Check for additions and updates to these release notes.

VMware vRealize Orchestrator Plug-In for vSphere Replication 8.3.1.5 is a minor product patch release that provides important security fixes. The content of the [VMware vRealize Orchestrator Plug-In for vSphere Replication 8.3.1 Release Notes](#) applies to this version as well.

## What's in the Release Notes

These release notes cover the following topics:

- [What's New](#)
- [Installation](#)

## What's New

Updated Apache log4j to version 2.16 to resolve CVE-2021-44228 and CVE-2021-45046. For more information on these vulnerabilities and their impact on VMware products, see [VMSA-2021-0028](#).

## Installation

The Orchestrator Plug-In for vSphere Replication software requires vRealize Orchestrator 8.3, and vSphere Replication 8.3.1.5. For information on installing vRealize Orchestrator, see the [vRealize Orchestrator documentation](#). For information on installing vSphere Replication 8.3.1.5, see [Installing and Setting Up vSphere Replication](#) in the VMware vSphere Replication documentation.

The Orchestrator Plug-In for vSphere Replication software is distributed as Orchestrator application file. Install and configure the plug-in by using the Orchestrator configuration interface. For more information on installing the [VMware vRealize Orchestrator Plug-In for vSphere Replication 8.3.1 Release Notes](#).

**Note:** The vRealize Orchestrator user, which is used to register the vCenter Server sites in vRealize Orchestrator must have the privilege **Sessions.ValidateSession** and the **VRM Administrator** role (or all the privileges of the VRM Administrator role). The user must have the privileges on all vCenter Server instances in the vRealize Orchestrator inventory, otherwise the vRealize Orchestrator Plug-in for vSphere Replication does not populate the vSphere Replication inventory objects in vRealize Orchestrator.
