svr01a ■ vrops01svr01b ■ vrops01svr01c
IP Address	<ul style="list-style-type: none"> ■ 192.168.11.31 ■ 192.168.11.32 ■ 192.168.11.33
State	Enable
Port	443
Monitor Port	443
Weight	1
Max Connections	8
Min Connections	8

- e In the New Pool dialog box, click **OK**.

- 9 Add a virtual server.
 - a On the **Load Balancer** tab of the sfo01m01lb01 device, select **Virtual Servers** and click **Add**.
 - b In the New Virtual Server dialog box, configure the settings of the virtual server for the analytics cluster and click **OK**.

Setting	Value
Enable Virtual Server	Selected
Application Profile	vrops-https
Name	vrops-svr-443
Description	vRealize Operations Manager Cluster
IP Address	192.168.11.35 Click Select IP Address , select OneArmLB from the drop-down menu and select 192.168.11.35 IP for the virtual NIC.
Protocol	HTTPS
Port	443
Default Pool	vrops-svr-443
Connection Limit	0
Connection Rate Limit	0

You can now connect to the analytics cluster using the public Virtual Server IP address over HTTPS at the **https://vrops01svr01.rainpole.local** address.

- 10 Configure auto-redirect from HTTP to HTTPS requests.

The NSX Edge can redirect users from HTTP to HTTPS without entering another URL in the browser.

- a On the **Load Balancer** tab of the sfo01m01lb01 device, select **Application Profiles** and click **Add**.
- b In the New Profile dialog box, configure the application profile settings and click **OK**.

Setting	Value
Name	vrops-http-redirect
Type	HTTP
HTTP Redirect URL	https://vrops01svr01.rainpole.local/vcops-web-ent/login.action
Persistence	Source IP
Expires in (Seconds)	1800

- c On the **Load Balancer** tab of the sfo01m01lb01 device, select **Virtual Servers** and click **Add**.
- d Configure the settings of the virtual server for HTTP redirects and click **OK**.

Setting	Value
Enable Virtual Server	Selected
Application Profile	vrops-http-redirect
Name	vrops-svr-80-redirect
Description	HTTP Redirect for vRealize Operations Manager
IP Address	192.168.11.35
Protocol	HTTP
Port	80
Default Pool	NONE
Connection Limit	0
Connection Rate Limit	0

You can connect to the analytics cluster at the public Virtual Server IP address over HTTP at the **http://vrops01svr01.rainpole.local** address.

- 11 Verify the pool configuration by examining the pool statistics that reflect the status of the components behind the load balancer.
 - a Log out and log in again to the vSphere Web Client.
 - b From the **Home** menu, select **Networking & Security**.
 - c On the NSX Home page, click **NSX Edges** and select **172.16.11.65** from the **NSX Manager** drop-down menu at the top of the NSX Edges page.
 - d On the NSX Edges page, double-click the **sfo01m01lb01** NSX edge.
 - e On the **Manage** tab, click the **Load Balancer** tab.
 - f Select **Pools** and click **Show Pool Statistics**.
 - g In the Pool and Member Status dialog box, select the **vrops-svr-443** pool.
 - h Verify that the load balancer pool is up.

Add an Authentication Source for the Active Directory in Region A

Connect vRealize Operations Manager to the Active Directory of the SDDC for central user management and access control.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vrops_admin_password

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Access** and click **Authentication Sources**.

- 4 On the Authentication Sources page, click the **Add**.
- 5 In the Add Source for User and Group Import dialog box, enter the settings for the rainpole.local and sfo01.rainpole.local Active Directories, and click **OK**.

Active Directory Settings	rainpole.local Value	sfo01.rainpole.local Value
Source Display Name	RAINPOLE.LOCAL	SFO01.RAINPOLE.LOCAL
Source Type	Active Directory	Active Directory
Integration Mode	Basic	Basic
Domain/Subdomain	RAINPOLE.LOCAL	SFO01.RAINPOLE.LOCAL
Use SSL/TLS	Deselected	Deselected
User Name	svc-vrops@rainpole.local	svc-vrops@rainpole.local
Password	<i>svc-vrops_password</i>	<i>svc-vrops_password</i>
Settings under the Details section		
Automatically synchronize user membership for configured groups	Selected	Selected
Host	dc01rpl.rainpole.local	dc01sfo.sfo01.rainpole.local
Port	3268	389
Base DN	dc=RAINPOLE,dc=LOCAL	dc=SFO01,dc=RAINPOLE,dc=LOCAL
Common Name	userPrincipalName	userPrincipalName

- 6 Click the **Test** button to test the connection to the domain controller and in the Info dialog click **OK**.
- 7 In the Add Source for User and Group Import dialog box, click **OK**.

The users and user groups in the two Active Directories are added to vRealize Operations Manager.

Configure User Access in vSphere for Integration with vRealize Operations Manager in Region A

Configure operations service accounts with permissions that are required to enable vRealize Operations Manager access to monitoring data on the Management vCenter Server and Compute vCenter Server in Region A.

You associate the `svc-vrops-xxx` service accounts in the Active Directory with user roles that have certain privileges and you assign the users to the vCenter Server instanced in the inventory.

Procedure

- 1 [Define a User Role in vSphere for Storage Devices Adapters in vRealize Operations Manager for Region A](#) on page 278
In vSphere, create a user role with privileges that are required for collecting data about storage devices and vSAN health in vRealize Operations Manager.
- 2 [Configure User Privileges in vSphere for Integration with vRealize Operations Manager for Region A](#) on page 278
Assign global permissions in Region A to the operations service accounts in order to access monitoring data from the Management vCenter Server and Compute vCenter Server in Region A with vRealize Operations Manager.

Define a User Role in vSphere for Storage Devices Adapters in vRealize Operations Manager for Region A

In vSphere, create a user role with privileges that are required for collecting data about storage devices and vSAN health in vRealize Operations Manager.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 On the Home page of the vSphere Web Client, click **Roles** under Administration.
- 3 Create a new role for collecting storage device data.
 - a On the Roles page, click the **Create role action** icon.
 - b In the Create Role dialog box, configure the role using the following configuration settings, and click **OK**.

Setting	Value
Role name	MPSD Metrics User
Privilege	<ul style="list-style-type: none"> ■ Host.CIM.CIM interaction ■ Host.Configuration.Storage partition configuration ■ Profile-driven storage.Profile-driven storage view ■ Storage views.View

This role inherits the **System.Anonymous**, **System.View**, and **System.Read** privileges.

- 4 The Management vCenter Server for Region A propagates the role to the other linked vCenter Server instances.

Configure User Privileges in vSphere for Integration with vRealize Operations Manager for Region A

Assign global permissions in Region A to the operations service accounts in order to access monitoring data from the Management vCenter Server and Compute vCenter Server in Region A with vRealize Operations Manager.

- The svc-vrops-vmware and svc-vrops-nsx users have read-only access on all objects in vCenter Server.
- The svc-vrops-mpsdc and svc-vrops-vsan users have rights that are specifically required for access to storage device and VSAN information, respectively, in vRealize Operations Manager on all objects in vCenter Server.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the **Home** menu, select **Administration**.
- 3 Assign global permissions to the following service accounts according to their roles.

User	Role
svc-vrops-vsphere@rainpole.local	Read-only
svc-vrops-nsx@rainpole.local	Read-only
svc-vrops-mpsd@rainpole.local	MPSD Metrics User
svc-vrops-vsan@rainpole.local	MPSD Metrics User

- a Click **Global Permissions** under Access Control.
- b Click **Add permission** on the **Manage** tab.
- c In the Global Permissions Root - Add Permission dialog box, click **Add** to associate a user or a group with a role.
- d In the Select Users/Groups dialog box, from the **Domain** drop-down menu, select **rainpole.local**, in the filter box type **svc-vrops**, and press Enter.
- e From the list of users and groups, select **svc-vrops-vsphere**, click **Add**, and click **OK**.
- f In the Global Permissions Root - Add Permission dialog box, from the **Assigned Role** drop-down menu, select **Read-only**, ensure that **Propagate to children** is selected, and click **OK**.
- g Repeat the steps to assign global permissions to the other service accounts.

Add vCenter Adapter Instances to vRealize Operations Manager for Region A

After you deploy the analytics cluster and the remote collector nodes of vRealize Operations Manager in Region A and start vRealize Operations Manager, pair a vCenter Adapter instance with the Management vCenter Server and another adapter instance with the Compute vCenter Server in Region A.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vrops_admin_password

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Solutions**.

- 4 From the solution table on the Solutions page, select the **VMware vSphere** solution, and click the **Configure** icon at the top.

The Manage Solution - VMware vSphere dialog box appears.

- 5 Under Instance Settings, enter the settings for connection to vCenter Server.
 - a If you already have added another vCenter Adapter, click the **Add** icon on the left side to add an adapter settings.
 - b Enter the display name, description and FQDN of the vCenter Server instance.

Setting	Value for Management vCenter Server	Value for Compute vCenter Server
Display Name	vCenter Adapter - sfo01m01vc01	vCenter Adapter - sfo01w01vc01
Description	Management vCenter Server for sfo01	Compute vCenter Server for sfo01
vCenter Server	sfo01m01vc01.sfo01.rainpole.local	sfo01w01vc01.sfo01.rainpole.local

- c Click the **Add** icon on the right side, configure the collection credentials for connection to the vCenter Server instances, and click **OK**.

vCenter Server Credentials	
Attribute	Value
Credential name	■ vCenter Adapter Credentials - sfo01m01vc01
	■ vCenter Adapter Credentials - sfo01w01vc01
User Name	svc-vrops-vsphere@rainpole.local
Password	svc-vrops-vsphere-password

- d Leave **Enable Actions** set to **Enable** so that vCenter Adapter can run actions on objects in the vCenter Server from vRealize Operations Manager.
 - e Click **Test Connection** to validate the connection to the vCenter Server instance.
The vCenter Server certificate appears.
 - f In the Review and Accept Certificate dialog box, verify the certificate information and click **Accept**.
 - g Click **OK** in the Info dialog box.
 - h Expand the **Advanced Settings** section of settings.
 - i From the **Collectors/Groups** drop-down menu, select the **sfo01-remote-collectors** group.
 - j Specify a user account with administrator privileges to register vRealize Operations Manager with the vCenter Server instance.

Setting	Value
Registration user	administrator@vsphere.local
Registration password	vsphere_admin_password

- 6 Define the goals for vSphere monitoring.
 - a Click **Define Monitoring Goals**.
 - b In the Define Monitoring Goals dialog box, under Enable vSphere Hardening Guide Alerts?, select **Yes**, leave the default configuration for the other options, and click **Save**.
 - c Click **OK** in the Success dialog box.
- 7 Click **Save Settings**.
- 8 In the Info dialog box, click **OK**.

- 9 Repeat [Step 5](#) to [Step 8](#) for the Compute vCenter Server.
- 10 In the Manage Solution - VMware vSphere dialog box, click **Close**.
- 11 On the Solutions page, select **VMware vSphere** from the solution table to view the collection state and collection status of the adapters.

The collection state indicates whether the adapter should be collecting data. The collection status value indicates whether vRealize Operations Manager is receiving data about a certain object type. An adapter instance has a status value only if its collection state is **Collecting**.

The **Collection State** column for the vCenter Adapters displays **Collecting**, and the **Collection Status** column displays **Data receiving**.

Connect vRealize Operations Manager to the NSX Managers in Region A

Install and configure the vRealize Operations Management Pack for NSX for vSphere to monitor the NSX networking services deployed in each vSphere cluster and view the vSphere hosts in the NSX transport zones. You can also access end to end logical network topologies between any two virtual machines or NSX objects for better visibility into logical connectivity. Physical host and network device relationship in this view also helps in isolating problems in the logical or physical network.

Procedure

- 1 [Install the vRealize Operations Manager Management Pack for NSX for vSphere in Region A](#) on page 282
Install the .pak file for the management pack for NSX for vSphere to add the solution entry and adapters to vRealize Operations Manager.
- 2 [Configure User Privileges in NSX Manager for Integration with vRealize Operations Manager in Region A](#) on page 283
Assign the permissions to the service account svc-vrops-nsx that are required to access monitoring data from the Management NSX Manager and Compute NSX Manager in Region A in vRealize Operations Manager.
- 3 [Add NSX-vSphere Adapter Instances to vRealize Operations Manager for Region A](#) on page 284
After you install the management pack, configure NSX-vSphere Adapters: one for the NSX Manager for the management cluster and one for the NSX Manager for the shared edge and compute cluster.
- 4 [Add Network Devices Adapter to vRealize Operations Manager for Region A](#) on page 286
Configure a Network Devices Adapter to monitor the switches and routers in your environment, and view related alerts, metrics and object capacity.

Install the vRealize Operations Manager Management Pack for NSX for vSphere in Region A

Install the .pak file for the management pack for NSX for vSphere to add the solution entry and adapters to vRealize Operations Manager.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrops_admin_password</i>

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Solutions**.
- 4 On the Solutions page, click the **Add** icon.
- 5 On the Select Solution page from the Add Solution wizard, browse to the .pak file of the vRealize Operations Manager Management Pack for NSX for vSphere and click **Upload**.

After the NSX management pack file has been uploaded, you see details about the management pack.

- 6 After the upload is complete, click **Next**.
- 7 On the End User License Agreement page, accept the license agreement and click **Next**.

The installation of the management pack starts. You see its progress on the Install page.
- 8 After the installation is complete, click **Finish** on the Install page.

The Management Pack for NSX-vSphere solution appears on the Solutions page of the vRealize Operations Manager user interface.

Configure User Privileges in NSX Manager for Integration with vRealize Operations Manager in Region A

Assign the permissions to the service account `svc-vrops-nsx` that are required to access monitoring data from the Management NSX Manager and Compute NSX Manager in Region A in vRealize Operations Manager.

Procedure

- 1 Log in to the NSX Manager by using a Secure Shell (SSH) client.
 - a Open an SSH connection to the NSX Manager virtual machine.

NSX Manager	Host name
NSX Manager for the management cluster	sfo01m01nsx01.sfo01.rainpole.local
NSX Manager for the shared compute and edge cluster	sfo01w01nsx01.sfo01.rainpole.local

- b Log in using the following credentials.

Setting	Value
User name	admin
Password	<ul style="list-style-type: none"> ■ <code>mgmtnsx_admin_password</code> ■ <code>compnsx_admin_password</code>

- 2 Create the local service account `svc-vrops-nsx` on the NSX Manager instances.
 - a Run the following command to switch to Privileged mode of the NSX Manager.

```
enable
```
 - b Enter the admin password when prompted and press Enter.
 - c Switch to Configuration mode.

```
configure terminal
```
 - d Create the service account `svc-vrops-nsx`.

```
user svc-vrops-nsx password plaintext svc-vrops-nsx_password
```
 - e Assign the `svc-vrops-nsx` user access to NSX Manager from the vSphere Web Client.

```
user svc-vrops-nsx privilege web-interface
```
 - f Exit Configuration mode.

```
exit
```
 - g Commit these updates to the NSX Manager.

```
copy running-config startup-config
```
- 3 Assign the `security_admin` role to the `svc-vrops-nsx` service account.
 - a Log in to the Windows host that has access to your data center.
 - b In a Chrome Web browser, start the Postman application and log in.
 - c Select **POST** from the drop-down menu that contains the HTTP request methods.

- d In the URL text box next to the selected method, enter the following URL.

NSX Manager	POST URL
NSX Manager for the management cluster	https://sfo01m01nsx01.sfo01.rainpole.local/api/2.0/services/usermgmt/role/svc-vrops-nsx?isCli=true
NSX Manager for the shared edge and compute cluster	https://sfo01w01nsx01.sfo01.rainpole.local/api/2.0/services/usermgmt/role/svc-vrops-nsx?isCli=true

- e On the **Authorization** tab, configure the following authorization settings and click **Update Request**.

Setting	Value
Type	Basic Auth
User name	admin
Password	<div>■ <i>mgmtnsx_admin_password</i></div> <div>■ <i>compnsx_admin_password</i></div>

- f On the **Headers** tab, enter the following header details.

Setting	Value
Key	Content-Type
Value	Application/xml

- g In the Body tab, select **raw** and paste the following request body in the **Body** text box and click **Send**.

```
<accessControlEntry>
  <role>security_admin</role>
  <resource>
    <resourceId>globalroot-0</resourceId>
  </resource>
</accessControlEntry>
```

The Status changes to 204 No Content.

- 4 Repeat the procedure for the other NSX Manager.

Add NSX-vSphere Adapter Instances to vRealize Operations Manager for Region A

After you install the management pack, configure NSX-vSphere Adapters: one for the NSX Manager for the management cluster and one for the NSX Manager for the shared edge and compute cluster.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrops_admin_password</i>

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Solutions**.

- 4 On the Solutions page, select **Management Pack for NSX-vSphere** from the solution table, and click **Configure**.
- 5 In the Manage Solution - Management Pack for NSX-vSphere dialog box, from the **Adapter Type** table at the top, select **NSX-vSphere Adapter**.
- 6 Under Instance Settings, enter the settings for connection to the NSX Manager for the management cluster or to the NSX Manager for the shared edge and compute cluster.
 - a If you already have added another NSX-vSphere Adapter, click the **Add** icon to add an adapter settings.
 - b Enter the display name, the FQDN of the NSX Manager, and the FQDN of the vCenter Server instance that is connected to the NSX Manager.

Setting	Value for the NSX Manager for the Management Cluster	Value for the NSX Manager for the Shared Edge and Compute Cluster
Display Name	NSX Adapter - sfo01m01nsx01	NSX Adapter - sfo01w01nsx01
Description	Management NSX Manager for sfo01	Compute NSX Manager for sfo01
NSX Manager Host	sfo01m01nsx01.sfo01.rainpole.local	sfo01w01nsx01.sfo01.rainpole.local
VC Host	sfo01m01vc01.sfo01.rainpole.local	sfo01w01vc01.sfo01.rainpole.local
Enable Log Insight integration if configured	false	false

- c Click the **Add** icon next to the **Credential** text box, configure the credentials for the connection to NSX Manager and vCenter Server, and click **OK**.

Setting	Value for the NSX Manager for the Management Cluster	Value for the NSX Manager for the Shared Edge and Compute Cluster
Credential name	NSX Adapter Credentials - sfo01m01nsx01	NSX Adapter Credentials - sfo01w01nsx01
NSX Manager User Name	svc-vrops-nsx	svc-vrops-nsx
NSX Manager Password	<i>svc-vrops-nsx_password</i>	<i>svc-vrops-nsx_password</i>
vCenter User Name	svc-vrops-nsx@rainpole.local	svc-vrops-nsx@rainpole.local
vCenter Password	<i>svc-vrops-nsx_password</i>	<i>svc-vrops-nsx_password</i>

- d Click **Test Connection** to validate the connection to the NSX Manager instance.
The NSX Manager certificate appears.
 - e In the Review and Accept Certificate dialog box, verify the certificate information and click **Accept**.
 - f Click **OK** in the Info dialog.
 - g Expand the Advanced Settings section of settings.
 - h From the **Collectors/Groups** drop-down menu, select the **sfo01-remote-collectors** remote collector group.
 - i Click **Save Settings**.
 - j Click **OK** in the Info dialog box that appears.
 - k Repeat the steps to create an NSX-vSphere Adapter for the other NSX Manager.

- 7 In the Manage Solution - Management Pack for NSX-vSphere dialog box, click **Close**.

The NSX-vSphere Adapters appear on the Solutions page of the vRealize Operations Manager user interface. The **Collection State** of the adapters is Collecting and the **Collection Status** is Data receiving.

Add Network Devices Adapter to vRealize Operations Manager for Region A

Configure a Network Devices Adapter to monitor the switches and routers in your environment, and view related alerts, metrics and object capacity.

The Network Devices Adapter collects data across all vCenter Server instances that you monitor by using vRealize Operations Manager. In a multi-region environment, you use a single adapter instance to access data for all regions.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrops_admin_password</i>

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Solutions**.
- 4 On the Solutions page, select the **Management Pack for NSX-vSphere** from the solution table, and click **Configure**.
- 5 In Manage Solution - Management Pack for NSX-vSphere dialog box, from the **Adapter Type** table at the top, select **Network Devices Adapter**.

- 6 Under **Instance Settings**, enter the settings for SNMP connection to the network devices for the management cluster.
 - a Enter the display name, SNMP version and credentials.

Setting	Value
Display Name	Network Devices Adapter
Description	Global Network Devices Adapter
SNMP Ports	161
SNMP Version	SNMPv2
SNMPv3 Privacy Protocol	AES
SNMPv3 Authentication Protocol	MD5

- b Click the **Add** icon, and configure the credentials for connecting the Network Devices Adapter to the network devices, and click **OK**.

Credential	Value
Credential Kind	SNMPv1, SNMPv2 Credential
Credential Name	Network Devices Credentials
SNMP Read Community Strings	public

For SNMPv1 and SNMPv2 devices, enter a comma-separated list of community names (default is public). For SNMPv3 devices, provide SNMPv3 credentials in addition to the settings for SNMPv1 and SNMPv2.

- c Click **Test Connection** to verify the settings, and if the test is successful click the **OK** button.
 - d Expand the **Advanced Settings** section of settings, and verify that the **Collectors/Groups** option is set to **Default collector group**.
 - e Click **Save Settings**.
 - f Click **OK** in the Info dialog box that appears.
- 7 In the Manage Solution - Management Pack for NSX-vSphere dialog box, click **Close**.

The Network Devices Adapter appears on the Solutions page of the vRealize Operations Manager user interface. The adapter is collecting data about the network devices in all regions of the SDDC. The **Collection State** of the adapter is Collecting and the **Collection Status** is Data receiving.

Connect vRealize Operations Manager to vRealize Automation in Region A

Install and configure the vRealize Operations Manager Management Pack for vRealize Automation to monitor the health and capacity risk of your cloud infrastructure in the context of the tenant's business groups.

Procedure

- 1 [Configure Collection of Metrics from vRealize Automation in vRealize Operations Manager in Region A](#) on page 288

Connect vRealize Automation to vRealize Operations Manager for collecting statistics about the tenant workloads that are provisioned by using vRealize Automation.

- 2 [Configure Integration of vRealize Operations Manager with vRealize Automation for Workload Reclamation in Region A](#) on page 291

Connect vRealize Automation with vRealize Operations Manager to collect metrics that vRealize Automation can use to identify tenant workloads for reclamation in Region A. Such workloads have low use of CPU, memory use, or disk space.

Configure Collection of Metrics from vRealize Automation in vRealize Operations Manager in Region A

Connect vRealize Automation to vRealize Operations Manager for collecting statistics about the tenant workloads that are provisioned by using vRealize Automation.

Procedure

- 1 [Configure User Privileges on vRealize Automation for Integration with vRealize Operations Manager in Region A](#) on page 288

Assign the permissions that are required to access monitoring data from the vRealize Automation in vRealize Operations Manager to the svc-vrops-vra operations service account. The svc-vrops-vra user has rights that are specifically required for access to vRealize Automation in vRealize Operations Manager.

- 2 [Add vRealize Automation Adapter to vRealize Operations Manager for Region A](#) on page 289

Configure a vRealize Automation adapter to collect monitoring data from vRealize Automation.

Configure User Privileges on vRealize Automation for Integration with vRealize Operations Manager in Region A

Assign the permissions that are required to access monitoring data from the vRealize Automation in vRealize Operations Manager to the svc-vrops-vra operations service account. The svc-vrops-vra user has rights that are specifically required for access to vRealize Automation in vRealize Operations Manager.

Procedure

- 1 Log in to the vRealize Automation portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator
Password	<i>vra_administrator_password</i>
Domain	vsphere.local

- 2 On the **Tenants** tab, click the **Rainpole** tenant.
- 3 Click the **Administrators** tab to assign tenant administrator and IaaS administrator roles to the svc-vrops-vra service account.
 - a Enter **svc-vrops-vra** in the **Tenant administrators** search text box, click the **Search** icon, and click **svc-vrops-vra (svc-vrops-vra@rainpole.local)** that shows in the search result list to assign the role to the account.
 - b Enter **svc-vrops-vra** in the **IaaS administrators** search text box, click **Search** icon, and click **svc-vrops-vra (svc-vrops-vra@rainpole.local)** that shows in the search result list to assign the role to the account.
 - c Click **Finish**.
- 4 Log out of the vRealize Automation Default tenant portal.

- 5 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **https://vra01svr01.rainpole.local/vcac/org/rainpole**.
 - b Log in using the following credentials.

Setting	Value
User name	itac-tenantadmin
Password	itac-tenantadmin_password
Domain	Rainpole.local

- 6 Navigate to **Administration > Users & Groups > Directory Users and Groups** to assign the software architect role to the svc-vrops-vra service account.
 - a Enter **svc-vrops-vra** in the search box, click the **Search** icon and click **svc-vrops-vra (svc-vrops-vra@rainpole.local)** user.
 - b The setting of the svc-vrops-vra account appear.
 - c On the **General** tab, select **Infrastructure Architect** and **Software Architect** under Add roles to this User, and click **Finish**.
- 7 Navigate to **Infrastructure > Endpoints > Fabric Groups** to assign the fabric administrator role to the svc-vrops-vra service account.
 - a On the Fabric Groups page, click **SFO Fabric Group**.
 - b On Edit Fabric Group page, enter **svc-vrops-vra** in **Fabric administrators** search text box and click the **Search** icon.
 - c Click **svc-vrops-vra@rainpole.local** in the search result list to assign the fabric administrator role to the account, and click **OK**.

Add vRealize Automation Adapter to vRealize Operations Manager for Region A

Configure a vRealize Automation adapter to collect monitoring data from vRealize Automation.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vrops_admin_password

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Solutions**.
- 4 From the solution table on the Solutions page, select **VMware vRealize Automation** and click **Configure**.

The Manage Solution - VMware vRealize Automation dialog box appears.

- 5 In the Manage Solution - VMware vRealize Automation dialog box, under Instance Settings, enter the settings for connection to vRealize Automation.

- a Enter the display name, description and FQDN of the vRealize Automation front-end portal, and turn data collection on for the Rainpole tenant.

Setting	Value
Display Name	vRealize Automation Adapter - vra01svr01 (Rainpole)
Description	vRealize Automation - Rainpole Tenant
vRealize Automation Appliance URL	https://vra01svr01.rainpole.local

- b Click the **Add** icon next to the **Credential** text box, configure the credentials for connection to vRealize Automation, and click **OK**.

Credential	Value
Credential name	vRA Adapter Credentials - vra01svr01
SysAdmin Username	administrator@vsphere.local
SysAdmin Password	<i>vra_administrator_password</i>
SuperUser Username	svc-vrops-vra@rainpole.local
SuperUser Password	<i>svc_vrops_vra_password</i>

- c Click **Test Connection** to validate the connection to vRealize Automation.
- d In the Review and Accept Certificate dialog box, verify the vRealize Automation certificate information and click **Accept**.
- e Click **OK** in the Info dialog box.
- f Expand the Advanced Settings section, and verify the following configuration.

Advanced Setting	Value
Collectors/Groups	Default collector group
Tenants	rainpole
vRA Endpoint Monitoring	Enabled
Auto Discovery	true

- g Click **Save Settings** and click **OK** in the Info box that appears.

- 6 In the Manage Solution - VMware vRealize Automation dialog box, click **Close**.

The **vRealize Automation Adapter** appears on the Solutions page of the vRealize Operations Manager user interface. The **Collection State** of the adapter is **Collecting** and the **Collection Status** is **Data receiving**.

Configure Integration of vRealize Operations Manager with vRealize Automation for Workload Reclamation in Region A

Connect vRealize Automation with vRealize Operations Manager to collect metrics that vRealize Automation can use to identify tenant workloads for reclamation in Region A. Such workloads have low use of CPU, memory use, or disk space.

Procedure

- 1 [Configure User Privileges on vRealize Operations Manager for Tenant Workload Reclamation in Region A](#) on page 291

Configure read-only privileges for the svc-vra-vrops@rainpole.local service account on vRealize Operations Manager. You configure these privileges so that vRealize Automation can pull metrics from vRealize Operations Manager for reclamation of tenant workloads in Region A.

- 2 [Add vRealize Operations Manager as a Metrics Provider in vRealize Automation](#) on page 292

Integrate vRealize Automation with vRealize Operations Manager to pull metrics for reclamation of tenant workloads.

Configure User Privileges on vRealize Operations Manager for Tenant Workload Reclamation in Region A

Configure read-only privileges for the svc-vra-vrops@rainpole.local service account on vRealize Operations Manager. You configure these privileges so that vRealize Automation can pull metrics from vRealize Operations Manager for reclamation of tenant workloads in Region A.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vrops_admin_password

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, expand **Access**, and click **Access Control**.
- 4 On the Access Control page, click the **User Accounts** tab and click the **Import Users** icon.
- 5 On the Import Users page, import the svc-vra-vrops@rainpole.local service account.
 - a From the **Import From** drop-down menu, select **RAINPOLE.LOCAL**.
 - b Select the **Basic** option for the search query.
 - c In the **Search String** text box, enter **svc-vra-vrops** and click **Search**.
The search results contain the svc-vra-vrops user account.
 - d Select **svc-vra-vrops@rainpole.local** and click **Next**.

- 6 On the Assign Groups and Permissions page, to assign the `ReadOnly` role to the `svc-vra-vrops@rainpole.local` service account, click the **Objects** tab, configure the following settings and click **Finish**.

Setting	Value
Select Role	ReadOnly
Assign this role to the user	Selected
Select Object	vCenter Adapter > vCenter Adapter - sfo01w01vc01

Add vRealize Operations Manager as a Metrics Provider in vRealize Automation

Integrate vRealize Automation with vRealize Operations Manager to pull metrics for reclamation of tenant workloads.

Procedure

- 1 Log in to the vRealize Automation Rainpole portal.
 - a Open a Web browser and go to **`https://vra01svr01.rainpole.local/vcac/org/rainpole`**.
 - b Log in using the following credentials.

Setting	Value
User name	<code>itac-tenantadmin</code>
Password	<code>itac-tenantadmin_password</code>
Domain	<code>Rainpole.local</code>

- 2 Navigate to **Administration > Reclamation > Metrics Provider**.
- 3 On the Metrics Provider page, configure the vRealize Operations Manager settings.
 - a Select **vRealize Operations Manager endpoint**.
 - b Configure the following settings for vRealize Operations Manager.

Setting	Value
URL	<code>https://vrops01svr01.rainpole.local/suite-api/</code>
Username	<code>svc-vra-vrops@rainpole.local</code>
Password	<code>svc-vra-vrops_password</code>

- c Click **Test Connection**, verify that the test connection is successful, and click **Save**.
 - d In the certificate warning message box, click **OK**.

The vSphere metrics provider updated successfully message appears.

Connect vRealize Operations Manager with vRealize Business in Region A

Configure the vRealize Operations Manager Management Pack for vRealize Business to view your infrastructure performance, cost information, and also troubleshooting tips. You can connect vRealize Operations Manager to a single instance of vRealize Business for Cloud.

Configure vRealize Business Adapter in vRealize Operations in Region A

Configure a vRealize Business for Cloud adapter to collect monitoring data from vRealize Business for Cloud.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrops_admin_password</i>

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Solutions**.
- 4 From the solution table on the Solutions page, select **VMware vRealize Business for Cloud** solution, and click **Configure**.
The Manage Solution - VMware vRealize Business for Cloud dialog box appears.
- 5 In the Manage Solution - VMware vRealize Business for Cloud dialog box, under Instance Settings, enter the settings for connection to vRealize Business for Cloud.
 - a Enter the display name, description and FQDN of the vRealize Business for Cloud server.

Setting	Value for vRealize Business for Cloud Server
Display Name	vRealize Business Adapter - vrb01svr01
Description	vRealize Business for Cloud Server
vRealize Business for Cloud server	vrb01svr01.rainpole.local

- b Click **Test Connection** to validate the connection to vRealize Business server instance.
 - c Click **OK** in the Info dialog box.
 - d Expand the **Advanced Settings** section of settings
 - e From the **Collectors/Groups** drop-down menu, make sure that the **Default collector group** is selected.
- 6 Click **Save Settings**.
- 7 Click **OK** in the Info dialog box.
- 8 In the Manage Solution - VMware vRealize Business for Cloud dialog box, click **Close**.

The **vRBC Adapter** appears on the Solutions page of the vRealize Operations Manager user interface. The **Collection State** of the adapter is **Collecting** and the **Collection Status** is **Data receiving**.

Verify Connectivity to vRealize Business for Cloud in Region A

To verify integration of VMware vRealize Business for Cloud with vRealize Operations Manager, run a Private Cloud Reclamation report from the vRealize Operations Manager operations interface. If the integration is interrupted, re-register the Compute vCenter Server in Region A with vRealize Business.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vroops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vroops_admin_password</i>

- 2 On the main navigation bar, click **Home**.
- 3 In the left pane of vRealize Operations Manager, click **Business Management**.
- 4 Log in to vRealize Business using the following credentials.

Setting	Value
User name	itac-tenantadmin
Tenant	rainpole
Password	<i>itac-tenantadmin_password</i>

The dashboard of vRealize Business opens on the Business Management page of the vRealize Operations Manager operations interface.

- 5 On the Business Management page, click **Overview** and locate the Private Cloud Reclamation widget on the right.
- 6 If on running the report, the integration message Cost Savings from Private Cloud reclamation requires integration with vRealize Operations Manager appears, re-register vRealize Business with the Compute vCenter Server in Region A.
 - a Open a Web browser and go to **https://sfo01vrbc01.sfo01.rainpole.local:9443/dc-ui**.
 - b Log in using the following credentials.

Setting	Value
User name	root
Password	<i>vrbc_collector_root_password</i>

- c Click **Manage Private Cloud Connections** and select **vCenter Server**.
- d Select the Compute vCenter Server **sfo01w01vc01.sfo01.rainpole.local** and click the **Delete** icon.
The connection to Compute vCenter Server is removed.
- e Click **Add**.

- f In the Add vCenter Server Connections dialog box, enter the following settings and click **Save**.

Setting	Value
Name	sfo01w01vc01.sfo01.rainpole.local
vCenter Server	sfo01w01vc01.sfo01.rainpole.local
Username	svc-vra@rainpole.local
Password	svc_vra_password

- g In the SSL Certificate dialog box, click **Install**.
- h In the Success dialog box, click **OK**.
- 7 Wait a few minutes for vRealize Business for Cloud to initiate a synchronization, run the report again and verify that it is generated successfully.

Enable Storage Device Monitoring in vRealize Operations Manager in Region A

Install and configure the vRealize Operations Management Pack for Storage Devices to view the storage topology, and to monitor the capacity and problems on storage components.

Procedure

- 1 [Install the vRealize Operations Manager Management Pack for Storage Devices in Region A](#) on page 295
Install the .pak file of the management pack for storage devices to add the management pack as a solution to vRealize Operations Manager.
- 2 [Add Storage Devices Adapters in vRealize Operations Manager for Region A](#) on page 296
After you install the management pack, configure Storage Devices adapter to collect monitoring data about the storage devices in the SDDC.

Install the vRealize Operations Manager Management Pack for Storage Devices in Region A

Install the .pak file of the management pack for storage devices to add the management pack as a solution to vRealize Operations Manager.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vroops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vroops_admin_password

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Solutions**.
- 4 On the Solutions page, click the **Add** icon.
- 5 On the Select Solution page from the Add Solution wizard, browse to the .pak file of the vRealize Operations Manager Management Pack for Storage Devices and click **Upload**.
- 6 After the upload is complete, click **Next**.

- 7 On the End User License Agreement page, accept the license agreement and click **Next**.
The installation of the management pack starts. You see its progress on the Install page.
- 8 After the installation is complete, click **Finish** on the Install page.

The **Management Pack for Storage Devices** solution appears on the Solutions page of the vRealize Operations Manager user interface.

Add Storage Devices Adapters in vRealize Operations Manager for Region A

After you install the management pack, configure Storage Devices adapter to collect monitoring data about the storage devices in the SDDC.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrops_admin_password</i>

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Solutions**.
- 4 On the Solutions page, select **Management Pack for Storage Devices** from the solution table and click **Configure**.

The Manage Solution - Management Pack for Storage Devices dialog box appears.

- 5 Under Instance Settings, enter the settings for connection to the vCenter Server instances.
 - a If you already have added another Storage Devices adapter, click the **Add** icon on the left side to add an adapter settings.
 - b Enter the display name, description, and FQDN of the vCenter Server instance.

Setting	Value for the Management vCenter Server	Value for the Compute vCenter Server
Display Name	Storage Devices Adapter - sfo01m01vc01	Storage Devices Adapter - sfo01w01vc01
Description	Storage Devices in Management vCenter for sfo01	Storage Devices in Compute vCenter for sfo01
vCenter Server	sfo01m01vc01.sfo01.rainpole.local	sfo01w01vc01.sfo01.rainpole.local
SNMP Community Strings	-	-

- c Click the **Add** icon on the right side, configure the collection credentials for connection to the vCenter Server instances, and click **OK**.

vCenter Server Credentials Attribute	Value
Credential name	<ul style="list-style-type: none"> ■ Storage Devices Adapter Credentials - sfo01m01vc01 ■ Storage Devices Adapter Credentials - sfo01w01vc01
User Name	svc-vrops-mpsd@rainpole.local
Password	svc-vrops-mpsd-password

- d Click **Test Connection** to validate the connection to the vCenter Server.
The vCenter Server certificate appears.
- e In the Review and Accept Certificate dialog box, verify the vCenter Server certificate information and click **Accept**.
- f Click **OK** in the Info dialog box.
- g Expand the **Advanced Settings** section of settings.
- h From the **Collectors/Groups** drop-down menu, select the **sfo01-remote-collectors** remote collector group.
- i Click **Save Settings**.
- j Click **OK** in the Info dialog box that appears.
- k Repeat the procedure for the other vCenter Server instance.

- 6 In the Manage Solution - Management Pack for Storage Devices dialog box, click **Close**.

The Storage Devices adapters appear on the Solutions page of the vRealize Operations Manager user interface. The **Collection State** of the adapters is **Collecting** and the **Collection Status** is **Data receiving**.

Enable vSAN Monitoring in vRealize Operations Manager in Region A

Configure the vRealize Operations Management Pack for vSAN to view the vSAN topology, and to monitor the capacity and problems.

Procedure

- 1 [Turn On vSAN Performance Service in Region A](#) on page 297
When you create a vSAN cluster, the performance service is disabled. Turn on vSAN performance service to monitor the performance of vSAN clusters, hosts, disks, and VMs.
- 2 [Add a vSAN Adapter in vRealize Operations Manager in Region A](#) on page 298
Configure the vSAN adapter to collect monitoring data about vSAN usage in the SDDC.

Turn On vSAN Performance Service in Region A

When you create a vSAN cluster, the performance service is disabled. Turn on vSAN performance service to monitor the performance of vSAN clusters, hosts, disks, and VMs.

When you turn on the performance service, vSAN places a Stats database object in the datastore to collect statistical data. The Stats database is a namespace object in the cluster's vSAN datastore.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Enable the vSAN Performance Service.
 - a In the navigator, expand the **sfo01-m01dc** data center object.
 - b Click the **sfo01-m01-mgmt01** cluster object and click the **Configure** tab.
 - c Under vSAN, select **Health and Performance**.
 - d Next to the Performance Service settings, click **Edit**, configure the following settings and click **OK**.

Setting	Value
Turn ON vSAN performance service	Selected
Storage policy	vSAN Default Storage Policy

- 3 If you have a vSAN datastore configured in the shared edge and compute cluster sfo01-w01-comp01, repeat the procedure.

Add a vSAN Adapter in vRealize Operations Manager in Region A

Configure the vSAN adapter to collect monitoring data about vSAN usage in the SDDC.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vroops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vroops_admin_password

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Solutions**.
- 4 On the Solutions page, select **VMware vSAN** from the solution table, and click **Configure**.
The Manage Solution - VMware vSAN dialog box appears.

- 5 Under Instance Settings, enter the settings for the connection to the Management vCenter Server.
 - a If you already have added another vSAN adapter, click the **Add** icon on the left side to add an adapter settings.
 - b Enter the settings for connection to the vCenter Server.

Setting	Value for the Management vCenter
Display Name	vSAN Adapter - sfo01m01vc01
Description	Management vCenter Server vSAN Adapter for sfo01
vCenter Server	sfo01m01vc01.sfo01.rainpole.local

- c Click the **Add** icon next to the **Credential** text box, and configure the credentials for connection to vCenter Server, and click **OK**.

Setting	Value for the Management vCenter
Credential name	vSAN Adapter Credentials - sfo01m01vc01
vCenter User Name	svc-vrops-vsan@rainpole.local
vCenter Password	<i>svc-vrops-vsan-password</i>

- d Click **Test Connection** to validate the connection to vCenter Server.
The vCenter Server certificate appears.
 - e In the Review and Accept Certificate dialog box, verify the vCenter Server certificate information and click **Accept**.
 - f Click **OK** in the Info dialog box.
 - g Expand the **Advanced Settings** section of settings.
 - h From the **Collectors/Groups** drop-down menu, select the **sfo01-remote-collectors** collector group.
 - i Make sure **Auto Discovery** is set to **true**.
 - j Click **Save Settings**.
 - k Click **OK** in the Info dialog box that appears.
- 6 If you have a vSAN datastore configured in the shared edge and compute cluster, repeat [Step 5](#) for the Compute vCenter Server.
- 7 In the Manage Solution - VMware vSAN dialog box, click **Close**.

The vSAN Adapter appears on the Solutions page of the vRealize Operations Manager user interface. The **Collection State** of the adapter is Collecting and the **Collection Status** is Data receiving.

Configure E-Mail Alerts for vRealize Operations Manager in Region A

You configure e-mail notifications in vRealize Operations Manager so that users and applications receive the administrative alerts from vRealize Operations Manager about certain situations in the data center.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrops_admin_password</i>

- 2 On the main navigation bar, click **Administration**.
- 3 In the left pane of vRealize Operations Manager, click **Management** and click **Outbound Settings**.
- 4 On the Outbound Settings page, click the **Add** icon to create an outbound alert instance.
- 5 In the Add/Edit Outbound Instance dialog box, configure the settings for the Standard Email Plug-in, and click **OK**.

Alert Instance Setting	Value
Plugin Type	Standard Email Plugin
Instance Name	SMTP Alert Mail Relay
Use Secure Connection	Selected
SMTP Host	mailserver.rainpole.local
SMTP Port	25
Secure Connection Type	TLS
Sender Email Address	vrops@rainpole.com
Sender Name	vRealize Operations Admin

- 6 Click **Test** to verify the connection with the SMTP server and click **OK**.
- 7 Click **Save**.

Region A vRealize Log Insight Implementation

Deploy vRealize Log Insight in a cluster configuration of three nodes with an integrated load balancer: one master and two worker nodes.

Procedure

- 1 [Deploy vRealize Log Insight in Region A](#) on page 301
Start the deployment of vRealize Log Insight in Region A by deploying the master and worker nodes and forming the vRealize Log Insight cluster.
- 2 [Replace the Certificate of vRealize Log Insight in Region A](#) on page 309
You can obtain the CA-signed vRealize Log Insight PEM certificate chain file that contains the own certificate, the signer certificate and the private key file by using the CertGenVVD tool.
- 3 [Connect vRealize Log Insight to the vSphere Environment in Region A](#) on page 310
Start collecting log information about the ESXi and vCenter Server instances in the SDDC.

- 4 [Connect vRealize Log Insight to vRealize Operations Manager in Region A](#) on page 316
Connect vRealize Log Insight to vRealize Operations Manager so that you can use the Launch in Context functionality between the two application to troubleshoot vRealize Operations Manager by using dashboards and alerts in the vRealize Log Insight user interface.
- 5 [Connect vRealize Log Insight to the NSX Instances in Region A](#) on page 323
Install and configure the vRealize Log Insight Content Pack for NSX for vSphere for log visualization and alerting of the NSX for vSphere real-time operation. You can use the NSX-vSphere dashboards to monitor logs about installation and configuration, and about virtual networking services.
- 6 [Connect vRealize Log Insight to vRealize Automation in Region A](#) on page 330
Connect the vRealize Log to vRealize Automation to receive log information from all components of vRealize Automation in the vRealize Log Insight UI.
- 7 [Install the Linux Content Pack and Configure the Virtual Appliance Agent Group for vRealize Log Insight for Region A.](#) on page 340
Install the content pack for VMware Linux to add the dashboards for viewing log information about the management virtual appliances in vRealize Log Insight.
- 8 [Configure Log Retention and Archiving in Region A](#) on page 341
Set log retention to one week and archive logs for 90 days according to the *VMware Validated Design Architecture and Design* documentation.

Deploy vRealize Log Insight in Region A

Start the deployment of vRealize Log Insight in Region A by deploying the master and worker nodes and forming the vRealize Log Insight cluster.

Procedure

- 1 [Prerequisites for Deploying vRealize Log Insight in Region A](#) on page 302
Before you deploy vRealize Log Insight, verify that your environment satisfies the requirements for this deployment.
- 2 [Deploy the Virtual Appliance for Each Node in the vRealize Log Insight Cluster in Region A](#) on page 303
Use the vSphere Web Client to deploy each vRealize Log Insight node as a virtual appliance on the management cluster in Region A.
- 3 [Configure a DRS Anti-Affinity Rule for vRealize Log Insight in Region A](#) on page 305
To protect the vRealize Log Insight cluster from a host-level failure, configure vSphere DRS to run the worker virtual appliances on different hosts in the management cluster.
- 4 [Start the vRealize Log Insight Master Node in Region A](#) on page 306
Configure and start the vRealize Log Insight master node. Before you form a cluster by adding the worker nodes, vRealize Log Insight must be running.
- 5 [Join the Worker Nodes to vRealize Log Insight in Region A](#) on page 307
After you deploy the virtual appliances for vRealize Log Insight and start the vRealize Log Insight instance on the master node, join the two worker nodes to form a cluster.
- 6 [Enable the Integrated Load Balancer of vRealize Log Insight in Region A](#) on page 308
After you join the master and the worker nodes to create a vRealize Log Insight cluster, enable the Integrated Load Balancer (ILB) for balancing incoming ingestion traffic of syslog data among the Log Insight nodes and for high availability.

7 [Join vRealize Log Insight to the Active Directory in Region A](#) on page 309

To use user roles in vRealize Log Insight that are maintained centrally and are inline with the other solutions in the SDDC, enable Active Directory support.

Prerequisites for Deploying vRealize Log Insight in Region A

Before you deploy vRealize Log Insight, verify that your environment satisfies the requirements for this deployment.

IP Addresses and Host Names

Verify that static IP addresses and FQDNs for the vRealize Log Insight are available in the application virtual network for Region A.

For the application virtual network, allocate 3 static IP addresses for the vRealize Log Insight nodes and one IP address for the integrated load balancer. Map host names to the IP addresses.

NOTE Region A must be routable via the vSphere management network.

Table 4-4. IP Addresses and Host Names for the vRealize Log Insight Instance in Region A

Role	IP Address	FQDN
Integrated load balancer VIP address	192.168.31.10	sfo01vrli01.sfo01.rainpole.local
Master node	192.168.31.11	sfo01vrli01a.sfo01.rainpole.local
Worker node 1	192.168.31.12	sfo01vrli01b.sfo01.rainpole.local
Worker node 2	192.168.31.13	sfo01vrli01c.sfo01.rainpole.local
Default gateway	192.168.31.1	-
DNS server	■ 172.16.11.5 ■ 172.16.11.4	-
Subnet mask	255.255.255.0	-
NTP servers	■ 172.16.11.251 ■ 172.16.11.252 ■ 172.17.11.251 ■ 172.17.11.252	■ ntp.sfo01.rainpole.local ■ ntp.lax01.rainpole.local

Deployment Prerequisites

Verify that your environment satisfies the following prerequisites to deploying vRealize Log Insight.

Prerequisite	Value
Storage	<ul style="list-style-type: none"> ■ Virtual disk provisioning. <ul style="list-style-type: none"> ■ Thin ■ Required storage per node <ul style="list-style-type: none"> ■ Initial storage for node deployment: 510 GB ■ Required storage for cluster archiving <ul style="list-style-type: none"> ■ Initial storage for archiving: 400 GB
Software Features	<ul style="list-style-type: none"> ■ Verify that vCenter Server is operational. ■ Verify that the vSphere cluster has DRS and HA enabled. ■ Verify that the Management NSX Manager is operational. ■ Verify that vRealize Operations Manager is operational. ■ Verify that the application virtual network for the 3-node vRealize Log Insight cluster is available. ■ Verify that vRealize Automation is operational. ■ Verify that vRealize Business for Cloud is operational. ■ Verify that Postman REST API application is installed in your Chrome browser. ■ Verify the following NFS datastore requirements: <ul style="list-style-type: none"> ■ Create an NFS share of 400 GB in Region and export it as /V2D_vRLI_MgmtA_400GB. ■ Verify that the NFS server supports NFS v3. ■ Verify that the NFS partition allows read and write operations for guest accounts. ■ Verify that the mount does not require authentication. ■ Verify that the NFS share is directly accessible to vRealize Log Insight ■ If using a Windows NFS server, allow unmapped user Unix access (by UID/GID).
Installation Package	Download the .ova file of the vRealize Log Insight virtual appliance on the machine where you use the vSphere Web Client.
License	Obtain a license that covers the use of vRealize Log Insight.
Active Directory	Verify that you have a parent and child Active Directory domain controllers configured with the role-specific SDDC users and groups for the <code>rainpole.local</code> domain.
Certification Authority	Configure the Active Directory domain controller as a certificate authority for the environment.
E-mail account	Provide an email account to send vRealize Log Insight notifications from.

Deploy the Virtual Appliance for Each Node in the vRealize Log Insight Cluster in Region A

Use the vSphere Web Client to deploy each vRealize Log Insight node as a virtual appliance on the management cluster in Region A.

You deploy three vRealize Log Insight nodes - one master node and two worker nodes.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **`https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Navigate to the `sfo01m01vc01.sfo01.rainpole.local` vCenter Server object.
- 3 Right-click `sfo01m01vc01.sfo01.rainpole.local` and select **Deploy OVF Template**.

- 4 On the Select source page, select **Local file**, click **Browse**, browse to the location of the vRealize Log Insight .ova file on your local file system, and click **Next**.
- 5 On the Select name and folder page, make the following selections, and click **Next**.
 - a Enter a name for the node according to its role.

Name	Value
sfo01vrli01a	Master node
sfo01vrli01b	Worker node 1
sfo01vrli01c	Worker node 2

- b Select the inventory folder for the virtual appliance.

Setting	Value
vCenter Server	sfo01m01vc01.sfo01.rainpole.local
Data center	sfo01-m01dc
Folder	sfo01-m01fd-vrli

- 6 On the Select a resource page, select the **sfo01-m01-mgmt01** management cluster as the resource to run the virtual appliance on, and click **Next**.

Setting	Value
Data center	sfo01-m01dc
Cluster	sfo01-m01-mgmt01

- 7 On the Review details page, examine the virtual appliance details, such as product, version, download size, and disk size, and click **Next**.
- 8 On the Accept License Agreements page, click **Accept** to accept the end user license agreements and click **Next**.
- 9 On the Select configuration page, from the **Configuration** drop-down menu, select the **Medium** deployment configuration, and click **Next**.
- 10 On the Select storage page, select the following datastore, configure its settings, and click **Next**.

Setting	Value
Select virtual disk format	Thin provision
VM Storage Policy	vSAN Default Storage Policy
Datastore	sfo01-m01-vsan01

- 11 On the Setup networks page, select the distributed port group on the sfo01-m01-vds01 distributed switch that ends with **Mgmt-RegionA01-VXLAN**, and click **Next**.

- 12 On the Customize template page, set networking settings and the root user credentials for the virtual appliance.

- a In the Networking Properties section, configure the following networking settings:

Setting	Value
DNS	172.16.11.5,172.16.11.4
DNS domain	sfo01.rainpole.local
DNS searchpath	sfo01.rainpole.local,rainpole.local
Default gateway	192.168.31.1
Host name	<ul style="list-style-type: none"> ■ sfo01vrli01a.sfo01.rainpole.local for the master node ■ sfo01vrli01b.sfo01.rainpole.local for the worker node 1 ■ sfo01vrli01c.sfo01.rainpole.local for the worker node 2
Network 1 IP Address	<ul style="list-style-type: none"> ■ 192.168.31.11 for the master node ■ 192.168.31.12 for the worker node 1 ■ 192.168.31.13 for the worker node 2
Network 1 Netmask	255.255.255.0

- b In the Other Properties section, enter and confirm a password for the root user.

The password must contain at least 8 characters, and must include:

- One uppercase character
- One lowercase character
- One digit
- One special character

Use this password when you log in to the console of the vRealize Log Insight virtual appliance.

- c Click **Next**.

- 13 On the Ready to complete page, click **Finish**.

The deployment of the virtual appliance starts.

- 14 Right-click the virtual appliance object and select **Power > Power On**.

- 15 Repeat the procedure to deploy the vRealize Log Insight virtual appliance for the next node in the cluster.

Configure a DRS Anti-Affinity Rule for vRealize Log Insight in Region A

To protect the vRealize Log Insight cluster from a host-level failure, configure vSphere DRS to run the worker virtual appliances on different hosts in the management cluster.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **<https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client>**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- 2 Navigate to the sfo01m01vc01.sfo01.rainpole.local vCenter Server object, and under the sfo01-m01dc data center object select the **sfo01-m01-mgmt01** cluster.

- 3 On the **Configure** tab, select **VM/Host Rules**.
- 4 In the VM/Host Rules list, click **Add** above the rules list, add a new anti-affinity rule using the following details, and click **OK**.

Rule Attribute	Value
Name	anti-affinity-rule-vrli
Enable rule	Yes
Type	Separate Virtual Machines
Members	<ul style="list-style-type: none"> ■ sfo01vrli01a ■ sfo01vrli01b ■ sfo01vrli01c

Start the vRealize Log Insight Master Node in Region A

Configure and start the vRealize Log Insight master node. Before you form a cluster by adding the worker nodes, vRealize Log Insight must be running.

Procedure

- 1 Open a Web browser and go to **<http://sfo01vrli01a.sfo01.rainpole.local>**.
The initial configuration wizard opens.
- 2 On the Setup page, click **Next**.
- 3 On the Choose Deployment Type page, click **Start New Deployment**.
- 4 After the deployment is launched, on the Admin Credentials page, set the email address and the password of the admin user, and click **Save and Continue**.
The password must be at least 8 characters long, and must contain one uppercase character, one lowercase character, one number, and one special character.
- 5 On the License page, enter the license key, click **Add New License Key**, and click **Continue**.
- 6 On the General Configuration page, enter the following settings and click **Save and Continue**.

Setting	Value
Email System Notifications to	<i>email_address_to_receive_system_notifications</i>
Send HTTP Post System Notifications To	https://sfo01vrli01.sfo01.rainpole.local

- 7 On the Time Configuration page, enter the following settings, click **Test** and click **Save and Continue**.

Setting	Value
Sync Server Time With	NTP Server (recommended)
NTP Servers	ntp.sfo01.rainpole.local , ntp.lax01.rainpole.local

- 8 On the SMTP Configuration page, specify the properties of an SMTP server to enable outgoing alerts and system notification emails, and to test the email notification.
 - a Set the connection setting for the SMTP server that will send the email messages from vRealize Log Insight. Contact your system administrator for details about the email server.

SMTP Option	Description
SMTP Server	FQDN of the SMTP server
Port	Server port for SMTP requests
SSL (SMTPS)	Sets whether encryption should be enabled for the SMTP transport option connection.
STARTTLS Encryption	Enable or disable the STARTTLS encryption.
Sender	Address that appears as the sender of the email.
Username	User name on the SMTP server
Password	Password for the SMTP server you specified in Username

- b To verify that the SMTP configuration is correct, type a valid email address and click **Send Test Email** .

vRealize Log Insight sends a test email to the address that you provided.
- 9 On the Setup Complete page, click **Finish**.

vRealize Log Insight starts operating in standalone mode.

Join the Worker Nodes to vRealize Log Insight in Region A

After you deploy the virtual appliances for vRealize Log Insight and start the vRealize Log Insight instance on the master node, join the two worker nodes to form a cluster.

Procedure

- 1 For each worker node appliance, go to the initial setup UI in your Web browser.

Worker Node	HTTP URL
Worker node 1	https://sfo01vrli01b.sfo01.rainpole.local
Worker node 2	https://sfo01vrli01c.sfo01.rainpole.local

The initial configuration wizard opens.

- 2 Click **Next** on the Welcome page.
- 3 On the Choose Deployment Type page, click **Join Existing Deployment**.
- 4 On the Join Existing Deployment page, enter the master node FQDN **sfo01vrli01a.sfo01.rainpole.local** and click **Go**.

The worker node sends a request to the vRealize Log Insight master node to join the existing deployment.
- 5 After the worker node contacts the master node, click the **Click here to access the Cluster Management page** link.

The login page of the vRealize Log Insight user interface opens.

- 6 Log in to the vRealize Log Insight UI by using the following credentials.

Setting	Value
User name	admin
Password	<i>vrli_admin_password</i>

The Cluster page opens in the Log Insight user interface.

- 7 On the right of the notification message about adding the worker node, click **Allow**

After you join the first worker node to the cluster, the user interface displays a warning message that another worker node must be added.

- 8 Repeat the steps to join the second worker node to the cluster.

After you add the second worker node, the Cluster page of the vRealize Log Insight UI contains the master and worker nodes as components of the cluster.

Enable the Integrated Load Balancer of vRealize Log Insight in Region A

After you join the master and the worker nodes to create a vRealize Log Insight cluster, enable the Integrated Load Balancer (ILB) for balancing incoming ingestion traffic of syslog data among the Log Insight nodes and for high availability.

Procedure

- 1 Log in to the vRealize Log Insight user interface.
 - a Open a Web browser and go to **https://sfo01vrli01a.sfo01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrli_admin_password</i>

- 2 Click the configuration drop-down menu icon  and select **Administration**.
- 3 Under Management, click **Cluster**.
- 4 Under Integrated Load Balancer, click **New Virtual IP Address**.
- 5 In the New Virtual IP dialog box, enter the following settings and click **Save**.

Setting	Value
IP	192.168.31.10
FQDN	sfo01vrli01.sfo01.rainpole.local

Join vRealize Log Insight to the Active Directory in Region A

To use user roles in vRealize Log Insight that are maintained centrally and are inline with the other solutions in the SDDC, enable Active Directory support.

Procedure

- 1 Log in to the vRealize Log Insight user interface.
 - a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrli_admin_password</i>

- 2 On the Authentication page, select the checkbox to enable the support for Active Directory and configure the Active Directory settings.
 - a Configure the Active Directory connection settings according to the details from your IT administrator.

Setting	Value
Enable Active Directory support	Selected
Default Domain	rainpole.local
Domain Controller(s)	dc01rpl.rainpole.local
User Name	svc-vrli
Password	<i>svc_vrli_password</i>
Connection Type	Standard
Require SSL	Yes or No according to the instructions from the IT administrator

- b Click **Test Connection** to verify the connection, and click **Save**.

Replace the Certificate of vRealize Log Insight in Region A

You can obtain the CA-signed vRealize Log Insight PEM certificate chain file that contains the own certificate, the signer certificate and the private key file by using the CertGenVVD tool.

Procedure

- 1 Log in to the vRealize Log Insight user interface.
 - a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrli_admin_password</i>

- 2 In the vRealize Log Insight user interface, click the configuration drop-down menu icon  and select **Administration**.
- 3 Under Configuration, click **SSL**.

- 4 On the SSL Configuration page, next to **New Certificate File (PEM format)** click **Choose File**, browse to the location of the PEM file on your computer, and click **Save**.

Certificate Generation Option	Certificate File
Using the CertGenVVD tool	vrli.sfo01.2.chain.pem

The certificate is uploaded to vRealize Log Insight.

- 5 Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**
A warning message that the connection is not trusted appears.
- 6 To review the certificate, click the padlock  in the address bar of the browser, and verify that **Subject Alternative Name** contains the names of the vRealize Log Insight cluster nodes.
- 7 Import the certificate in your Web browser.
For example, in Google Chrome under the HTTPS/TLS settings click **Manage certificates**, and in the Certificates dialog box import vrli-chain.pem.
You can also use Certificate Manager on Windows or Keychain Access on MAC OS X.

Connect vRealize Log Insight to the vSphere Environment in Region A

Start collecting log information about the ESXi and vCenter Server instances in the SDDC.

Procedure

- 1 [Configure User Privileges in vSphere for Integration with vRealize Log Insight for Region A](#) on page 311
Assign global permissions in Region A to the service account svc-vrli to collect log information from the vCenter Server instances and ESXi hosts with vRealize Log Insight. The svc-vrli user account is specifically dedicated to collecting log information from vCenter Server and ESXi.
- 2 [Connect vRealize Log Insight to vSphere in Region A](#) on page 313
After you configure the svc-vrli Active Directory user with the vSphere privileges that are required for retrieving log information from the vCenter Server instances and ESXi hosts, connect vRealize Log Insight to vSphere.
- 3 [Configure vCenter Server to Forward Log Events to vRealize Log Insight in Region A](#) on page 314
You can configure each vCenter Server and Platform Services Controller appliance to forward system logs and events to the vRealize Log Insight cluster. You can then view and analyze all syslog information in the vRealize Log Insight web interface.
- 4 [Update the Host Profiles for the Management and Shared Edge and Compute Clusters with Syslog Settings in Region A](#) on page 315
To have a consistent logging configuration across all ESXi hosts in the clusters in Region A, update the host profile in each cluster to accommodate the syslog settings for connection to vRealize Log Insight.

Configure User Privileges in vSphere for Integration with vRealize Log Insight for Region A

Assign global permissions in Region A to the service account svc-vrli to collect log information from the vCenter Server instances and ESXi hosts with vRealize Log Insight. The svc-vrli user account is specifically dedicated to collecting log information from vCenter Server and ESXi.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the **Home** menu, select **Administration**.
- 3 Under Access Control, click **Roles**.

4 Create a role for vRealize Log Insight.

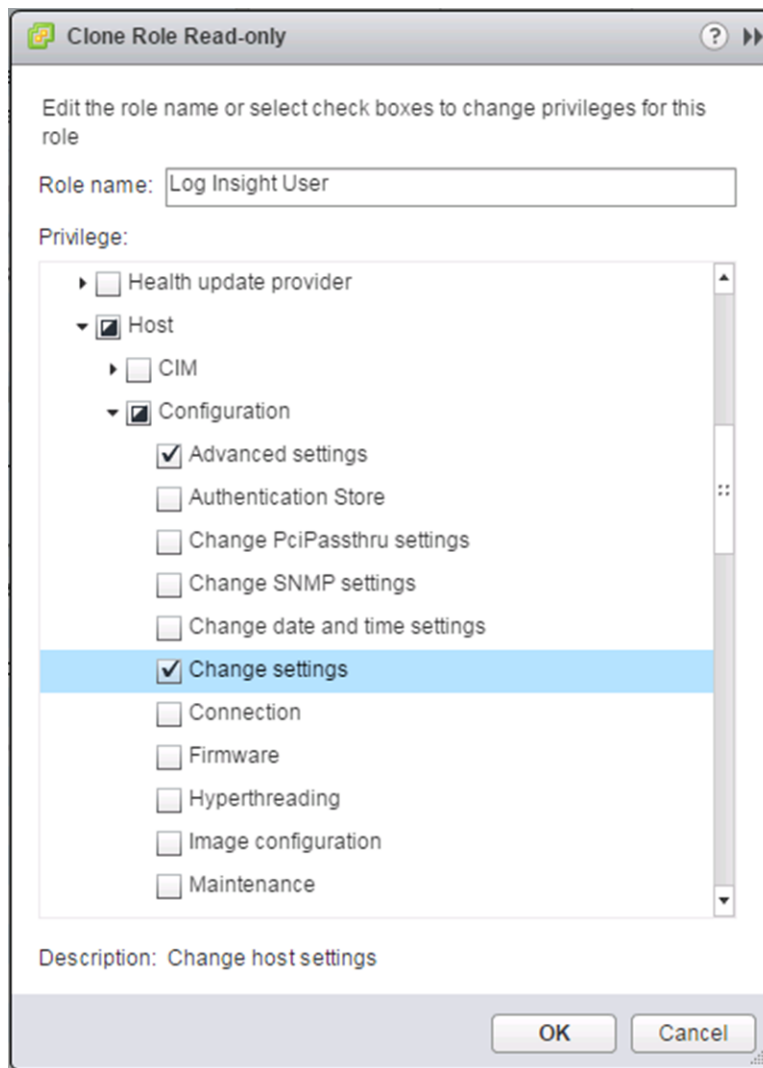

- a Select **Read-only** and click the **Clone** icon.

You clone the Read-only role because it includes the **System.Anonymous**, **System.View**, and **System.Read** privileges. vRealize Log Insight requires those privileges for accessing log information related to the vCenter Server instances.

- b In the Clone Role Read-only dialog box, complete the configuration of the role and click **OK**.

Setting	Description
Role name	Log Insight User
Privilege	<ul style="list-style-type: none"> ■ Host.Configuration.Advanced settings ■ Host.Configuration.Change settings ■ Host.Configuration.Network configuration ■ Host.Configuration.Security profile and firewall

These host privileges allow vRealize Log Insight to configure the syslog service on the ESXi hosts.

The Log Insight User role is propagated to other linked vCenter Server instances.

- 5 Assign global permissions to the svc-vrli@rainpole.local service account.
 - a In the vSphere Web Client, select **Administration** from the **Home** menu and click **Global Permissions** under Access Control.
 - b On the **Manage** tab, click **Add Permission**.
 - c In the Global Permissions Root - Add Permission dialog box, click **Add** to associate a user or a group with a role.
 - d In the Select Users/Groups dialog box, from the **Domain** drop-down menu, select **rainpole.local**, in the filter box type **svc**, and press Enter.
 - e From the list of users and groups, select the **svc-vrli** user, click **Add**, and click **OK**.
 - f In the Add Permission dialog box, from the **Assigned Role** drop-down menu, select **Log Insight User**, select **Propagate to children**, and click **OK**.

The global permissions of the svc-vrli@rainpole.local user propagate to all vCenter Server instances.

Connect vRealize Log Insight to vSphere in Region A

After you configure the svc-vrli Active Directory user with the vSphere privileges that are required for retrieving log information from the vCenter Server instances and ESXi hosts, connect vRealize Log Insight to vSphere.

Procedure

- 1 Log in to the vRealize Log Insight user interface.
 - a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vrli_admin_password

- 2 Click the configuration drop-down menu icon  and select **Administration**.
- 3 Under Integration, click **vSphere**.

- 4 In the vCenter Servers pane, enter the connection settings for the Management vCenter Server and for the Compute vCenter Server.
 - a Enter the host name, user credentials, and collection options for the vCenter Server instances, and click **Test Connection**.

vCenter Server Option	Value
Hostname	<ul style="list-style-type: none"> ■ sfo01m01vc01.sfo01.rainpole.local for Management vCenter Server ■ sfo01w01vc01.sfo01.rainpole.local for Compute vCenter Server
Username	svc-vrli@rainpole.local
Password	svc-vrli_user_password
Collect vCenter Server events, tasks and alarms	Selected
Configure ESXi hosts to send logs to Log Insight	Selected

- b Click **Advanced Options** and examine the list of ESXi hosts that are connected to the vCenter Server instance to verify that you connect to the correct vCenter Server.
 - c In the Advanced Options configuration window, select **Configure all ESXi hosts**, select **UDP** under Syslog protocol, and click **OK**.
- 5 Click **Add vCenter Server** to add a new settings form and repeat the steps to add the settings for the second vCenter Server instance in Region A.
- 6 Click **Save**.
A progress dialog box appears.
- 7 Click **OK** in the confirmation dialog box that appears after vRealize Log Insight contacts the vCenter Server instances.

You see the vSphere dashboards under the VMware - vSphere content pack dashboard category.

Configure vCenter Server to Forward Log Events to vRealize Log Insight in Region A

You can configure each vCenter Server and Platform Services Controller appliance to forward system logs and events to the vRealize Log Insight cluster. You can then view and analyze all syslog information in the vRealize Log Insight web interface.

In Region A, you configure the following vCenter Server and Platform Services Controller instances:

Appliance Type	Appliance Management Interface URL
vCenter Server instances	■ https://sfo01m01vc01.sfo01.rainpole.local:5480
	■ https://sfo01w01vc01.sfo01.rainpole.local:5480
Platform Services Controller instances	■ https://sfo01m01psc01.sfo01.rainpole.local:5480
	■ https://sfo01w01psc01.sfo01.rainpole.local:5480

Procedure

- 1 Redirect the log events from the vCenter Server appliance to vRealize Log Insight.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local:5480**.
 - b Log in using the following credentials.

Setting	Value
User name	root
Password	<i>mgmtvc_root_password</i>

- c In the Navigator, click **Syslog Configuration**.
 - d On the Syslog Configuration page, click **Edit**, configure the following settings, and click **OK**.

Setting	Value
Common Log Level	*
Remote Syslog Host	sfo01vrli01.sfo01.rainpole.local
Remote Syslog Port	514
Remote Syslog Protocol	UDP

- e Repeat the steps for the other vCenter Server Appliance and Platform Services Controller Appliances.
- 2 Verify that the appliances are forwarding their syslog traffic to vRealize Log Insight.

- a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrli_admin_password</i>

- c In the vRealize Log Insight user interface, click **Dashboards** and select **VMware - vSphere** under **Content Pack Dashboards**.
 - d Verify that the vCenter Server nodes are presented on the All vSphere events by hostname widget of the **General Overview** dashboard.

Update the Host Profiles for the Management and Shared Edge and Compute Clusters with Syslog Settings in Region A

To have a consistent logging configuration across all ESXi hosts in the clusters in Region A, update the host profile in each cluster to accommodate the syslog settings for connection to vRealize Log Insight.

Setting	Value for the Management Cluster	Value for the Shared Edge and Computer Cluster
vCenter Server URL	https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client/	https://sfo01w01vc01.sfo01.rainpole.local/vsphere-client/
Host Profiles	sfo01-m01hp-mgmt01	sfo01-w01hp-comp01
First ESXi host	sfo01m01esx01.sfo01.rainpole.local	sfo01w01esx01.sfo01.rainpole.local

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 Update the host profile to the management cluster.
 - a From the vSphere Web Client **Home** menu, select **Home**.
 - b In the Navigator, click **Policies and Profiles** and click **Host Profiles**.
 - c Right-click **sfo01-m01hp-mgmt01** and select **Copy Settings** from **Host**.
 - d Select **sfo01m01esx01.sfo01.rainpole.local** and click **OK**.
- 3 Verify that the syslog host settings have been updated.
 - a On the Host Profiles page in the Navigator, click **sfo01-m01hp-mgmt01**.
 - b On the **Configure** tab, click **Settings**.
 - c In **Filter** search box, type in **Syslog.global.logHost**.
 - d Select the **Syslog.global.logHost** entry from the list and verify that value of the option is **udp://sfo01vrli01.sfo01.rainpole.local:514**
- 4 Verify compliance for the hosts in the consolidated cluster.
 - a From the vSphere Web Client **Home** menu, select **Hosts and Clusters**.
 - b Click the **sfo01-m01-mgmt01** cluster, click the **Monitor** tab, and click **Profile Compliance**.
 - c Click the **Check Compliance Now** button.
 - d Verify all hosts are compliant with the attached profile.
- 5 Repeat the procedure with a host in the Shared Edge and Compute cluster.

Connect vRealize Log Insight to vRealize Operations Manager in Region A

Connect vRealize Log Insight to vRealize Operations Manager so that you can use the Launch in Context functionality between the two application to troubleshoot vRealize Operations Manager by using dashboards and alerts in the vRealize Log Insight user interface.

Procedure

- 1 [Configure User Privileges on vRealize Operations Manager for Integration with vRealize Log Insight in Region A](#) on page 317
Configure administrator privileges for the svc-vrli-vrops@rainpole.local service account on vRealize Operations Manager.
- 2 [Enable the vRealize Log Insight Integration with vRealize Operations Manager for Region A](#) on page 318
Connect vRealize Log Insight in Region A with vRealize Operations Manager to launch vRealize Log Insight from within vRealize Operations Manager and to send alerts to vRealize Operations Manager.
- 3 [Connect vRealize Operations Manager to vRealize Log Insight in Region A](#) on page 318

- 4 [Configure the Log Insight Agent on vRealize Operations Manager to Forward Log Events to vRealize Log Insight in Region A](#) on page 319

You connect vRealize Operations Manager to vRealize Log Insight for Launch in Context, configure the Log Insight agent on vRealize Operations Manager to send audit logs and system events to vRealize Log Insight in Region A.

Configure User Privileges on vRealize Operations Manager for Integration with vRealize Log Insight in Region A

Configure administrator privileges for the svc-vrli-vrops@rainpole.local service account on vRealize Operations Manager.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrops_admin_password</i>

- 2 On the main navigator bar, click **Administration**.
- 3 In the left of vRealize Operations Manager, expand **Access** and click **Access Control**.
- 4 On the Access Control page, click the **User Accounts** tab and click the **Import Users** icon.
- 5 On the Import Users page, import the svc-vrli-vrops@rainpole.local service account.
 - a From the **Import From** drop-down menu, select **RAINPOLE.LOCAL**.
 - b Select the **Basic** option for the search query.
 - c In the **Search String** text box, enter **svc-vrli-vrops** and click **Search**.
The search results contain the svc-vrli-vrops user account.
 - d Select **svc-vrli-vrops@rainpole.local** and click **Next**.
- 6 On the Assign Groups and Permissions page, to assign the Administrator role to the svc-vrli-vrops@rainpole.local service account, click the **Objects** tab, configure the following settings and click **Finish**.

Setting	Value
Select Role	Administrator
Assign this role to the user	Selected
Allow access to all objects in the system	Selected

- 7 When prompted with the warning about allowing access to all objects on the system, click **Yes**.

Enable the vRealize Log Insight Integration with vRealize Operations Manager for Region A

Connect vRealize Log Insight in Region A with vRealize Operations Manager to launch vRealize Log Insight from within vRealize Operations Manager and to send alerts to vRealize Operations Manager.

Procedure

- 1 Log in to the vRealize Log Insight user interface.
 - a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrli_admin_password</i>

- 2 In the vRealize Log Insight user interface, click the configuration drop-down menu icon  and select **Administration**.
- 3 Under Integration, click **vRealize Operations**.
- 4 On the vRealize Operations Manager page, configure the integration settings for vRealize Operations Manager.

Setting	Value
Hostname	vrops01svr01.rainpole.local
Username	svc-vrli-vrops@rainpole.local
Password	<i>svc-vrli-vrops_password</i>
Enable alerts integration	Selected
Enable launch in context	Selected

- 5 Click **Test Connection** to validation the connection and click **Save**.
A progress dialog box appears.
- 6 Click **OK** to close the dialog.

Connect vRealize Operations Manager to vRealize Log Insight in Region A

Configure a vRealize Log Insight Adapter to integrate vRealize Log Insight with vRealize Operations Manager in your environment. You can access unstructured log data about any object in your environment by using Launch in Context in vRealize Operations Manager.

Procedure

- 1 Log in to vRealize Operations Manager by using the operations interface.
 - a Open a Web browser and go to **https://vrops01svr01.rainpole.local**.
 - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrops_admin_password</i>

- 2 On the main navigation bar, click **Administration**.

- 3 In the left pane of vRealize Operations Manager, click **Solutions**.
- 4 On the Solutions page, select **VMware vRealize Log Insight** from the solution table, and click **Configure**.

The Manage Solution - VMware vRelalize Log Insight dialog box appears.

- 5 Under Instance Settings, enter the settings for connection to vRelalize Log Insight.
 - a Enter the display name, description and the FQDN of the vRealize Log Insight instance.

Setting	Value for vRealize Log Insight
Display Name	Log Insight Adapter - sfo01vrli01
Description	vRealize Log Insight for sfo01
Log Insight server	sfo01vrli01.sfo01.rainpole.local

- b Click **Test Connection** to validate the connection to vRelaize Log Insight.
 - c Click **OK** in the Info box.
 - d Expand the **Advanced Settings** pane and select **sfo01-remote-collectors** from the **Collectors/Groups** drop-down menu.
 - e Click **Save Settings**.
 - f Click **OK** in the Info box.
- 6 In the Manage Solution - VMware vRealize Log Insight dialog box, click **Close**.

The vRealize Log Insight Adapter is available on the Solutions page of the vRealize Operations Manager user interface. The **Collection State** of the adapter is Collecting and the **Collection Status** is Data receiving.

Configure the Log Insight Agent on vRealize Operations Manager to Forward Log Events to vRealize Log Insight in Region A

You connect vRealize Operations Manager to vRealize Log Insight for Launch in Context, configure the Log Insight agent on vRealize Operations Manager to send audit logs and system events to vRealize Log Insight in Region A.

Procedure

- 1 Enable Secure Shell (SSH) on each node of vRealize Operations Manager.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	<i>vsphere_admin_password</i>

- c Under the sfo01m01vc01.sfo01.rainpole.local vCenter Server, navigate to the virtual appliance for the node.

Virtual Appliance Name	Role
vrops01svr01a	Master node
vrops01svr01b	Master replica node
vrops01svr01c	Data node 1
sfo01vropsc01a	Remote collector 1
sfo01vropsc01b	Remote collector 2

- d Right-click the appliance node and select **Open Console** to open the remote console to the appliance.
- e Press ALT+F1 to switch to the command prompt.
- f Log in using the following credentials.

Setting	Value
User name	root
Password	<i>vrops_root_password</i>

- g Start the SSH service by running the following command.

```
service sshd start
```

- h Close the virtual appliance console.
- i Repeat the step for other appliance nodes.

2 Configure the Log Insight agent in vRealize Operation Manager.

- a Open an SSH connection to the vRealize Operations Manager appliances using the following settings.

Setting	Value
Host name	<ul style="list-style-type: none"> ■ vrops01svr01a.rainpole.local ■ vrops01svr01b.rainpole.local ■ vrops01svr01c.rainpole.local ■ sfo01vropsc01a.sfo01.rainpole.local ■ sfo01vropsc01b.sfo01.rainpole.local
User name	root
Password	<i>vrops_root_password</i>

- b Edit the liagent.ini file on each vRealize Operations Manager node using a text editor such as vi.

```
vi /var/lib/loginsight-agent/liagent.ini
```

- c Locate the [server] section and uncomment the following parameters.

```
[server]
; Log Insight server hostname or ip address
; If omitted the default value is LOGINSIGHT
hostname=sfo01vrli01.sfo01.rainpole.local
; Set protocol to use:
; cfapi – Log Insight REST API
; syslog – Syslog protocol
; If omitted the default value is cfapi
;
proto=cfapi
; Log Insight server port to connect to. If omitted the default value is:
; for syslog: 512
; for cfapi without ssl: 9000
; for cfapi with ssl: 9543
port=9000
;ssl – enable/disable SSL. Applies to cfapi protocol only.
; Possible values are yes or no. If omitted the default value is no.
ssl=no
; Time in minutes to force reconnection to the server
; If omitted the default value is 30
;reconnect=30
```

- d After the [server] section, add the following block on each vRealize Operations Manager node:

```
[common|filelog]
tags={"vmw_vr_ops_appname":"vROps", "vmw_vr_ops_clustername":"vrops01svr01",
"vmw_vr_ops_clusterrole":"<vROPS Node Role Here>",
"vmw_vr_ops_nodename":"<Your vROPS Node Name Here>",
"vmw_vr_ops_hostname":"<Your vROPS Hostname Here>"}
```

- e Modify the following parameters specifically for each node.

Parameter	Description	Location in liagent.ini
vmw_vr_ops_clusterrole	Role of the vRealize Operations Manager node	Set to Master , Replica , Data or Remote Collector according to the role of the node.
vmw_vr_ops_nodename	IP address or FQDN of the vRealize Operations Manager node	Replace each <Your VROPS Node Name Here> with the following names: ■ vrops01svr01a ■ vrops01svr01b ■ vrops01svr01c ■ sfo01vropsc01a ■ sfo01vropsc01b
vmw_vr_ops_hostname	Name of the vRealize Operations Manager node that is set during node initial configuration	Replace each <Your VROPS Hostname Here> with the following names: ■ vrops01svr01a.rainpole.local ■ vrops01svr01b.rainpole.local ■ vrops01svr01c.rainpole.local ■ sfo01vropsc01a.sfo01.rainpole.local ■ sfo01vropsc01b.sfo01.rainpole.local

For example, on the master replica node you change the [common|filelog] section to add context to the logs that are sent to the vRealize Log Insight cluster:

```
[common|filelog]
tags={"vmw_vr_ops_appname":"vR0ps", "vmw_vr_ops_clustername":"vrops01svr01",
"vmw_vr_ops_clusterrole":"Replica", "vmw_vr_ops_nodename":"vrops01svr01b",
"vmw_vr_ops_hostname":"vrops01svr01b.rainpole.local"}
```

- f Press Esc and enter **:wq!** to save the file.
- g Restart the Log Insight agent on node by running the following console command.
- ```
/etc/init.d/liagentd restart
```
- h Verify that the Log Insight agent is running.
- ```
/etc/init.d/liagentd status
```
- i Stop the SSH service on the virtual appliance by running the following command.
- ```
service sshd stop
```
- 3 Repeat the steps for each of the remaining vRealize Operations Manager nodes.
- 4 Configure the Agent Group for the vRealize Operations Manager components from the vRealize Log Insight Web user interface.
- a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
- b Log in using the following credentials.

| Setting   | Value                      |
|-----------|----------------------------|
| User name | admin                      |
| Password  | <i>vrli_admin_password</i> |

- c Click the configuration drop-down menu icon  and select **Administration**.
- d Under Management, click **Agents**.

- e From the drop-down menu at the top, select **vRops 6.4 or higher - Sample** from the Available Templates section and click the **Copy Template** button at the bottom.
- f In the Copy Agent Group dialog box, enter **vRops6 – Agent Group** in the **Name** text box and click **Copy**.
- g In the agent filter fields, enter the following values pressing Enter after each host name.

| Filter   | Operator | Values                                                                                                                                                                                                                                                         |
|----------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Hostname | matches  | <ul style="list-style-type: none"> <li>■ vrops01svr01a.rainpole.local</li> <li>■ vrops01svr01b.rainpole.local</li> <li>■ vrops01svr01c.rainpole.local</li> <li>■ sfo01vropsc01a.sfo01.rainpole.local</li> <li>■ sfo01vropsc01b.sfo01.rainpole.local</li> </ul> |

- h Click **Refresh** and verify that all the agents in the filter appear in the Agents list.
- i Click **Save New Group** at the bottom of the page.
- j Click the **Dashboard** tab and select the **VMware - vRops 6.x** dashboard under the **Content Pack Dashboards** on the left.

All VMware - vRops 6 dashboards become available on the home page of vRealize Log Insight. You see Total number of vRops Clusters showing 1 and Total number of vRops nodes over time showing the host names of the vRealize Operations Manager nodes.

## Connect vRealize Log Insight to the NSX Instances in Region A

Install and configure the vRealize Log Insight Content Pack for NSX for vSphere for log visualization and alerting of the NSX for vSphere real-time operation. You can use the NSX-vSphere dashboards to monitor logs about installation and configuration, and about virtual networking services.

### Procedure

- 1 [Install the vRealize Log Insight Content Pack for NSX for vSphere in Region A](#) on page 324  
Install the content pack for NSX for vSphere to add the dashboards for viewing log information in vRealize Log Insight.
- 2 [Configure NSX Managers to Forward Log Events to vRealize Log Insight in Region A](#) on page 324  
Configure the NSX Manager for the management cluster and the NSX Manager for the compute and edge clusters to send audit logs and system events to vRealize Log Insight in Region A.
- 3 [Configure the NSX Controllers to Forward Events to vRealize Log Insight in Region A](#) on page 325  
Configure the NSX Controller instances for the management cluster and shared compute and edge cluster to forward log information to vRealize Log Insight in Region A by using the NSX REST API. To enable log forwarding, you can use a REST client, such as the Postman application for Google Chrome.
- 4 [Configure the NSX Edge Instances to Forward Log Events to vRealize Log Insight in Region A](#) on page 329  
Redirect log information from the edge services gateways, universal distributed logical router and load balancer in Region A to vRealize Log Insight in Region A.

## Install the vRealize Log Insight Content Pack for NSX for vSphere in Region A

Install the content pack for NSX for vSphere to add the dashboards for viewing log information in vRealize Log Insight.

### Procedure

- 1 Log in to the vRealize Log Insight user interface.
  - a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
  - b Log in using the following credentials.

| Setting   | Value                      |
|-----------|----------------------------|
| User name | admin                      |
| Password  | <i>vrli_admin_password</i> |

- 2 In the vRealize Log Insight user interface, click the configuration drop-down menu icon  and select **Content Packs**.
- 3 Under Content Pack Marketplace, select **Marketplace**.
- 4 In the list of content packs, locate the **VMware - NSX-vSphere** content pack and click its icon.
- 5 In the Install Content Pack dialog box, accept the License Agreement and click **Install**.
- 6 In the VMware - NSX-vSphere Setup Instructions dialog box, click **OK**.

After the installation is complete, the VMware - NSX-vSphere content pack appears in the Installed Content Packs list on the left.

## Configure NSX Managers to Forward Log Events to vRealize Log Insight in Region A

Configure the NSX Manager for the management cluster and the NSX Manager for the compute and edge clusters to send audit logs and system events to vRealize Log Insight in Region A.

### Procedure

- 1 On the Windows host that has access to the data center, log in to the NSX Manager Web interface.
  - a Open a Web browser and go to following URL.

| NSX Manager                                         | URL                                                                                                 |
|-----------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| NSX Manager for the management cluster              | <a href="https://sfo01m01nsx01.sfo01.rainpole.local">https://sfo01m01nsx01.sfo01.rainpole.local</a> |
| NSX Manager for the shared compute and edge cluster | <a href="https://sfo01w01nsx01.sfo01.rainpole.local">https://sfo01w01nsx01.sfo01.rainpole.local</a> |

- b Log in using the following credentials.

| Setting   | Value                             |
|-----------|-----------------------------------|
| User name | admin                             |
| Password  | <i>nsx_manager_admin_password</i> |

- 2 On the main page of the appliance user interface, click **Manage Appliance Settings**.
- 3 Under Settings, click **General**, and in the Syslog Server pane, click **Edit**.

- 4 In the Syslog Server dialog box, configure vRealize Log Insight as a syslog server by specifying the following settings and click **OK**.

| Syslog Server Setting | Value                            |
|-----------------------|----------------------------------|
| Syslog Server         | sfo01vrli01.sfo01.rainpole.local |
| Port                  | 514                              |
| Protocol              | UDP                              |

- 5 Repeat the steps for the other NSX Manager.

## Configure the NSX Controllers to Forward Events to vRealize Log Insight in Region A

Configure the NSX Controller instances for the management cluster and shared compute and edge cluster to forward log information to vRealize Log Insight in Region A by using the NSX REST API. To enable log forwarding, you can use a REST client, such as the Postman application for Google Chrome.

### Procedure

- 1 Log in to the Windows host that has access to your data center.
- 2 In a Chrome browser, start the Postman application and log in.
- 3 Specify the request headers for requests to the NSX Manager.
  - a On the **Authentication** tab, configure the following authorization settings and click **Update Request**.

| Setting   | Value                                                        |
|-----------|--------------------------------------------------------------|
| Type      | Basic Auth                                                   |
| User name | admin                                                        |
| Password  | sfo01m01nsx01_admin_password<br>sfo01w01nsx01_admin_password |

The Authorization:Basic XXX header appears in the Headers pane.

- b On the **Headers** tab, enter the following header details.

| Request Header Attribute | Value           |
|--------------------------|-----------------|
| Content-Type             | application/xml |

The Content-Type:application/xml header appears in the Headers pane.

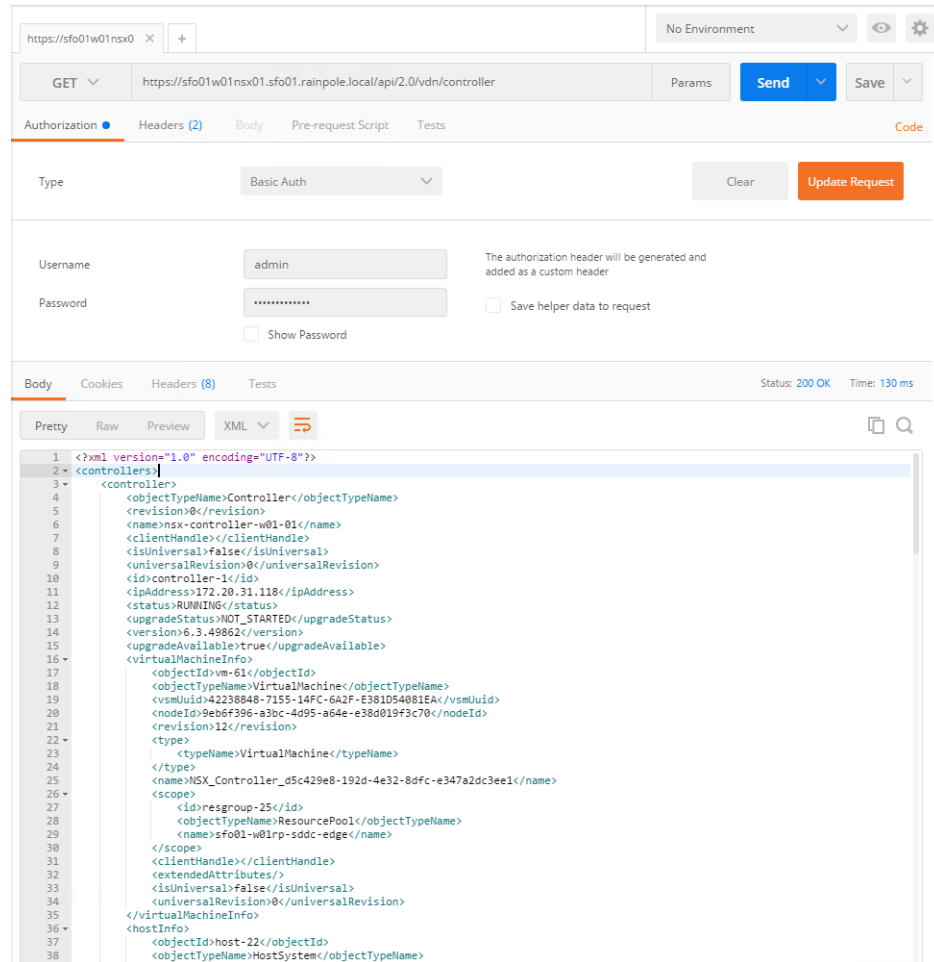

- 4 Contact the NSX Manager to retrieve the IDs of the associated NSX Controllers.
  - a Select **GET** from the drop-down menu that contains the HTTP request methods.
  - b In the **URL** text box next to the selected method, enter the following URL, and click **Send**.

| NSX Manager                                         | URL                                                               |
|-----------------------------------------------------|-------------------------------------------------------------------|
| NSX Manager for the management cluster              | https://sfo01m01nsx01.sfo01.rainpole.local/api/2.0/vdn/controller |
| NSX Manager for the shared edge and compute cluster | https://sfo01w01nsx01.sfo01.rainpole.local/api/2.0/vdn/controller |

The Postman application sends a query to the NSX Manager about the installed NSX controllers.

- c After the NSX Manager sends a response back, click the **Body** tab in the response pane.  
The response body contains a root `<controllers>` XML element that groups the details about the three controllers that form the controller cluster.
- d Within the `<controllers>` element, locate the `<controller>` element for each controller and write down the content of the `<id>` element.

Controller IDs have the `controller-id` format where *id* represents the sequence number of the controller in the cluster, for example, `controller-1` in the image below.

- e Repeat the steps for the other NSX Manager.

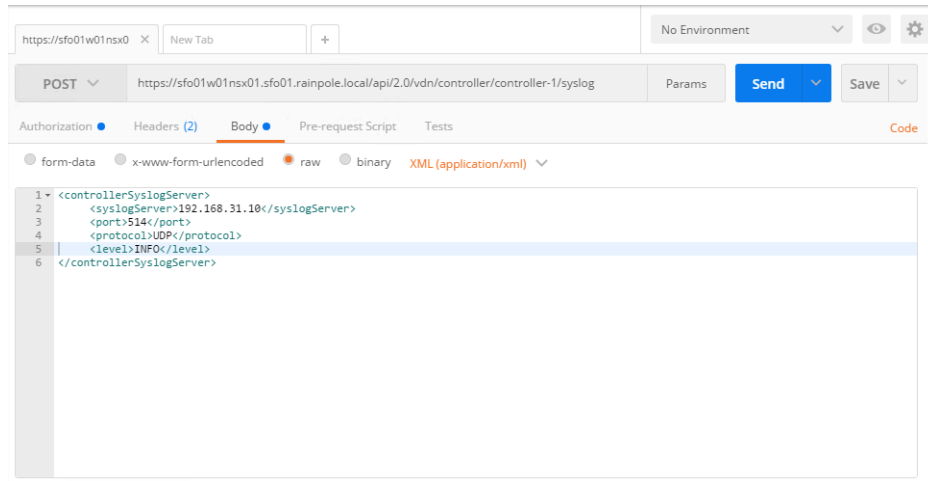

- 5 For each NSX Controller, send a request to configure vRealize Log Insight as a remote syslog server.
- a In the request pane at the top, select **POST** from the drop-down menu that contains the HTTP request methods, and in the **URL** text box, enter the following URL. Replace *controller-ID* with the controller IDs you have written down.

| NSX Manager                                         | NSX Controller in the Controller Cluster | POST URL                                                                                       |
|-----------------------------------------------------|------------------------------------------|------------------------------------------------------------------------------------------------|
| NSX Manager for the management cluster              | NSX Controller 1                         | https://sfo01m01nsx01.sfo01.rainpole.local/api/2.0/vdn/controller/ <b>controller-1</b> /syslog |
|                                                     | NSX Controller 2                         | https://sfo01m01nsx01.sfo01.rainpole.local/api/2.0/vdn/controller/ <b>controller-2</b> /syslog |
|                                                     | NSX Controller 3                         | https://sfo01m01nsx01.sfo01.rainpole.local/api/2.0/vdn/controller/ <b>controller-3</b> /syslog |
| NSX Manager for the shared edge and compute cluster | NSX Controller 1                         | https://sfo01w01nsx01.sfo01.rainpole.local/api/2.0/vdn/controller/ <b>controller-1</b> /syslog |
|                                                     | NSX Controller 2                         | https://sfo01w01nsx01.sfo01.rainpole.local/api/2.0/vdn/controller/ <b>controller-2</b> /syslog |
|                                                     | NSX Controller 3                         | https://sfo01w01nsx01.sfo01.rainpole.local/api/2.0/vdn/controller/ <b>controller-3</b> /syslog |

- b In the Request pane, click the **Body** tab, select **Raw**, and using the drop-down menu, select **XML (Application/XML)**.

- c Paste the following request body in the **Body** text box and click **Send**.

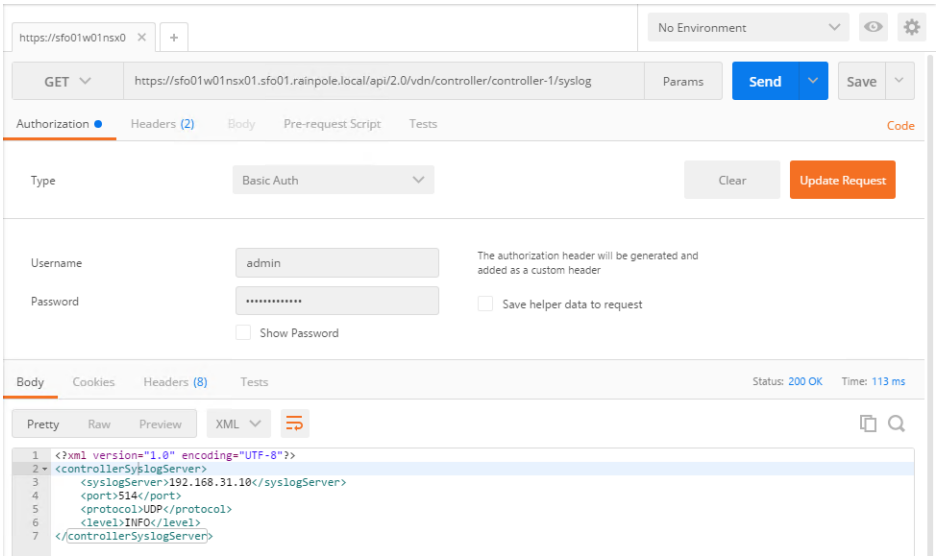

```
<controllerSyslogServer>
 <syslogServer>192.168.31.10</syslogServer>
 <port>514</port>
 <protocol>UDP</protocol>
 <level>INFO</level>
</controllerSyslogServer>
```

- d Repeat the steps for the other NSX Controllers in the management cluster and in the shared edge and compute cluster.
- 6 Verify the syslog configuration on each NSX Controller.
- a In the Request pane, from the **Method** drop-down menu, select **GET**, in the **URL** text box, enter the controller-specific syslog URL from [Step 5](#), and click the **SEND** button.
- b After the NSX Manager sends a response back, click the **Body** tab under Response.

The response body contains a root `<controllerSyslogServer>` element, which represents the settings for the remote syslog server on the NSX Controller.

- c Verify that the value of the <syslogServer> element is 192.168.31.10.
- d Repeat the steps for the other NSX Controllers to verify the syslog configuration.

Configure the NSX Edge Instances to Forward Log Events to vRealize Log Insight in Region A

Redirect log information from the edge services gateways, universal distributed logical router and load balancer in Region A to vRealize Log Insight in Region A.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
  - a Open a Web browser and go to `https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`.
  - b Log in using the following credentials.

Setting	Value
User name	administrator@vsphere.local
Password	vsphere_admin_password

- 2 From the **Home** menu, select **Networking & Security**.
- 3 From the **Networking & Security** menu on the left, click **NSX Edges**.
- 4 On the **NSX Edges** page, select the NSX Manager instance from the **NSX Manager** drop-down menu.

NSX Manager Instance	IP Address
Management NSX Manager	172.16.11.65
Compute NSX Manager	172.16.11.66

The edge devices in the scope of the NSX Manager appear.

- 5 Configure the log forwarding on each edge service gateway of Management and Compute NSX Managers instances.

- a Double-click the edge device to open its user interface.

Traffic	Management NSX Edge Services Gateway	Compute NSX Edge Services Gateway

Load Balancer	sfo01m01lb01	-
PSC Load Balancer	sfo01psc01	-

- b On the NSX Edge device page, click the **Manage** tab, click **Settings**, and click **Configuration**.
  - c In the Details pane, click **Change** next to **Syslog servers**.
  - d In the Edit Syslog Servers Configuration dialog box, configure the following settings and click **OK**.

Setting	Value
Syslog Server 1	192.168.31.10
Protocol	udp

- e Click **OK**.
  - f Repeat the steps for the remaining NSX Edge devices of Management and Compute NSX Manager instances.

The vRealize Log Insight user interface starts showing log data in the NSX-vSphere-Overview dashboard available under the VMware - NSX-vSphere group of content pack dashboards.

## Connect vRealize Log Insight to vRealize Automation in Region A

Connect the vRealize Log to vRealize Automation to receive log information from all components of vRealize Automation in the vRealize Log Insight UI.

### Procedure

- 1 [Install the vRealize Log Insight Content Packs for the Cloud Management Platform in Region A](#) on page 331  
Install the content packs for vRealize Automation, vRealize Orchestrator and Microsoft SQL Server to add the dashboards for viewing log information about the Cloud Management Platform in vRealize Log Insight.
- 2 [Install and Configure vRealize Log Insight Windows Agents in Region A](#) on page 332  
Install the vRealize Log Insight agent on the Windows virtual machines for the Distributed Execution Manager, IaaS Manager Service, IaaS Web Server, IaaS SQL Server and the vSphere proxy agents. Configure Log Insight Windows Agents centrally from the vRealize Log Insight Web interface.
- 3 [Configure vRealize Log Insight Linux Agents in the vRealize Automation Virtual Appliances in Region A](#) on page 334  
vRealize Log Insight Agent comes pre-installed on the vRealize Automation virtual appliance. Configure the `liagent.ini` configuration file on each virtual appliance.

- 4 [Configure the vRealize Log Insight Linux Agents on vRealize Business in Region A](#) on page 337  
vRealize Log Insight Agent comes pre-installed on the vRealize Business virtual appliances. Configure the `liagent.ini` configuration file on each virtual appliance.
- 5 [Configure Embedded vRealize Orchestrator to Forward Log Events to vRealize Log Insight in Region A](#) on page 339  
You enable the vRealize Log Insight agent and configure the agent group for the embedded vRealize Orchestrator to start collecting log data in the vRealize Orchestrator dashboards.

## Install the vRealize Log Insight Content Packs for the Cloud Management Platform in Region A

Install the content packs for vRealize Automation, vRealize Orchestrator and Microsoft SQL Server to add the dashboards for viewing log information about the Cloud Management Platform in vRealize Log Insight.

You install the following content packs:

- VMware - vRA 7
- VMware - Orchestrator 7.0.1+
- Microsoft - SQL Server

### Procedure

- 1 Log in to the vRealize Log Insight user interface.
  - a Open a Web browser and go to **`https://sfo01vrli01.sfo01.rainpole.local`**.
  - b Log in using the following credentials.

Setting	Value
User name	admin
Password	<i>vrli_admin_password</i>
- 2 In the vRealize Log Insight user interface, click the configuration drop-down menu icon  and select **Content Packs**.
- 3 Under Content Pack Marketplace, select **Marketplace**.
- 4 In the list of content packs, locate the **VMware - vRA 7** content pack and click its icon.
- 5 In the Install Content Pack dialog box, click **Install**.
- 6 Repeat the procedure to install the **VMware - Orchestrator** and **Microsoft - SQL Server** content packs.

After the installation is complete, the VMware - vRA, VMware - Orchestrator 7.0.1+ and Microsoft - SQL Server content packs appear in the Installed Content Packs list on the left.

## Install and Configure vRealize Log Insight Windows Agents in Region A

Install the vRealize Log Insight agent on the Windows virtual machines for the Distributed Execution Manager, IaaS Manager Service, IaaS Web Server, IaaS SQL Server and the vSphere proxy agents. Configure Log Insight Windows Agents centrally from the vRealize Log Insight Web interface.

### Procedure

- 1 Install the Log Insight Windows Agents on all the vRealize Automation Windows VMs.
  - a Open a Remote Desktop Protocol (RDP) connection to each of the following vRealize Automation virtual machines.

vRealize Automation Component	Host Name or VM Name
IaaS Web Server	vra01iws01a.rainpole.local
IaaS Web Server	vra01iws01b.rainpole.local
IaaS Manager Service and DEM Orchestrator	vra01ims01a.rainpole.local
IaaS Manager Service and DEM Orchestrator	vra01ims01b.rainpole.local
IaaS DEM Worker	vra01dem01a.rainpole.local
IaaS DEM Worker	vra01dem01b.rainpole.local
vSphere Proxy Agent	sfo01ias01a.sfo01.rainpole.local
vSphere Proxy Agent	sfo01ias01b.sfo01.rainpole.local
Microsoft SQL Server	vra01mssql01.rainpole.local

- b Log in using the following credentials.

Setting	Value
User name	Rainpole\svc-vra
Password	svc-vra-user-password

- c Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
  - d Log in using the following credentials.

Setting	Value
User name	admin
Password	vrli_admin_password

- e Click the configuration drop-down menu icon  and select **Administration**.
  - f Under Management, click **Agents**.
  - g On the Agents page, click the **Download Log Insight Agent Version** link.
  - h In the Download Log Insight Agent Version dialog box, click **Windows MSI (32-bit/64-bit)** and save the .msi file on the vRealize Automation virtual machine.
  - i Open an administrative command prompt window, and navigate to the directory to where you saved the .msi file.
  - j Run the the following command to install the vRealize Log Insight agent with custom values.
 

```
VMware-Log-Insight-Agent-4.5.0-5626690_192.168.31.10.msi SERVERPORT=9000 AUTOUPDATE=yes
LIAGENT_SSL=no
```

- k In the VMware vRealize Log Insight Agent Setup wizard, accept the license agreement and click **Next**.
  - l With the Log Insight host name **sfo01vrli01.sfo01.rainpole.local** selected in the **Host** text box, click **Install**.
  - m After the installation is complete, click **Finish**.
  - n Repeat the steps for the other vRealize Automation virtual machines.
- 2 Configure the Log Insight Windows Agent Group for the vRealize Automation IaaS components from the vRealize Log Insight Web user interface.
- a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
  - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vrli_admin_password

- c Click the configuration drop-down menu icon  and select **Administration**.
- d Under Management, click **Agents**.
- e From the drop-down at the top, select **vRealize Automation 7 - Windows** from the Available Templates section.
- f Click **Copy Template**.
- g In the Copy Agent Group dialog box, enter **vRA7 - Windows Agent Group** in the name text box and click **Copy**.
- h In the agent filter fields, use the following selections.  
Use ENTER to separate the host name values.

Filter	Operator	Values
Hostname	matches	vra01iws01a.rainpole.local vra01iws01b.rainpole.local vra01ims01a.rainpole.local vra01ims01b.rainpole.local vra01dem01a.rainpole.local vra01dem01b.rainpole.local sfo01ias01a.sfo01.rainpole.local sfo01ias01b.sfo01.rainpole.local

- i Click **Refresh** and verify that all the agents that are listed in the filter appear in the Agents list.
  - j Click **Save New Group** at the bottom of the page.
- 3 In the vRealize Log Insight Web user interface, configure the Log Insight Windows Agent Group for the Microsoft SQL Server component that is used by vRealize Automation.
- a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
  - b Log in using the following credentials.

Setting	Value
User name	admin
Password	vrli_admin_password

- c Click the configuration drop-down menu icon  and select **Administration**.
- d Under Management, click **Agents**.
- e From the drop-down at the top, select **Microsoft - SQL Server** from the Available Templates section.
- f Click **Copy Template**.
- g In the Copy Agent Group dialog box, enter **vRA7 - Microsoft SQL Server Agent Group** in the name text box and click **Copy**.
- h In the agent filter fields, use the following selections.  
Use ENTER to separate the host name values.

Filter	Operator	Values
Hostname	matches	vra01mssql01.rainpole.local

- i Under Agent Configuration, click **Edit**
  - j Locate `directory=C:\Program Files\Microsoft SQL Server\MSSQL10.MSSQLSERVER\MSSQL\Log` and change it to `directory=C:\Program Files\Microsoft SQL Server\MSSQL11.MSSQLSERVER\MSSQL\Log`
- 
- NOTE** In this VMware Validated Design, Microsoft SQL Server 2012 R2 has been installed in the default location on the Windows Server virtual machine.
- 
- k Click **Refresh** and verify that all the agents listed in the filter appear in the Agents list.
  - l Click **Save New Group** at the bottom of the page.

All VMware vRA 7 dashboards become available on the home page of vRealize Log Insight.

## Configure vRealize Log Insight Linux Agents in the vRealize Automation Virtual Appliances in Region A

vRealize Log Insight Agent comes pre-installed on the vRealize Automation virtual appliance. Configure the `liagent.ini` configuration file on each virtual appliance.

### Procedure

- 1 Configure logging in the management interface of the vRealize Automation virtual appliance.
  - a Open a Web browser and log in to the following URL.

Setting	Value for vRealize Appliance A	Value for vRealize Appliance B
URL	<code>https://vra01svr01a.rainpole.local:5480</code>	<code>https://vra01svr01b.rainpole.local</code>
User name	root	root
Password	<code>vra_applianceA_root_password</code>	<code>vra_applianceB_root_password</code>

- b On the **VRA Settings** tab, click the **Logs** tab.
- c Scroll down to the **Log Insight Agent Configuration** section.

- d Enter the following values and click **Save Settings**

Setting	Value
Host	sfo01vrli01.sfo01.rainpole.local
Port	9000
Protocol	CFAPI
SSL Enabled	Unchecked
Reconnect	30
Max Buffer Size	2000

- e Verify these settings have been replicated to vRealize Automation appliance vra01svr01b.rainpole.local.

- 2 Configure the Linux Agent Group on the Log Insight server.

- a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.  
b Log in using the following credentials.

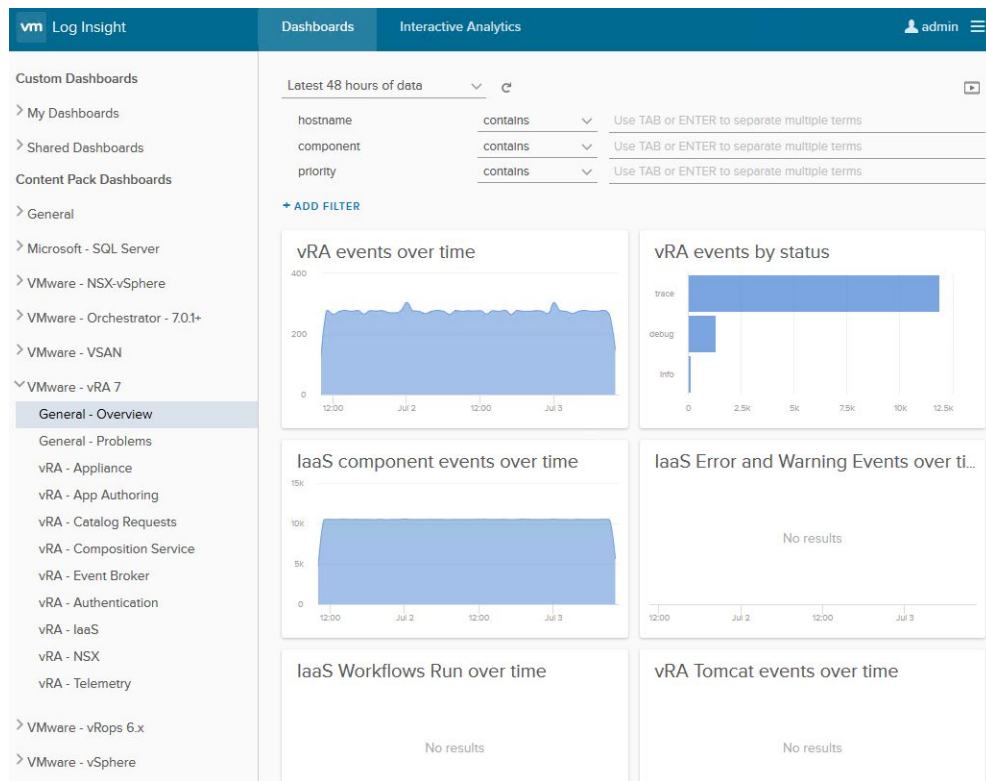

Setting	Value
User name	admin
Password	vrli_admin_password

- c Click the configuration drop-down menu icon  and select **Administration**.  
d Under Management, click **Agents**.  
e From the drop-down menu on the top, select **vRealize Automation 7 - Linux** from the Available Templates section.  
f Click **Copy Template** at the bottom of the page.  
g In the Copy Agent Group dialog box, enter **vRA7 - Linux Agent Group** in the name field and click **Copy**.  
h In the agent filter fields, enter the following values pressing Enter after each host name.

Filter	Operator	Values
Hostname	matches	■ vra01svr01a.rainpole.local
		■ vra01svr01b.rainpole.local

- i Click **Refresh** and verify that all the agents in the filter appear in the Agents list.

- j Click **Save New Group** at the bottom of the page.
- k Click the **Dashboard** tab and select the **VMware - vRA 7** dashboard from the navigator menu on the left.

All VMware vRA 7 dashboards become available on the vRealize Log Insight Home page.

# Configure the vRealize Log Insight Linux Agents on vRealize Business in Region A

vRealize Log Insight Agent comes pre-installed on the vRealize Business virtual appliances. Configure the `liagent.ini` configuration file on each virtual appliance.

## Procedure

- 1 Enable Secure Shell (SSH) on the vRealize Business appliances.

- a Open a Web browser and go to the following URL.

vRealize Business Node	Virtual Appliance Management Interface URL
vRealize Business Server Appliance	https://vrb01svr01.rainpole.local:5480
vRealize Business Data Collector	https://sfo01vrbc01.sfo01.rainpole.local:5480

- b Log in using the following credentials.

Setting	Value
User name	root
Password	<i>vrb_server_root_password</i>

The appliance management interface of the appliance opens.

- c Click the **Administration** tab and click **Administration**.  
d Under the Actions section, click **Toggle SSH setting**.  
e Verify that the SSH service status is **Enabled**.  
f Repeat the step for the second vRealize Business appliance.

- 2 Configure the vRealize Log Insight agent in on the vRealize Business appliances.

- a Open an SSH connection to the vRealize Business appliance using the following settings.

Setting	Value
Hostname	■ vrb01svr01.rainpole.local ■ sfo01vrbc01.sfo01.rainpole.local
User name	root
Password	<i>vrb_server_appliance_root_password</i>

- b Edit the `liagent.ini` file using a text editor such as `vi`.

```
vi /var/lib/loginsight-agent/liagent.ini
```

- c Add the following information under the `[server]` section.

```
[server]

hostname=sfo01vrli01.sfo01.rainpole.local

proto = cfapi

port = 9000

ssl = no
```

- d Replace all instances of the FQDN\_localhost parameter located after agent\_name with **vr01svr01.rainpole.local**.

```
[server]
hostname=sfo01vrli01.sfo01.rainpole.local
proto=cfcp1
port=9000
ssl=no

; itfm server log
[filelog]ItfmServer
directory=/var/log/vrb/itfm-server
include=*
tags={"appliance": "vr01", "service": "itfm_server", "agent_name": "vr01svr01.rainpole.local"}
event_marker="(\d{4}-\d{2}-\d{2})\d{2}:\d{2}:\d{2}\.\d{3}\d{2}-[A-Z][a-z]{2}-\d{4}\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}"

; itfm tomcat log
[filelog]ItfmCatalina
directory=/usr/local/tcserver/vfabric-tc-server-standard/itbm-server/logs
include=*

event_marker="(\d{4}-\d{2}-\d{2})\d{2}:\d{2}:\d{2}\.\d{3}\d{2}-[A-Z][a-z]{2}-\d{4}\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}"

; data collector log
[filelog]DataCollector
directory=/var/log/vrb/data-collector
include=*
tags={"appliance": "vr01", "service": "data_collector", "agent_name": "vr01svr01.rainpole.local"}
event_marker="(\d{4}-\d{2}-\d{2})\d{2}:\d{2}:\d{2}\.\d{3}\d{2}-[A-Z][a-z]{2}-\d{4}\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}"
```

- e Press Esc and type :wq! to save the file.
- f Start the Log Insight agent.
- ```
/etc/init.d/liagentd start
```
- g Verify that the Log Insight agent is running.
- ```
/etc/init.d/liagentd status
```
- h Turn on auto-run by default for the Log Insight agent.
- ```
chkconfig liagentd on
```
- i Repeat the steps to configure the vRealize Business Data Collector at sfo01vrbc01.sfo01.rainpole.local.
- 3 Confirm that the Log Insight agents are working in the vRealize Log Insight Web interface.
- a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
- b Log in using the following credentials.
- | Setting | Value |
|-----------|---------------------|
| User name | admin |
| Password | vrli_admin_password |
- c Click the configuration drop-down menu icon  and select **Administration**.
- d Under Management, click **Agents**.
- e Verify that vr01svr01.rainpole.local and sfo01vrbc01.sfo01.rainpole.local appear on the page.

Configure Embedded vRealize Orchestrator to Forward Log Events to vRealize Log Insight in Region A

You enable the vRealize Log Insight agent and configure the agent group for the embedded vRealize Orchestrator to start collecting log data in the vRealize Orchestrator dashboards.

Procedure

- 1 Enable the vRealize Log Insight agents for vRealize Orchestrator.
 - a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
 - b Log in using the following credentials.

| Setting | Value |
|-----------|---------------------|
| User name | admin |
| Password | vrli_admin_password |

- c Click the configuration drop-down menu icon  and select **Administration**.
 - d Under Management, click **Agents**.
 - e From the drop-down menu at the top, select **vRealize Orchestrator 7.0.1** from the All Agents section and click **Copy Template**.
 - f In the Copy Agent Group dialog box, enter **vr07 – Agent Group** in the name text box and click **Copy**.
 - g In the agent filter fields, enter the following values pressing Enter after each host name to determine which agents receive the configuration.

| Filter | Operator | Values |
|----------|----------|--|
| Hostname | matches | <ul style="list-style-type: none"> ■ vra01svr01a.rainpole.local ■ vra01svr01b.rainpole.local |

- h Click **Refresh** and verify that in the Agents list vRealize Log Insight receives data from the two agents in the filter.
 - i Click **Save New Group** at the bottom of the page.
- 2 Verify that the vRealize Log Insight server is receiving log events from the vRealize Orchestrator appliances.
 - a Click on **Dashboards**, select **VMware - Orchestrator - 7.0.1+** from the **Navigator** menu on the left side.
 - b Verify that the Server nodes grouped by hostname widget on the **Server overview** dashboard shows the two vRealize Orchestrator hosts.

Install the Linux Content Pack and Configure the Virtual Appliance Agent Group for vRealize Log Insight for Region A.

Install the content pack for VMware Linux to add the dashboards for viewing log information about the management virtual appliances in vRealize Log Insight.

Procedure

- 1 Log in to the vRealize Log Insight user interface.

- a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
 - b Log in using the following credentials.

| Setting | Value |
|-----------|---------------------|
| User name | admin |
| Password | vrli_admin_password |

- 2 Install the content pack for VMware Linux.

- a In the vRealize Log Insight user interface, click the configuration drop-down menu icon  and select **Content Packs**.
 - b Under Content Pack Marketplace, select **Marketplace**.
 - c In the list of content packs, locate the **Linux** content pack and click its icon.
 - d In the Install Content Pack dialog box, accept the License Agreement and click **Install**.
 - e After the installation is complete, the **Linux** content pack appears in the Installed Content Packs list on the left.

- 3 Configure the Log Insight Linux agent group for the virtual appliances from the vRealize Log Insight user interface.

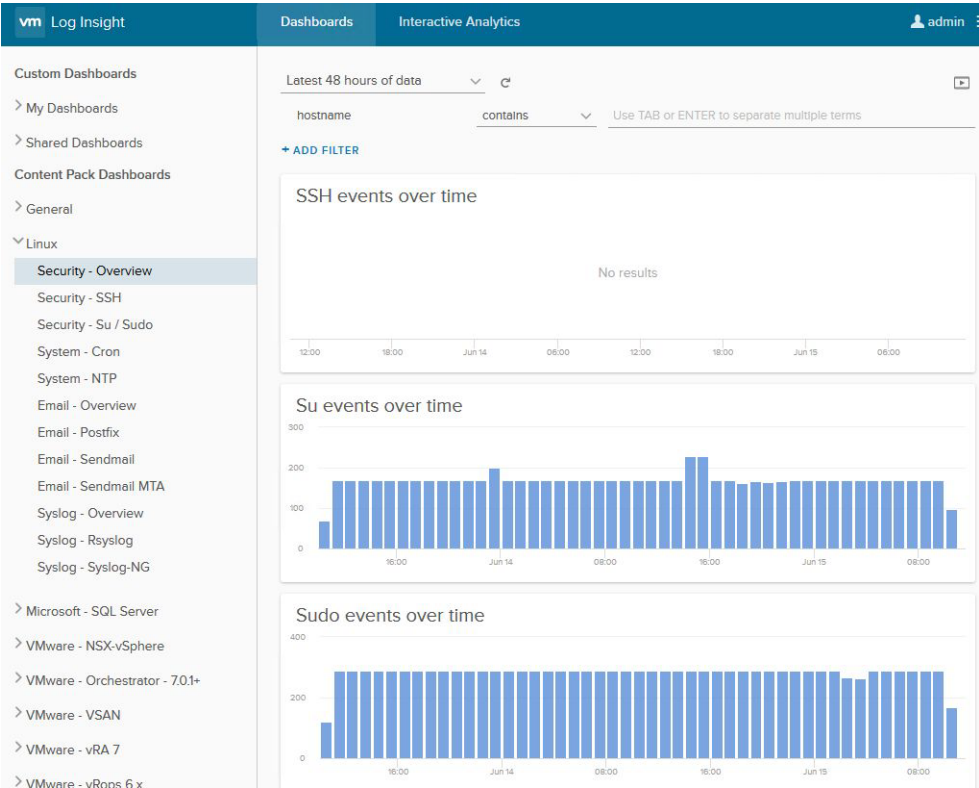

- a Click the configuration drop-down menu icon  and select **Administration**.
 - b Under Management, click **Agents**.
 - c From the drop-down at the top, select **Linux** from the Available Templates section.
 - d Click **Copy Template**.
 - e In the Copy Agent Group dialog box, enter **vAppliances – Agent Group** in the **Name** text box and click **Copy**.

- f In the agent filter fields, use the following selections.

Press ENTER to separate the host name values.

| Filter | Operator | Values |
|----------|----------|---------------------------------------|
| Hostname | matches | ■ vrops01svr01a.rainpole.local |
| | | ■ vrops01svr01b.rainpole.local |
| | | ■ vrops01svr01c.rainpole.local |
| | | ■ sfo01vropsc01a.sfo01.rainpole.local |
| | | ■ sfo01vropsc01b.sfo01.rainpole.local |
| | | ■ vra01svr01a.rainpole.local |
| | | ■ vra01svr01b.rainpole.local |
| | | ■ vrb01svr01.rainpole.local |
| | | ■ sfo01vrbc01.sfo01.rainpole.local |
| | | |

- g Click **Refresh** and verify that all the agents listed in the filter appear in the Agents list.
- h Click **Save New Group** at the bottom of the page.
- 4 Verify that log data is showing up on the Linux dashboards.
 - a On the main navigation bar, click **Dashboards**.
 - b Expand Linux and click **Security - Overview**.

Configure Log Retention and Archiving in Region A

Set log retention to one week and archive logs for 90 days according to the *VMware Validated Design Architecture and Design* documentation.

Procedure

- 1 Log in to the vRealize Log Insight user interface.
 - a Open a Web browser and go to **https://sfo01vrli01.sfo01.rainpole.local**.
 - b Log in using the following credentials.

| Setting | Value |
|-----------|---------------------|
| User name | admin |
| Password | vrli_admin_password |

- 2 In the vRealize Log Insight user interface, click the configuration drop-down menu icon  and select **Administration**.

3 Configure retention threshold notification.

Log Insight continually estimates how long data can be retained with the currently available pool of storage.

If the estimation drops below the retention threshold of one week, Log Insight immediately notifies the administrator that the amount of searchable log data is likely to drop.

- a Under Configuration, click **General**.
- b On the General Configuration page, under the Alerts section, select the **Send a notification when capacity drops below** check box next to **Retention Notification Threshold**, and enter a 1-week period in the text box.
- c Click **Save**.

The screenshot shows the VMware Log Insight web interface. The left-hand navigation pane is expanded to the 'Configuration' section, with 'General' selected. The main panel displays the 'General Configuration' settings. Under the 'ALERTS' section, the 'Email System Notifications To' field is set to 'administrator@rainpole.local'. The 'Send HTTP Post System Notifications To' field is set to 'https://sfo01vrlt01.sfo01.rainpole.local'. The 'Retention Notification Threshold' section has a checked box for 'Send a notification when capacity drops below' and a dropdown menu set to '1 weeks'. The 'BROWSER SESSION' section shows a 'Session Timeout' of '30 minutes'. The 'CUSTOMER EXPERIENCE IMPROVEMENT PROGRAM' section has a checked box for 'Join the VMware Customer Experience Improvement Program'. The 'LANGUAGE' section has a toggle for 'Always Use English'. The 'EXPERIMENTAL FEATURES' section has a toggle for 'Enable User Impersonation'. At the bottom of the configuration area are 'SAVE' and 'RESET TO DEFAULTS...' buttons.

4 Configure data archiving.

- a Under Configuration, click **Archiving**.
- b Toggle **Enable Data Archiving** on.
- c In the **Archive Location** text box, enter the path in the form of **nfs://nfs-server-address/V2D_vRLT_MgmtA_400GB** to an NFS partition where logs will be archived.
- d Click **Test** next to the **Archive Location** text box to verify that the share is accessible.
- e Click **Save**.

Region A vSphere Update Manager Download Service Implementation

Install the vSphere Update Manager Download Service (UMDS) on a Linux virtual machine to download and store binaries and metadata in a shared repository in Region A. Connect UMDS to the vSphere Update Manager instance on the Management vCenter Server and on Compute vCenter Server.

Configure PostgreSQL Database on Your Linux-Based Host Operating System for UMDS in Region A

On a virtual machine with Ubuntu 14.04 Long Term Support (LTS) where you plan to install Update Manager Download Service (UMDS), configure a PostgreSQL database instance.

Prerequisites

- Create a virtual machine for UMDS on the management cluster of Region A. See *Virtual Machine Specifications* from the *Planning and Preparation* documentation.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to **https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client**.
 - b Log in using the following credentials.

| Setting | Value |
|-----------|-----------------------------|
| User name | administrator@vsphere.local |
| Password | vsphere_admin_password |

- 2 In the vSphere Web Client, right-click the **sfo01umds01** virtual machine and select **Open Console** to open the remote console to the virtual machine.
- 3 At the command prompt, log in as the svc-umds user using *svc-umds_password*.
- 4 Install Secure Shell (SSH) server, and end the session.

```
sudo apt-get update
sudo apt-get -y install SSH
exit
```

- 5 Log back in to the UMDS virtual machine using Secure Shell (SSH) client and the svc-umds service account credentials.

- 6 Install and start PostgreSQL and its dependencies:

```
sudo apt-get -y install vim perl tar sed psmisc unixodbc postgresql postgresql-contrib odbcc-postgresql
sudo service postgresql start
```

NOTE The installation procedure creates a user account called `postgres` that is associated with the default Postgres role. We'll use the `postgres` account to establish a service account the Update Manager Download Service will use.

- 7 Log in as a PostgreSQL user, and create a database instance and a database user, by running the following commands.

When prompted, enter and confirm the *umds_db_user_password* password.

```
sudo su - postgres
createdb umds_db
createuser -d -e -r umds_db_user -P
```

- 8 Enable password authentication for the database user.

- a Navigate to the folder that contains the PostgreSQL configuration file *pg_hba.conf*.

| Linux system | Default Location |
|--------------|---------------------------------------|
| Ubuntu 14.04 | /etc/postgresql/postgres_version/main |

```
cd /etc/postgresql/postgres_version/main
```

- b In the PostgreSQL configuration file, enable password authentication for the database user by inserting the following line right above *local all all peer*.

You can use the *vi* editor to make and save the changes.

| #TYPE | DATABASE | USER | ADDRESS | METHOD |
|-------|----------------|---------------------|---------|--------|
| local | <i>umds_db</i> | <i>umds_db_user</i> | | md5 |

- c Log out as a PostgreSQL user by running the following command.

```
logout
```

- 9 Configure the PostgreSQL driver and the data source name (DSN) for connection to the UMDS database.

- a Edit the ODBC configuration file.

```
sudo vi /etc/odbcinst.ini
```

- b Replace the file with the following content and save the change using *:wq*.

```
[PostgreSQL]
Description=PostgreSQL ODBC driver (Unicode version)
Driver=/usr/lib/x86_64-linux-gnu/odbc/psqlodbcw.so
Debug=0
CommLog=1
UsageCount=1
```

- c Edit the system file `/etc/odbc.ini`.

```
sudo vi /etc/odbc.ini
```
- d Replace the file with the following content and save the change using `:wq`,

```
[UMDS_DSN]
;DB_TYPE = PostgreSQL
;SERVER_NAME = localhost
;SERVER_PORT = 5432
;TNS_SERVICE = <database_name>
;USER_ID = <database_username>
Driver = PostgreSQL
DSN = UMDS_DSN
ServerName = localhost
PortNumber = 5432
Server = localhost
Port = 5432
UserID = umds_db_user
User = umds_db_user
Database = umds_db
```
- 10 Create a symbolic link between the UMDS and the PostgreSQL by running the following command.

```
ln -s /var/run/postgresql/.s.PGSQL.5432 /tmp/.s.PGSQL.5432
```
- 11 Restart PostgreSQL.

```
sudo service postgresql restart
```

Install UMDS on Ubuntu OS in Region A

After you install the PostgreSQL database on the UMDS virtual machine, install the UMDS software.

Prerequisites

- Verify you have administrative privileges on the UMDS Ubuntu virtual machine.
- Mount the ISO file of the vCenter Server Appliance to the Linux machine.

Procedure

- 1 Log in to the UMDS virtual machine by using a Secure Shell (SSH) client.
 - a Open an SSH connection to `sfo01umdb01.sfo01.rainpole.local`.
 - b Log in using the following credentials.

| Setting | Value |
|-----------|--------------------------------|
| User name | <code>svc-umds</code> |
| Password | <code>svc-umds_password</code> |

- 2 Mount the vCenter Server Appliance ISO to the UMDS virtual machine.

```
sudo mkdir -p /mnt/cdrom
sudo mount /dev/cdrom /mnt/cdrom
```
- 3 Unarchive the `VMware-UMDS-6.5.0-build_number.tar.gz` file:

```
tar -xzf /mnt/cdrom/umds/VMware-UMDS-6.5.0-build_number.tar.gz -C /tmp
```
- 4 Run the UMDS installation script.

```
sudo /tmp/vmware-umds-distrib/vmware-install.pl
```

- 5 Read and accept the EULA.
- 6 Press Enter to install UMDS in the default directory `/usr/local/vmware-umds` and enter **yes** to confirm directory creation.
- 7 Enter the UMDS proxy settings if needed according to the settings of your environment.
- 8 Press Enter to set the default patch location to `/var/lib/vmware-umds` and enter **yes** to confirm directory creation.
- 9 Provide the database details.

| Option | Description |
|--------------------------------------|------------------------------|
| Provide the database DSN | UMDS_DSN |
| Provide the database username | <i>umds_db_user</i> |
| Provide the database password | <i>umds_db_user_password</i> |

- 10 Type **yes** and press Enter to install UMDS.

Set Up the Data to Download with UMDS in Region A

By default UMDS downloads patch binaries, patch metadata, and notifications for hosts. Specify which patch binaries and patch metadata to download with UMDS in Region A.

Procedure

- 1 Log in to the UMDS virtual machine by using a Secure Shell (SSH) client.
 - a Open an SSH connection to `sfo01umds01.sfo01.rainpole.local`.
 - b Log in using the following credentials.

| Setting | Value |
|------------------|--------------------------|
| User name | <i>svc-umds</i> |
| Password | <i>svc-umds_password</i> |

- 2 Navigate to the directory where UMDS is installed.

```
cd /usr/local/vmware-umds/bin
```
- 3 Disable the updates for older hosts and virtual appliances.

```
sudo ./vmware-umds -S -n
sudo ./vmware-umds -S -d embeddedEsx-5.5.0
sudo ./vmware-umds -S -d embeddedEsx-6.0.0
```
- 4 Configure automatic daily downloads by creating a cron job file.

```
cd /etc/cron.daily/
sudo touch umds-download
sudo chmod 755 umds-download
```
- 5 Edit the download command of the cron job.

```
sudo vi umds-download
```
- 6 Add the following lines to the file.

```
#!/bin/sh
/usr/local/vmware-umds/bin/vmware-umds -D
sudo chmod -R 755 /var/lib/vmware-umds
```

- 7 Test the UMDS Download cron job.

```
sudo ./umds-download
```

Install and Configure the UMDS Web Server in Region A

The UMDS server in Region A downloads upgrades, patch binaries, patch metadata, and notifications to a directory that you must share to vSphere Update Manager by using a Web server.

The default folder to which UMDS downloads patch binaries and patch metadata on a Linux machine is `/var/lib/vmware-umds`. You share this folder out to the VUM instances within the region using an Nginx Web server.

Procedure

- 1 Log in to the UMDS virtual machine by using a Secure Shell (SSH) client.
 - a Open an SSH connection to `sfo01umds01.sfo01.rainpole.local`.
 - b Log in using the following credentials.

| Setting | Value |
|-----------|-------------------|
| User name | svc-umds |
| Password | svc-umds_password |

- 2 Install the Nginx Web server with the following command.

```
sudo apt-get -y install nginx
```
- 3 Change the patch repository directory permissions by running the command.

```
sudo chmod -R 755 /var/lib/vmware-umds
```
- 4 Copy the default site configuration for use with the UMDS configuration.

```
sudo cp /etc/nginx/sites-available/default /etc/nginx/sites-available/umds
```
- 5 Edit the new `/etc/nginx/sites-available/umds` site configuration file and replace the `server {}` block with the following text.

```
server {
    listen 80 default_server;
    listen [::]:80 default_server ipv6only=on;

    root /var/lib/vmware-umds;
    index index.html index.htm;

    # Make site accessible from http://localhost/
    server_name localhost sfo01umds01 sfo01umds01.sfo01.rainpole.local;

    location / {
        # First attempt to serve request as file, then
        # as directory, then fall back to displaying a 404.
        try_files $uri $uri/ =404;
        # Uncomment to enable naxsi on this location
        # include /etc/nginx/naxsi.rules
        autoindex on;
    }
}
```

- 6 Disable the existing default site.

```
sudo rm /etc/nginx/sites-enabled/default
```
- 7 Enable the new UMDS site.

```
sudo ln -s /etc/nginx/sites-available/umds /etc/nginx/sites-enabled/
```
- 8 Restart the Nginx Web service to apply the new configuration.

```
sudo service nginx restart
```
- 9 Ensure you can browse the files on the UMDS Web server by opening a Web browser to `http://sfo01umds01.sfo01.rainpole.local`.

Use the UMDS Shared Repository as the Download Source in Update Manager in Region A

Configure Update Manager to use the UMDS shared repository as a source for downloading ESXi patches, extensions, and notifications.

Procedure

- 1 Log in to vCenter Server by using the vSphere Web Client.
 - a Open a Web browser and go to `https://sfo01m01vc01.sfo01.rainpole.local/vsphere-client`.
 - b Log in using the following credentials.

| Setting | Value |
|-----------|-----------------------------|
| User name | administrator@vsphere.local |
| Password | vsphere_admin_password |

- 2 On the Home page of the vSphere Web Client, click the **Update Manager** icon.
- 3 From the **Objects** tab, click the `sfo01m01vc01.sfo01.rainpole.local` vCenter Server for Region A.
 The **Objects** tab also displays all the vCenter Server system to which an Update Manager instance is connected.
- 4 On the **Manage** tab, click **Settings** and select **Download Settings**.
- 5 On the Download sources page, click **Edit**.
 An Edit Download Sources dialog box opens.
- 6 Enter the following setting and click **OK**.

| Setting | Value |
|-------------------------|---|
| Use a shared repository | Selected |
| URL | http://sfo01umds01.sfo01.rainpole.local |

The vSphere Web Client performs validation of the URL.

- 7 In the Download sources page, click **Download Now** to run the download patch definitions.
 Verify that a new task **Download Patch Definition** appears in the Recent Tasks pane and completes successfully.
- 8 Repeat the procedure to configure the `http://sfo01umds01.sfo01.rainpole.local` repository for the `sfo01w01vc01.sfo01.rainpole.local` vCenter Server.
